The World Factbook is prepared by the Central Intelligence Agency for the use of US Government officials, and the style, format, coverage, and content are designed to meet their specific requirements. Information is provided by Antarctic Information Program (National Science Foundation), Armed Forces Medical Intelligence Center (Department of Defense), Bureau of the Census (Department of Commerce), Bureau of Labor Statistics (Department of Labor), Central Intelligence Agency, Council of Managers of National Antarctic Programs, Defense Intelligence Agency (Department of Defense), Department of Energy, Department of State, Fish and Wildlife Service (Department of the Interior), Maritime Administration (Department of Transportation), National Geospatial-Intelligence Agency (Department of Defense), Naval Facilities Engineering Command (Department of Defense), Office of Insular Affairs (Department of the Interior), Office of Naval Intelligence (Department of Defense), US Board on Geographic Names (Department of the Interior), US Transportation Command (Department of Defense), Oil & Gas Journal, and other public and private sources.

The *Factbook* is in the public domain. Accordingly, it may be copied freely without permission of the Central Intelligence Agency (CIA). The official seal of the CIA, however, may **NOT** be copied without permission as required by the CIA Act of 1949 (50 U.S.C. section 403m). Misuse of the official seal of the CIA could result in civil and criminal penalties.

*The Intelligence Cycle is the process by which information is acquired, converted into intelligence, and made available to policymakers. **Information** is raw data from any source, data that may be fragmentary, contradictory, unreliable, ambiguous, deceptive, or wrong. **Intelligence** is information that has been collected, integrated, evaluated, analyzed, and interpreted. **Finished intelligence** is the final product of the Intelligence Cycle ready to be delivered to the policymaker.*

The three types of finished intelligence are: basic, current, and estimative. Basic intelligence provides the fundamental and factual reference material on a country or issue. Current intelligence reports on new developments. Estimative intelligence judges probable outcomes. The three are mutually supportive: basic intelligence is the foundation on which the other two are constructed; current intelligence continually updates the inventory of knowledge; and estimative intelligence revises overall interpretations of country and issue prospects for guidance of basic and current intelligence. *The World Factbook, The President's Daily Brief, and the National Intelligence Estimates* are examples of the three types of finished intelligence.

The United States has carried on foreign intelligence activities since the days of George Washington but only since World War II have they been coordinated on a government-wide basis. Three programs have highlighted the development of coordinated basic intelligence since that time: (1) *the Joint Army Navy Intelligence Studies (JANIS)*, (2) *the National Intelligence Survey (NIS)*, and (3) *The World Factbook*.

During World War II, intelligence consumers realized that the production of basic intelligence by different components of the US Government resulted in a great duplication of effort and conflicting information. The Japanese attack on Pearl Harbor in 1941 brought home to leaders in Congress and the executive branch the need for integrating departmental reports to national policymakers. Detailed and coordinated information was needed not only on such major

powers as Germany and Japan, but also on places of little previous interest. In the Pacific Theater, for example, the Navy and Marines had to launch amphibious operations against many islands about which information was unconfirmed or nonexistent. Intelligence authorities resolved that the United States should never again be caught unprepared.

In 1943, Gen. George B. Strong (G-2), Adm. H. C. Train (Office of Naval Intelligence—ONI), and Gen. William J. Donovan (Director of the Office of Strategic Services—OSS) decided that a joint effort should be initiated. A steering committee was appointed on 27 April 1943 that recommended the formation of a Joint Intelligence Study Publishing Board to assemble, edit, coordinate, and publish the *Joint Army Navy Intelligence Studies* (JANIS). JANIS was the first interdepartmental basic intelligence program to fulfill the needs of the US Government for an authoritative and coordinated appraisal of strategic basic intelligence. Between April 1943 and July 1947, the board published 34 JANIS studies. JANIS performed well in the war effort, and numerous letters of commendation were received, including a statement from Adm. Forrest Sherman, Chief of Staff, Pacific Ocean Areas, which said, “JANIS has become the indispensable reference work for the shore-based planners.”

The need for more comprehensive basic intelligence in the postwar world was well expressed in 1946 by George S. Pettee, a noted author on national security. He wrote in *The Future of American Secret Intelligence* (Infantry Journal Press, 1946, page 46) that world leadership in peace requires even more elaborate intelligence than in war. “The conduct of peace involves all countries, all human activities—not just the enemy and his war production.”

The Central Intelligence Agency was established on 26 July 1947 and officially began operating on 18 September 1947. Effective 1 October 1947, the Director of Central Intelligence assumed operational responsibility for JANIS. On 13 January 1948, the National Security Council issued Intelligence Directive (NSCID) No. 3, which authorized the *National Intelligence Survey* (NIS) program as a peacetime replacement for the wartime JANIS program. Before adequate NIS country sections could be produced, government agencies had to develop more comprehensive gazetteers and better maps. The US Board on Geographic Names (BGN) compiled the names; the Department of the Interior produced the gazetteers; and CIA produced the maps.

The Hoover Commission’s Clark Committee, set up in 1954 to study

the structure and administration of the CIA, reported to Congress in 1955 that: "The National Intelligence Survey is an invaluable publication which provides the essential elements of basic intelligence on all areas of the world. There will always be a continuing requirement for keeping the Survey up-to-date." The *Factbook* was created as an annual summary and update to the encyclopedic NIS studies. The first classified *Factbook* was published in August 1962, and the first unclassified version was published in June 1971. The NIS program was terminated in 1973 except for the *Factbook*, map, and gazetteer components. The 1975 *Factbook* was the first to be made available to the public with sales through the US Government Printing Office (GPO). The *Factbook* was first made available on the Internet in June 1997. The year 2010 marks the 63th anniversary of the establishment of the Central Intelligence Agency and the 67th year of continuous basic intelligence support to the US Government by *The World Factbook* and its two predecessor programs.

The Evolution of The World Factbook

National Basic Intelligence Factbook produced semiannually until 1980. Country entries include sections on Land, Water, People, Government, Economy, Communications, and Defense Forces.

1981—Publication becomes an annual product and is renamed *The World Factbook*. A total of 165 nations are covered on 225 pages.

1983—Appendices (Conversion Factors, International Organizations) first introduced.

1984—Appendices expanded; now include: A. The United Nations, B. Selected United Nations Organizations, C. Selected International Organizations, D. Country Membership in Selected Organizations, E. Conversion Factors.

1987—A new Geography section replaces the former separate Land and Water sections. UN Organizations and Selected International Organizations appendices merged into a new International Organizations appendix. First multi-color-cover *Factbook*.

1988—More than 40 new geographic entities added to provide complete world coverage without overlap or omission. Among the new entities are Antarctica, oceans (Arctic, Atlantic, Indian, Pacific), and the World. The front-of-the-book explanatory introduction expanded and retitled to Notes, Definitions, and Abbreviations. Two new Appendices added: Weights and Measures (in place of Conversion

Factors) and a Cross-Reference List of Geographic Names. *Factbook* size reaches 300 pages.

1989—Economy section completely revised and now includes an Overview briefly describing a country's economy. New entries added under People, Government, and Communications.

1990—The Government section revised and considerably expanded with new entries.

1991—A new International Organizations and Groups appendix added. *Factbook* size reaches 405 pages.

1992—Twenty new successor state entries replace those of the Soviet Union and Yugoslavia. New countries are respectively: Armenia, Azerbaijan, Belarus, Estonia, Georgia, Kazakhstan, Kyrgyzstan, Latvia, Lithuania, Moldova, Russia, Tajikistan, Turkmenistan, Ukraine, Uzbekistan; and Bosnia and Hercegovina, Croatia, Macedonia, Serbia and Montenegro, Slovenia. Number of nations in the *Factbook* rises to 188.

1993—Czechoslovakia's split necessitates new Czech Republic and Slovakia entries. New Eritrea entry added after it secedes from Ethiopia. Substantial enhancements made to Geography section.

1994—Two new appendices address Selected International Environmental Agreements. The gross domestic product (GDP) of most developing countries changed to a purchasing power parity (PPP) basis rather than an exchange rate basis. *Factbook* size up to 512 pages.

1995—The GDP of all countries now presented on a PPP basis. New appendix lists estimates of GDP on an exchange rate basis. Communications category split; Railroads, Highways, Inland waterways, Pipelines, Merchant marine, and Airports entries now make up a new Transportation category. *The World Factbook* is first produced on CD-ROM.

1996—Maps accompanying each entry now present more detail. Flags also introduced for nearly all entities. Various new entries appear under Geography and Communications. *Factbook* abbreviations consolidated into a new Appendix A. Two new appendices present a Cross-Reference List of Country Data Codes and a Cross-Reference List of Hydrogeographic Data Codes. Geographic coordinates added to Appendix H, Cross-Reference List of Geographic Names. *Factbook* size expands by 95 pages in one year to reach 652.

1997—*The World Factbook* introduced onto the Internet. A special printed edition prepared for the CIA's 50th anniversary. A schema or Guide to Country Profiles introduced. New color maps and flags now accompany each country profile. Category headings distinguished by shaded backgrounds. Number of categories expanded to nine with the addition of an Introduction (for only a few countries) and Transnational Issues (which includes Disputes-international and Illicit drugs).

1998—The Introduction category with two entries, Current issues and Historical perspective, expanded to more countries. Last year for the production of CD-ROM versions of the *Factbook*.

1999—Historical perspective and Current issues entries in the Introduction category combined into a new Background statement. Several new Economy entries introduced. A new physical map of the world added to the back-of-the-book reference maps.

2000—A new "country profile" added on the Southern Ocean. The Background statements dramatically expanded to over 200 countries and possessions. A number of new Communications entries added.

2001—Background entries completed for all 267 entities in the *Factbook*. Several new HIV/AIDS entries introduced under the People category. Revision begun on individual country maps to include elevation extremes and a partial geographic grid. Weights and Measures appendix deleted.

2002—New entry on Distribution of Family income—Gini index added. Revision of individual country maps continued (process still ongoing).

2003—In the Economy category, petroleum entries added for oil production, consumption, exports, imports, and proved reserves, as well as natural gas proved reserves.

2004—Bi-weekly updates launched on *The World Factbook* website. Additional petroleum entries included for natural gas production, consumption, exports, and imports. In the Transportation category, under Merchant marine, subfields added for foreign-owned vessels and those registered in other countries. Descriptions of the many forms of government mentioned in the *Factbook* incorporated into the Definitions and Notes.

2005—In the People category, a Major infectious diseases field added for countries deemed to pose a higher risk for travelers. In the

Economy category, entries included for Current account balance, Investment, Public debt, and Reserves of foreign exchange and gold. The Transnational issues category expanded to include Refugees and internally displaced persons. Size of the printed *Factbook* reaches 702 pages.

2006—In the Economy category, national GDP figures now presented at Official Exchange Rates (OER) in addition to GDP at purchasing power parity (PPP). Entries in the Transportation section reordered; Highways changed to Roadways, and Ports and harbors to Ports and terminals.

2007—In the Government category, the Capital entry significantly expanded with up to four subfields, including new information having to do with time. The subfields consist of the name of the capital itself, its geographic coordinates, the time difference at the capital from coordinated universal time (UTC), and, if applicable, information on daylight saving time (DST). Where appropriate, a special note is added to highlight those countries with multiple time zones. A Trafficking in persons entry added to the Transnational issues category. A new appendix, Weights and Measures, (re)introduced to the online version of the *Factbook*.

2008—In the Geography category, two fields focus on the increasingly vital resource of water: Total renewable water resources and Freshwater withdrawal. In the Economy category, three fields added for: Stock of direct foreign investment—at home, Stock of direct foreign investment—abroad, and Market value of publicly traded shares. Concise descriptions of all major religions included in the Definitions and Notes. Responsibility for printing of *The World Factbook* turned over to the Government Printing Office.

2009—The online *Factbook* site completely redesigned with many new features. In the People category, two new fields provide information on education in terms of opportunity and resources: School Life Expectancy and Education expenditures. Additionally, the Urbanization entry expanded to include all countries. In the Economy category, five fields added: Central bank discount rate, Commercial bank prime lending rate, Stock of narrow money, Stock of broad money, and Stock of domestic credit.

2010—Weekly updates inaugurated on the *The World Factbook* website. The dissolution of the Netherlands Antilles results in two new listings: Curacao and Sint Maarten. In the Communications category, a Broadcast media field replaces the former Radio broadcast stations

and TV broadcast stations entries. In the Geography section, under Natural hazards, a Volcanism subfield added for countries with historically active volcanoes. In the Government category, a new National anthems field introduced. Concise descriptions of all major Legal systems incorporated into the Definitions and Notes. In order to facilitate comparisons over time, dozens of the entries in the Economy category expanded to include two (and in some cases three) years' worth of data.

2011—The People section expanded to People and Society, incorporating ten new fields. The Economy category added Taxes and other revenues and Budget surplus (+) or deficit (–), while the Government section introduced International law organization participation and National symbols. A new African nation, South Sudan, brings the total number of countries in *The World Factbook* to 195.

2012—A new Energy category introduced with 23 energy-related fields. Several distinctive features added to *The World Factbook* website: 1) playable audio files in the Government section for the National Anthems entry, 2) online graphics in the form of a Population Pyramid feature in the People and Society category's Age Structure field, and 3) a Users Guide enabling visitors to navigate the *Factbook* more easily and efficiently. A new and distinctive Map of the World Oceans highlights an expanded array of regional and country maps. Size of the printed *Factbook*'s 50th anniversary edition reaches 847 pages.

2013—In the People and Society section five fields introduced: Demographic profile, Mother's mean age at first birth, Contraceptive prevalence rate, Dependency ratios, and Child labor—children ages 5–14. In the Transnational Issues category, a new *stateless persons* subfield embedded under the Refugees and internally displaced persons entry. In the Economy section two fields added: GDP—composition by end use and Gross national saving. In the Government category the Judicial branch entry revised and expanded to include three new subfields: *highest court(s)*, *judge selection and term of office*, and *subordinate courts*.

Abbreviations This information is included in **Appendix A: Abbreviations**, which includes all abbreviations and acronyms used in the *Factbook*, with their expansions.

Acronyms An acronym is an abbreviation coined from the initial letter of each successive word in a term or phrase. In general, an acronym made up solely from the first letter of the major words in the expanded form is rendered in all capital letters (NATO from North Atlantic Treaty Organization; an exception would be ASEAN for Association of Southeast Asian Nations). In general, an acronym made up of more than the first letter of the major words in the expanded form is rendered with only an initial capital letter (Comsat from Communications Satellite Corporation; an exception would be NAM from Nonaligned Movement). Hybrid forms are sometimes used to distinguish between initially identical terms (ICC for International Chamber of Commerce and ICCT for International Criminal Court).

Administrative divisions This entry generally gives the numbers, designatory terms, and first-order administrative divisions as approved by the US Board on Geographic Names (BGN). Changes that have been reported but not yet acted on by the BGN are noted.

Age structure This entry provides the distribution of the population according to age. Information is included by sex and age group as follows: *0-14 years (children)*, *15-24 years (early working age)*, *25-54 years (prime working age)*, *55-64 years (mature working age)*, *65 years and over (elderly)*. The age structure of a population affects a nation's key socioeconomic issues. Countries with young populations (high percentage under age 15) need to invest more in schools, while countries with older populations (high percentage ages 65 and over) need to invest more in the health sector. The age structure can also be used to help predict potential political issues. For example, the rapid growth of a young adult population unable to find employment can lead to unrest.

Agriculture—products This entry is an ordered listing of major crops and products starting with the most important.

Airports This entry gives the total number of airports or airfields recognizable from the air. The runway(s) may be paved (concrete or asphalt surfaces) or unpaved (grass, earth, sand, or gravel surfaces) and may include closed or abandoned installations. Airports or airfields that are no longer recognizable (overgrown, no facilities, etc.) are not included. Note that not all airports have accommodations for refueling, maintenance, or air traffic control.

Airports—with paved runways This entry gives the total number of airports with paved runways (concrete or asphalt surfaces) by length. For airports with more than one runway, only the longest runway is included according to the following five groups— (1) *over 3,047 m* (over 10,000 ft), (2) *2,438 to 3,047 m* (8,000 to 10,000 ft), (3) *1,524 to 2,437 m* (5,000 to 8,000 ft), (4) *914 to 1,523 m* (3,000 to 5,000 ft), and (5) *under 914 m* (under 3,000 ft). Only airports with usable runways are included in this listing. Not all airports have facilities for refueling, maintenance, or air traffic control. The type aircraft capable of operating from a runway of a given length is dependent upon a number of factors including elevation of the runway, runway gradient, average maximum daily temperature at the airport, engine types, flap settings, and take-off weight of the aircraft.

Airports—with unpaved runways This entry gives the total number of airports with unpaved runways (grass, dirt, sand, or gravel surfaces) by length. For airports with more than one runway, only the longest runway is included according to the following five groups—(1) *over 3,047 m* (over 10,000 ft), (2) *2,438 to 3,047 m* (8,000 to 10,000 ft), (3) *1,524 to 2,437 m* (5,000 to 8,000 ft), (4) *914 to 1,523 m* (3,000 to 5,000 ft), and (5) *under 914 m* (under 3,000 ft). Only airports with usable runways are included in this listing. Not all airports have facilities for refueling, maintenance, or air traffic control. The type aircraft capable of operating from a runway of a given length is dependent upon a number of factors including elevation of the runway, runway gradient, average maximum daily temperature at the airport, engine types, flap settings, and take-off weight of the aircraft.

Appendixes This section includes *Factbook*-related material by topic.

Area This entry includes three subfields. *Total area* is the sum of all land and water areas delimited by international boundaries and/or

coastlines. *Land area* is the aggregate of all surfaces delimited by international boundaries and/or coastlines, excluding inland water bodies (lakes, reservoirs, rivers). *Water area* is the sum of the surfaces of all inland water bodies, such as lakes, reservoirs, or rivers, as delimited by international boundaries and/or coastlines.

Area—comparative This entry provides an area comparison based on total area equivalents. Most entities are compared with the entire US or one of the 50 states based on area measurements (1990 revised) provided by the US Bureau of the Census. The smaller entities are compared with Washington, DC (178 sq km, 69 sq mi) or The Mall in Washington, DC (0.59 sq km, 0.23 sq mi, 146 acres).

Background This entry usually highlights major historic events and current issues and may include a statement about one or two key future trends.

Birth rate This entry gives the average annual number of births during a year per 1,000 persons in the population at midyear; also known as crude birth rate. The birth rate is usually the dominant factor in determining the rate of population growth. It depends on both the level of fertility and the age structure of the population.

Broadcast media This entry provides information on the approximate number of public and private TV and radio stations in a country, as well as basic information on the availability of satellite and cable TV services.

Budget This entry includes *revenues*, *expenditures*, and capital expenditures. These figures are calculated on an exchange rate basis, i.e., not in purchasing power parity (PPP) terms.

Budget surplus (+) or deficit (–) This entry records the difference between national government revenues and expenditures, expressed as a percent of GDP. A positive (+) number indicates that revenues exceeded expenditures (a budget surplus), while a negative (–) number indicates the reverse (a budget deficit). Normalizing the data, by dividing the budget balance by GDP, enables easy comparisons across countries and indicates whether a national government saves or borrows money. Countries with high budget deficits (relative to their GDPs) generally have more difficulty raising funds to finance expenditures, than those with lower deficits.

Capital This entry gives the *name* of the seat of government, its *geographic coordinates*, the *time difference* relative to **Coordinated Universal Time (UTC)** and the time observed in Washington, DC,

and, if applicable, information on *daylight saving time (DST)*. Where appropriate, a special note has been added to highlight those countries that have multiple time zones.

Carbon dioxide emissions from consumption of energy This entry is the total amount of carbon dioxide, measured in metric tons, released by burning fossil fuels in the process of producing and consuming energy.

Central bank discount rate This entry provides the annualized interest rate a country's central bank charges commercial, depository banks for loans to meet temporary shortages of funds.

Child labor—children ages 5–14 This entry gives the percent of children aged 5-14 (or the age range specified) engaged in child labor. We define “child labor” as work that deprives children of their childhood, their potential, and their dignity, and that is harmful to physical and mental development. It refers to work that is mentally, physically, socially, or morally dangerous and harmful to children. Such labor may deprive them of the opportunity to attend school, oblige them to leave school prematurely, or require them to combine school attendance with excessively long and heavy work. In its most extreme forms, child labor involves children being enslaved, separated from their families, exposed to serious hazards and illnesses, and/or left to fend for themselves on the streets of large cities—often a very early age.

Children under the age of 5 years underweight This entry gives the percent of children under five considered to be underweight. Underweight means weight-for-age is approximately 2 kg below for standard at age one, 3 kg below standard for ages two and three, and 4 kg below standard for ages four and five. This statistic is an indicator of the nutritional status of a community. Children who suffer from growth retardation as a result of poor diets and/or recurrent infections tend to have a greater risk of suffering illness and death.

Climate This entry includes a brief description of typical weather regimes throughout the year.

Coastline This entry gives the total length of the boundary between the land area (including islands) and the sea.

Commercial bank prime lending rate This entry provides a simple average of annualized interest rates commercial banks charge on new loans, denominated in the national currency, to

their most credit-worthy customers.

Communications This category deals with the means of exchanging information and includes the telephone, radio, television, and Internet host entries.

Communications—note This entry includes miscellaneous communications information of significance not included elsewhere.

Constitution This entry provides information on a country's constitution. It includes the dates of previous constitutions, the dates of the main steps in making and implementing the latest constitution, and the dates of amendments. For countries with 1-3 previous constitutions, the years are listed; for those with 4-9 previous, the entry is listed as "several previous," and for those with 10 or more, the entry is "many previous." Amendment entries are treated in the same manner, and include the date(s) of the last amendment(s).

The main steps in creating a constitution and amending it usually include drafting, legislative and/or executive branch review and approval, public referendum, and entry into law. In many countries this process is lengthy. Terms commonly used to describe constitutional changes are "amended," "revised," or "reformed." In countries such as South Korea and Turkmenistan, sources differ as to whether changes are stated as new constitutions or are amendments/revisions to existing ones.

A few countries including Canada, Israel, and UK have no single constitution document, but have various written and unwritten acts, statutes, common laws, and practices that, when taken together, describe a body of fundamental principles or established precedents as to how their countries are governed. Countries including Hong Kong, Macau, Oman, and Saudi Arabia use the term "basic law" instead of constitution.

A number of self-governing dependencies and territories such as the Cayman Islands, Bermuda, and Gibraltar (UK), Greenland and Faroe Islands (Denmark), Aruba, Curacao, and Sint Maarten (Netherlands), and Puerto Rico and the Virgin Islands (US) have their own country-level constitutions.

Contraceptive prevalence rate This field gives the percent of women of reproductive age (15-49) who are married or in union and are using, or whose sexual partner is using, a method of contraception according to the date of the most recent available data. The contraceptive prevalence rate is an indicator of health services, development, and women's empowerment. It is also useful in

understanding, past, present, and future fertility trends, especially in developing countries.

Coordinated Universal Time (UTC) UTC is the international atomic time scale that serves as the basis of timekeeping for most of the world. The hours, minutes, and seconds expressed by UTC represent the time of day at the Prime Meridian (0° longitude) located near Greenwich, England as reckoned from midnight. UTC is calculated by the Bureau International des Poids et Mesures (BIPM) in Sevres, France. The BIPM averages data collected from more than 200 atomic time and frequency standards located at about 50 laboratories worldwide. UTC is the basis for all civil time with the Earth divided into time zones expressed as positive or negative differences from UTC. UTC is also referred to as “Zulu time.” See the Standard Time Zones of the World map included with the **Reference Maps**.

Country data codes See **Data codes**.

Country map Most versions of the *Factbook* provide a country map in color. The maps were produced from the best information available at the time of preparation. Names and/or boundaries may have changed subsequently.

Country name This entry includes all forms of the country’s name approved by the US Board on Geographic Names (Italy is used as an example): *conventional long form* (Italian Republic), *conventional short form* (Italy), *local long form* (Repubblica Italiana), *local short form* (Italia), *former* (Kingdom of Italy), as well as the *abbreviation*. Also see the **Terminology** note.

Crude oil—exports This entry is the total amount of crude oil exported, in barrels per day (bbl/day).

Crude oil—imports This entry is the total amount of crude oil imported, in barrels per day (bbl/day).

Crude oil—production This entry is the total amount of crude oil produced, in barrels per day (bbl/day).

Crude oil—proved reserves This entry is the stock of proved reserves of crude oil, in barrels (bbl). Proved reserves are those quantities of petroleum which, by analysis of geological and engineering data, can be estimated with a high degree of confidence to be commercially recoverable from a given date forward, from known reservoirs and under current economic conditions.

Current account balance This entry records a country's net trade in goods and services, plus net earnings from rents, interest, profits, and dividends, and net transfer payments (such as pension funds and worker remittances) to and from the rest of the world during the period specified. These figures are calculated on an exchange rate basis, i.e., not in purchasing power parity (PPP) terms.

Data codes This information is presented in **Appendix D: Cross-Reference List of Country Data Codes** and **Appendix E: Cross-Reference List of Hydrographic Data Codes**.

Date of information In general, information available as of January in a given year is used in the preparation of the printed edition.

Daylight Saving Time (DST) This entry is included for those entities that have adopted a policy of adjusting the official local time forward, usually one hour, from Standard Time during summer months. Such policies are most common in mid-latitude regions.

Death rate This entry gives the average annual number of deaths during a year per 1,000 population at midyear; also known as crude death rate. The death rate, while only a rough indicator of the mortality situation in a country, accurately indicates the current mortality impact on population growth. This indicator is significantly affected by age distribution, and most countries will eventually show a rise in the overall death rate, in spite of continued decline in mortality at all ages, as declining fertility results in an aging population.

Debt—external This entry gives the total public and private debt owed to nonresidents repayable in internationally accepted currencies, goods, or services. These figures are calculated on an exchange rate basis, i.e., not in purchasing power parity (PPP) terms.

Demographic profile This entry describes a country's key demographic features and trends and how they vary among regional, ethnic, and socioeconomic sub-populations. Some of the topics addressed are population age structure, fertility, health, mortality, poverty, education, and migration.

Dependency ratios Dependency ratios are a measure of the age structure of a population. They relate the number of individuals that are likely to be economically "dependent" on the support of others. Dependency ratios contrast the ratio of youths (ages 0-14) and the elderly (ages 65+) to the number of those in the working-age group (ages 15-64). Changes in the dependency ratio provide an indication of

potential social support requirements resulting from changes in population age structures. As fertility levels decline, the dependency ratio initially falls because the proportion of youths decreases while the proportion of the population of working age increases. As fertility levels continue to decline, dependency ratios eventually increase because the proportion of the population of working age starts to decline and the proportion of elderly persons continues to increase.

total dependency ratio—The total dependency ratio is the ratio of combined youth population (ages 0-14) and elderly population (ages 65+) per 100 people of working age (ages 15-64). A high total dependency ratio indicates that the working-age population and the overall economy face a greater burden to support and provide social services for youth and elderly persons, who are often economically dependent.

youth dependency ratio—The youth dependency ratio is the ratio of the youth population (ages 0-14) per 100 people of working age (ages 15-64). A high youth dependency ratio indicates that a greater investment needs to be made in schooling and other services for children.

elderly dependency ratio—The elderly dependency ratio is the ratio of the elderly population (ages 65+) per 100 people of working age (ages 15-64). Increases in the elderly dependency ratio put added pressure on governments to fund pensions and healthcare.

potential support ratio—The potential support ratio is the number of working-age people (ages 15-64) per one elderly person (ages 65+). As a population ages, the potential support ratio tends to fall, meaning there are fewer potential workers to support the elderly.

Dependency status This entry describes the formal relationship between a particular nonindependent entity and an independent state.

Dependent areas This entry contains an alphabetical listing of all nonindependent entities associated in some way with a particular independent state.

Diplomatic representation The US Government has diplomatic relations with 190 independent states, including 188 of the 193 UN members (excluded UN members are Bhutan, Cuba, Iran, North Korea, and the US itself). In addition, the US has diplomatic relations with 2 independent states that are not in the UN, the Holy See and Kosovo, as well as with the EU.

Diplomatic representation from the US This entry

includes the *chief of mission*, *embassy address*, *mailing address*, *telephone number*, *FAX number*, *branch office locations*, *consulate general locations*, and *consulate locations*.

Diplomatic representation in the US This entry includes the *chief of mission*, *chancery address*, *telephone*, *FAX*, *consulate general locations*, and *consulate locations*. The use of the annotated title Appointed Ambassador refers to a new ambassador who has presented his/her credentials to the secretary of state but not the US president. Such ambassadors fulfill all diplomatic functions except meeting with or appearing at functions attended by the president until such time as they formally present their credentials at a White House ceremony.

Disputes—international This entry includes a wide variety of situations that range from traditional bilateral boundary disputes to unilateral claims of one sort or another. Information regarding disputes over international terrestrial and maritime boundaries has been reviewed by the US Department of State. References to other situations involving borders or frontiers may also be included, such as resource disputes, geopolitical questions, or irredentist issues; however, inclusion does not necessarily constitute official acceptance or recognition by the US Government.

Distribution of family income—Gini index This index measures the degree of inequality in the distribution of family income in a country. The index is calculated from the Lorenz curve, in which cumulative family income is plotted against the number of families arranged from the poorest to the richest. The index is the ratio of (a) the area between a country's Lorenz curve and the 45 degree helping line to (b) the entire triangular area under the 45 degree line. The more nearly equal a country's income distribution, the closer its Lorenz curve to the 45 degree line and the lower its Gini index, e.g., a Scandinavian country with an index of 25. The more unequal a country's income distribution, the farther its Lorenz curve from the 45 degree line and the higher its Gini index, e.g., a Sub-Saharan country with an index of 50. If income were distributed with perfect equality, the Lorenz curve would coincide with the 45 degree line and the index would be zero; if income were distributed with perfect inequality, the Lorenz curve would coincide with the horizontal axis and the right vertical axis and the index would be 100.

Drinking water source This entry provides information about access to improved or unimproved drinking water sources available to segments of the population of a country. *improved* drinking water—use of any of the following sources: piped water into dwelling, yard, or

plot; public tap or standpipe; tubewell or borehole; protected dug well; protected spring; or rainwater collection. *Unimproved* drinking water—use of any of the following sources: unprotected dug well; unprotected spring; cart with small tank or drum; tanker truck; surface water, which includes rivers, dams, lakes, ponds, streams, canals or irrigation channels; or bottled water.

Economy This category includes the entries dealing with the size, development, and management of productive resources, i.e., land, labor, and capital.

Economy—overview This entry briefly describes the type of economy, including the degree of market orientation, the level of economic development, the most important natural resources, and the unique areas of specialization. It also characterizes major economic events and policy changes in the most recent 12 months and may include a statement about one or two key future macroeconomic trends.

Education expenditures This entry provides the public expenditure on education as a percent of GDP.

Electricity—consumption This entry consists of total electricity generated annually plus imports and minus exports, expressed in kilowatt-hours. The discrepancy between the amount of electricity generated and/or imported and the amount consumed and/or exported is accounted for as loss in transmission and distribution.

Electricity—exports This entry is the total exported electricity in kilowatt-hours.

Electricity—from fossil fuels This entry measures the capacity of plants that generate electricity by burning fossil fuels (such as coal, petroleum products, and natural gas), expressed as a share of the country's total generating capacity.

Electricity—from hydroelectric plants This entry measures the capacity of plants that generate electricity by water-driven turbines, expressed as a share of the country's total generating capacity.

Electricity—from nuclear fuels This entry measures the capacity of plants that generate electricity through radioactive decay of nuclear fuel, expressed as a share of the country's total generating capacity.

Electricity—from other renewable sources This entry measures the capacity of plants that generate electricity by using renewable energy sources other than hydroelectric (including, for example, wind, waves, solar, and geothermal), expressed as a share of the country's total generating capacity.

Electricity—imports This entry is the total imported electricity in kilowatt-hours.

Electricity—installed generating capacity This entry is the total capacity of currently installed generators, expressed in kilowatts (kW), to produce electricity. A 10-kilowatt (kW) generator will produce 10 kilowatt hours (kWh) of electricity, if it runs continuously for one hour.

Electricity—production This entry is the annual electricity generated expressed in kilowatt-hours. The discrepancy between the amount of electricity generated and/or imported and the amount consumed and/or exported is accounted for as loss in transmission and distribution.

Elevation extremes This entry includes both the highest point and the lowest point.

Energy This category includes entries dealing with the production, consumption, import, and export of various forms of energy including electricity, crude oil, refined petroleum products, and natural gas.

Entities Some of the independent states, dependencies, areas of special sovereignty, and governments included in this publication are not independent, and others are not officially recognized by the US Government. "Independent state" refers to a people politically organized into a sovereign state with a definite territory. "Dependencies" and "areas of special sovereignty" refer to a broad category of political entities that are associated in some way with an independent state. "Country" names used in the table of contents or for page headings are usually the short-form names as approved by the US Board on Geographic Names and may include independent states, dependencies, and areas of special sovereignty, or other geographic entities. There are a total of 267 separate geographic entities in The World Factbook that may be categorized as follows:

Environment—current issues This entry lists the most pressing and important environmental problems. The following terms and abbreviations are used throughout the entry:

Acidification—the lowering of soil and water pH due to acid precipitation and deposition usually through precipitation; this process disrupts ecosystem nutrient flows and may kill freshwater fish and plants dependent on more neutral or alkaline conditions (see acid rain).

Acid rain—characterized as containing harmful levels of sulfur dioxide or nitrogen oxide; acid rain is damaging and potentially deadly to the earth's fragile ecosystems; acidity is measured using the pH scale where 7 is neutral, values greater than 7 are considered alkaline, and values below 5.6 are considered acid precipitation; note—a pH of 2.4 (the acidity of vinegar) has been measured in rainfall in New England.

Aerosol—a collection of airborne particles dispersed in a gas, smoke, or fog.

Afforestation—converting a bare or agricultural space by planting trees and plants; reforestation involves replanting trees on areas that have been cut or destroyed by fire.

Asbestos—a naturally occurring soft fibrous mineral commonly used in fireproofing materials and considered to be highly carcinogenic in particulate form.

Biodiversity—also biological diversity; the relative number of species, diverse in form and function, at the genetic, organism, community, and ecosystem level; loss of biodiversity reduces an ecosystem's ability to recover from natural or man-induced disruption.

Bio-indicators—a plant or animal species whose presence, abundance, and health reveal the general condition of its habitat.

Biomass—the total weight or volume of living matter in a given area or volume.

Carbon cycle—the term used to describe the exchange of carbon (in various forms, e.g., as carbon dioxide) between the atmosphere, ocean, terrestrial biosphere, and geological deposits.

Catchments—assemblages used to capture and retain rainwater and runoff; an important water management technique in areas with limited freshwater resources, such as Gibraltar.

DDT (dichloro-diphenyl-trichloro-ethane)—a colorless, odorless insecticide that has toxic effects on most animals; the use of DDT was banned in the US in 1972.

Defoliants—chemicals which cause plants to lose their leaves artificially; often used in agricultural practices for weed control, and may have detrimental impacts on human and ecosystem health.

Deforestation—the destruction of vast areas of forest (e.g., unsustainable forestry practices, agricultural and range land clearing, and the over exploitation of wood products for use as fuel) without planting new growth.

Desertification—the spread of desert-like conditions in arid or semi-arid areas, due to overgrazing, loss of agriculturally productive soils, or climate change.

Dredging—the practice of deepening an existing waterway; also, a technique used for collecting bottom-dwelling marine organisms (e.g., shellfish) or harvesting coral, often causing significant destruction of reef and ocean-floor ecosystems.

Drift-net fishing—done with a net, miles in extent, that is generally anchored to a boat and left to float with the tide; often results in an over harvesting and waste of large populations of non-commercial marine species (by-catch) by its effect of “sweeping the ocean clean.”

Ecosystems—ecological units comprised of complex communities

of organisms and their specific environments.

Effluents—waste materials, such as smoke, sewage, or industrial waste which are released into the environment, subsequently polluting it.

Endangered species—a species that is threatened with extinction either by direct hunting or habitat destruction.

Freshwater—water with very low soluble mineral content; sources include lakes, streams, rivers, glaciers, and underground aquifers.

Greenhouse gas—a gas that “traps” infrared radiation in the lower atmosphere causing surface warming; water vapor, carbon dioxide, nitrous oxide, methane, hydrofluorocarbons, and ozone are the primary greenhouse gases in the Earth’s atmosphere.

Groundwater—water sources found below the surface of the earth often in naturally occurring reservoirs in permeable rock strata; the source for wells and natural springs.

Highlands Water Project—a series of dams constructed jointly by Lesotho and South Africa to redirect Lesotho’s abundant water supply into a rapidly growing area in South Africa; while it is the largest infrastructure project in southern Africa, it is also the most costly and controversial; objections to the project include claims that it forces people from their homes, submerges farmlands, and squanders economic resources.

Inuit Circumpolar Conference (ICC)—represents the roughly 150,000 Inuits of Alaska, Canada, Greenland, and Russia in international environmental issues; a General Assembly convenes every three years to determine the focus of the ICC; the most current concerns are long-range transport of pollutants, sustainable development, and climate change.

Metallurgical plants—industries which specialize in the science, technology, and processing of metals; these plants produce highly concentrated and toxic wastes which can contribute to pollution of ground water and air when not properly disposed.

Noxious substances—injurious, very harmful to living beings.

Overgrazing—the grazing of animals on plant material faster than it can naturally regrow leading to the permanent loss of plant cover, a common effect of too many animals grazing limited range land.

Ozone shield—a layer of the atmosphere composed of ozone gas (O₃) that resides approximately 25 miles above the Earth’s surface and absorbs solar ultraviolet radiation that can be harmful to living organisms.

Poaching—the illegal killing of animals or fish, a great concern with respect to endangered or threatened species.

Pollution—the contamination of a healthy environment by man-made waste.

Potable water—water that is drinkable, safe to be consumed.

Salination—the process through which fresh (drinkable) water becomes salt (undrinkable) water; hence, desalination is the reverse process; also involves the accumulation of salts in topsoil caused by evaporation of excessive irrigation water, a process that can eventually render soil incapable of supporting crops.

Siltation—occurs when water channels and reservoirs become clotted with silt and mud, a side effect of deforestation and soil erosion.

Slash-and-burn agriculture—a rotating cultivation technique in which trees are cut down and burned in order to clear land for temporary agriculture; the land is used until its productivity declines at which point a new plot is selected and the process repeats; this practice is sustainable while population levels are low and time is permitted for regrowth of natural vegetation; conversely, where these conditions do not exist, the practice can have disastrous consequences for the environment.

Soil degradation—damage to the land's productive capacity because of poor agricultural practices such as the excessive use of pesticides or fertilizers, soil compaction from heavy equipment, or erosion of topsoil, eventually resulting in reduced ability to produce agricultural products.

Soil erosion—the removal of soil by the action of water or wind, compounded by poor agricultural practices, deforestation, overgrazing, and desertification.

Ultraviolet (UV) radiation—a portion of the electromagnetic energy emitted by the sun and naturally filtered in the upper atmosphere by the ozone layer; UV radiation can be harmful to living organisms and has been linked to increasing rates of skin cancer in humans.

Waterborne diseases—those in which bacteria survive in, and are transmitted through, water; always a serious threat in areas with an untreated water supply.

Environment—international agreements This entry separates country participation in international environmental agreements into two levels—*party to* and *signed, but not ratified*. Agreements are listed in alphabetical order by the abbreviated form of the full name.

Environmental agreements This information is presented in **Appendix C: Selected International Environmental Agreements**, which includes the name, abbreviation, date opened for signature, date entered into force, objective, and parties by category.

Ethnic groups This entry provides an ordered listing of ethnic groups starting with the largest and normally includes the percent of total population.

Exchange rates This entry provides the average annual price of a country's monetary unit for the time period specified, expressed in units of local currency per US dollar, as determined by international market forces or by official fiat. The International Organization for Standardization (ISO) 4217 alphabetic currency code for the national medium of exchange is presented in parenthesis. Closing daily exchange rates are not presented in *The World Factbook*, but are used to convert stock values—e.g., the market value of publicly traded shares—to US dollars as of the specified date.

Executive branch This entry includes several subfields. *Chief of state* includes the name and title of the titular leader of the country who represents the state at official and ceremonial functions but may not be involved with the day-to-day activities of the government. *Head of government* includes the name and title of the top administrative leader who is designated to manage the day-to-day activities of the government. For example, in the UK, the monarch is the chief of state, and the prime minister is the head of government. In the US, the president is both the chief of state and the head of government. *Cabinet* includes the official name for this body of high-ranking advisers and the method for selection of members. *Elections* includes the nature of election process or accession to power, date of the last election, and date of the next election. *Election results* includes the percent of vote for each candidate in the last election.

Exports This entry provides the total US dollar amount of merchandise exports on an f.o.b. (free on board) basis. These figures are calculated on an exchange rate basis, i.e., not in purchasing power parity (PPP) terms.

Exports—commodities This entry provides a listing of the highest-valued exported products; it sometimes includes the percent of total dollar value.

Exports—partners This entry provides a rank ordering of trading partners starting with the most important; it sometimes

includes the percent of total dollar value.

Fiscal year This entry identifies the beginning and ending months for a country's accounting period of 12 months, which often is the calendar year but which may begin in any month. All yearly references are for the calendar year (CY) unless indicated as a noncalendar fiscal year (FY).

Flag description This entry provides a written flag description produced from actual flags or the best information available at the time the entry was written. The flags of independent states are used by their dependencies unless there is an officially recognized local flag. Some disputed and other areas do not have flags.

Flag graphic Most versions of the *Factbook* include a color flag at the beginning of the country profile. The flag graphics were produced from actual flags or the best information available at the time of preparation. The flags of independent states are used by their dependencies unless there is an officially recognized local flag. Some disputed and other areas do not have flags.

Freshwater withdrawal (domestic/industrial/agricultural) This entry provides the annual quantity of water in cubic kilometers removed from available sources for use in any purpose. Water drawn-off is not necessarily entirely consumed and some portion may be returned for further use downstream. Domestic sector use refers to water supplied by public distribution systems. Note that some of this total may be used for small industrial and/or limited agricultural purposes. Industrial sector use is the quantity of water used by self-supplied industries not connected to a public distribution system. Agricultural sector use includes water used for irrigation and livestock watering, and does not account for agriculture directly dependent on rainfall. Included are figures for *total* annual water withdrawal and *per capita* water withdrawal.

GDP (official exchange rate) This entry gives the gross domestic product (GDP) or value of all final goods and services produced within a nation in a given year. A nation's GDP at official exchange rates (OER) is the home-currency-denominated annual GDP figure divided by the bilateral average US exchange rate with that country in that year. The measure is simple to compute and gives a precise measure of the value of output. Many economists prefer this measure when gauging the economic power an economy maintains vis-à-vis its neighbors, judging that an exchange rate captures the purchasing power a nation enjoys in the international marketplace.

Official exchange rates, however, can be artificially fixed and/or subject to manipulation—resulting in claims of the country having an under- or over-valued currency—and are not necessarily the equivalent of a market-determined exchange rate. Moreover, even if the official exchange rate is market-determined, market exchange rates are frequently established by a relatively small set of goods and services (the ones the country trades) and may not capture the value of the larger set of goods the country produces. Furthermore, OER-converted GDP is not well suited to comparing domestic GDP over time, since appreciation/depreciation from one year to the next will make the OER GDP value rise/fall regardless of whether home-currency-denominated GDP changed.

GDP (purchasing power parity) This entry gives the gross domestic product (GDP) or value of all final goods and services produced within a nation in a given year. A nation's GDP at purchasing power parity (PPP) exchange rates is the sum value of all goods and services produced in the country valued at prices prevailing in the United States in the year noted. This is the measure most economists prefer when looking at per-capita welfare and when comparing living conditions or use of resources across countries. The measure is difficult to compute, as a US dollar value has to be assigned to all goods and services in the country regardless of whether these goods and services have a direct equivalent in the United States (for example, the value of an ox-cart or non-US military equipment); as a result, PPP estimates for some countries are based on a small and sometimes different set of goods and services. In addition, many countries do not formally participate in the World Bank's PPP project that calculates these measures, so the resulting GDP estimates for these countries may lack precision. For many developing countries, PPP-based GDP measures are multiples of the official exchange rate (OER) measure. The differences between the OER- and PPP-denominated GDP values for most of the wealthy industrialized countries are generally much smaller.

GDP—composition, by end use This entry shows who does the spending in an economy: consumers, businesses, government, and foreigners. The distribution gives the percentage contribution to total GDP of *household consumption*, *government consumption*, *investment in fixed capital*, *investment in inventories*, *exports of goods and services*, and *imports of goods and services*, and will total 100 percent of GDP if the data are complete.

household consumption—consists of expenditures by resident households, and by nonprofit institutions that serve households, on goods and services that are consumed by individuals. This

includes consumption of both domestically produced and foreign goods and services.

government consumption—consists of government expenditures on goods and services. These figures exclude government transfer payments, such as interest on debt, unemployment, and social security, since such payments are not made in exchange for goods and services supplied.

investment in fixed capital—consists of total business spending on fixed assets, such as factories, machinery, equipment, dwellings, and inventories of raw materials, which provide the basis for future production. It is measured gross of the depreciation of the assets, i.e., it includes investment that merely replaces worn-out or scrapped capital. Earlier editions of *The World Factbook* referred to this concept as Investment (gross fixed) and that data now have been moved to this new field.

investment in inventories—consists of net changes to the stock of outputs that are still held by the units that produce them, awaiting further sale to an end user, such as automobiles sitting on a dealer's lot or groceries on the store shelves. This figure may be positive or negative. If the stock of unsold output increases during the relevant time period, *investment in inventories* is positive, but, if the stock of unsold goods declines, it will be negative. *Investment in inventories* normally is an early indicator of the state of the economy. If the stock of unsold items increases unexpectedly—because people stop buying—the economy may be entering a recession; but if the stock of unsold items falls—and goods “go flying off the shelves”—businesses normally try to replace those stocks, and the economy is likely to accelerate.

exports of goods and services—consist of sales, barter, gifts, or grants of goods and services from residents to nonresidents.

imports of goods and services—consist of purchases, barter, or receipts of gifts, or grants of goods and services by residents from nonresidents. *Exports* are treated as a positive item, while imports are treated as a negative item. In a purely accounting sense, *imports* have no direct impact on GDP, which only measures output of the domestic economy. Imports are entered as a negative item to offset the fact that the expenditure figures for consumption, investment, government, and exports also include expenditures on imports. These imports contribute directly to foreign GDP but only indirectly to domestic GDP. Because of this negative offset for imports of goods and services, the sum of the other five items, excluding imports, will always total more than 100 percent of GDP. A surplus of exports of goods and services

over imports indicates an economy is investing abroad, while a deficit indicates an economy is borrowing from abroad.

GDP—composition, by sector of origin This entry shows where production takes place in an economy. The distribution gives the percentage contribution of *agriculture*, *industry*, and *services* to total GDP, and will total 100 percent of GDP if the data are complete. Agriculture includes farming, fishing, and forestry. Industry includes mining, manufacturing, energy production, and construction. Services cover government activities, communications, transportation, finance, and all other private economic activities that do not produce material goods.

GDP—per capita (PPP) This entry shows GDP on a purchasing power parity basis divided by population as of 1 July for the same year.

GDP—real growth rate This entry gives GDP growth on an annual basis adjusted for inflation and expressed as a percent. The growth rates are year-over-year, and not compounded.

GDP methodology In the **Economy** category, GDP dollar estimates for countries are reported both on an official exchange rate (OER) and a purchasing power parity (PPP) basis. Both measures contain information that is useful to the reader. The PPP method involves the use of standardized international dollar price weights, which are applied to the quantities of final goods and services produced in a given economy. The data derived from the PPP method probably provide the best available starting point for comparisons of economic strength and well-being between countries. In contrast, the currency exchange rate method involves a variety of international and domestic financial forces that may not capture the value of domestic output. Whereas PPP estimates for OECD countries are quite reliable, PPP estimates for developing countries are often rough approximations. In developing countries with weak currencies, the exchange rate estimate of GDP in dollars is typically one-fourth to one-half the PPP estimate. Most of the GDP estimates for developing countries are based on extrapolation of PPP numbers published by the UN International Comparison Program (UNICP) and by Professors Robert Summers and Alan Heston of the University of Pennsylvania and their colleagues. GDP derived using the OER method should be used for the purpose of calculating the share of items such as exports, imports, military expenditures, external debt, or the current account balance, because the dollar values presented in the *Factbook* for these items have been converted at official exchange rates, not at PPP. One

should use the OER GDP figure to calculate the proportion of, say, Chinese defense expenditures in GDP, because that share will be the same as one calculated in local currency units. Comparison of OER GDP with PPP GDP may also indicate whether a currency is over- or under-valued. If OER GDP is smaller than PPP GDP, the official exchange rate may be undervalued, and vice versa. However, there is no strong historical evidence that market exchange rates move in the direction implied by the PPP rate, at least not in the short- or medium-term. Note: the numbers for GDP and other economic data should not be chained together from successive volumes of the *Factbook* because of changes in the US dollar measuring rod, revisions of data by statistical agencies, use of new or different sources of information, and changes in national statistical methods and practices.

Geographic coordinates This entry includes rounded latitude and longitude figures for the centroid or center point of a country expressed in degrees and minutes; it is based on the locations provided in the Geographic Names Server (GNS), maintained by the National Geospatial-Intelligence Agency on behalf of the US Board on Geographic Names.

Geographic names This information is presented in **Appendix F: Cross Reference List of Geographic Names**. It includes a listing of various alternate names, former names, local names, and regional names referenced to one or more related *Factbook* entries. Spellings are normally, but not always, those approved by the US Board on Geographic Names (BGN). Alternate names and additional information are included in parentheses.

Geography This category includes the entries dealing with the natural environment and the effects of human activity.

Geography—note This entry includes miscellaneous geographic information of significance not included elsewhere.

Gini index See entry for **Distribution of family income—Gini index**

GNP Gross national product (GNP) is the value of all final goods and services produced within a nation in a given year, plus income earned by its citizens abroad, minus income earned by foreigners from domestic production. The *Factbook*, following current practice, uses GDP rather than GNP to measure national production. However, the user must realize that in certain countries net remittances from citizens working abroad may be important to national well-being.

Government This category includes the entries dealing with the system for the adoption and administration of public policy.

Government—note This entry includes miscellaneous government information of significance not included elsewhere.

Government type This entry gives the basic form of government. Definitions of the major governmental terms are as follows. (Note that for some countries more than one definition applies.):

Absolute monarchy—a form of government where the monarch rules unhindered, i.e., without any laws, constitution, or legally organized opposition.

Anarchy—a condition of lawlessness or political disorder brought about by the absence of governmental authority.

Authoritarian—a form of government in which state authority is imposed onto many aspects of citizens' lives.

Commonwealth—a nation, state, or other political entity founded on law and united by a compact of the people for the common good.

Communist—a system of government in which the state plans and controls the economy and a single—often authoritarian—party holds power; state controls are imposed with the elimination of private ownership of property or capital while claiming to make progress toward a higher social order in which all goods are equally shared by the people (i.e., a classless society).

Confederacy (Confederation)—a union by compact or treaty between states, provinces, or territories, that creates a central government with limited powers; the constituent entities retain supreme authority over all matters except those delegated to the central government.

Constitutional—a government by or operating under an authoritative document (constitution) that sets forth the system of fundamental laws and principles that determines the nature, functions, and limits of that government.

Constitutional democracy—a form of government in which the sovereign power of the people is spelled out in a governing constitution.

Constitutional monarchy—a system of government in which a monarch is guided by a constitution whereby his/her rights, duties, and responsibilities are spelled out in written law or by custom.

Democracy—a form of government in which the supreme power is retained by the people, but which is usually exercised indirectly through a system of representation and delegated authority periodically renewed.

Democratic republic—a state in which the supreme power rests in the body of citizens entitled to vote for officers and representatives responsible to them.

Dictatorship—a form of government in which a ruler or small clique wield absolute power (not restricted by a constitution or laws).

Ecclesiastical—a government administered by a church.

Emirate—similar to a monarchy or sultanate, but a government in which the supreme power is in the hands of an emir (the ruler of a Muslim state); the emir may be an absolute overlord or a sovereign with constitutionally limited authority.

Federal (Federation)—a form of government in which sovereign power is formally divided—usually by means of a constitution—between a central authority and a number of constituent regions (states, colonies, or provinces) so that each region retains some management of its internal affairs; differs from a confederacy in that the central government exerts influence directly upon both individuals as well as upon the regional units.

Federal republic—a state in which the powers of the central government are restricted and in which the component parts (states, colonies, or provinces) retain a degree of self-government; ultimate sovereign power rests with the voters who chose their governmental representatives.

Islamic republic—a particular form of government adopted by some Muslim states; although such a state is, in theory, a theocracy, it remains a republic, but its laws are required to be compatible with the laws of Islam.

Maoism—the theory and practice of Marxism-Leninism developed in China by Mao Zedong (Mao Tse-tung), which states that a continuous revolution is necessary if the leaders of a communist state are to keep in touch with the people.

Marxism—the political, economic, and social principles espoused by 19th century economist Karl Marx; he viewed the struggle of workers as a progression of historical forces that would proceed from a class struggle of the proletariat (workers) exploited by capitalists (business owners), to a socialist “dictatorship of the proletariat,” to, finally, a classless society—Communism.

Marxism-Leninism—an expanded form of communism developed by Lenin from doctrines of Karl Marx; Lenin saw

imperialism as the final stage of capitalism and shifted the focus of workers' struggle from developed to underdeveloped countries.

Monarchy—a government in which the supreme power is lodged in the hands of a monarch who reigns over a state or territory, usually for life and by hereditary right; the monarch may be either a sole absolute ruler or a sovereign—such as a king, queen, or prince—with constitutionally limited authority.

Oligarchy—a government in which control is exercised by a small group of individuals whose authority generally is based on wealth or power.

Parliamentary democracy—a political system in which the legislature (parliament) selects the government—a prime minister, premier, or chancellor along with the cabinet ministers—according to party strength as expressed in elections; by this system, the government acquires a dual responsibility: to the people as well as to the parliament.

Parliamentary government (Cabinet-Parliamentary government)—a government in which members of an executive branch (the cabinet and its leader—a prime minister, premier, or chancellor) are nominated to their positions by a legislature or parliament, and are directly responsible to it; this type of government can be dissolved at will by the parliament (legislature) by means of a no confidence vote or the leader of the cabinet may dissolve the parliament if it can no longer function.

Parliamentary monarchy—a state headed by a monarch who is not actively involved in policy formation or implementation (i.e., the exercise of sovereign powers by a monarch in a ceremonial capacity); true governmental leadership is carried out by a cabinet and its head—a prime minister, premier, or chancellor—who are drawn from a legislature (parliament).

Presidential—a system of government where the executive branch exists separately from a legislature (to which it is generally not accountable).

Republic—a representative democracy in which the people's elected deputies (representatives), not the people themselves, vote on legislation.

Socialism—a government in which the means of planning, producing, and distributing goods is controlled by a central government that theoretically seeks a more just and equitable distribution of property and labor; in actuality, most socialist governments have ended up being no more than dictatorships over workers by a ruling elite.

Sultanate—similar to a monarchy, but a government in which

the supreme power is in the hands of a sultan (the head of a Muslim state); the sultan may be an absolute ruler or a sovereign with constitutionally limited authority.

Theocracy—a form of government in which a Deity is recognized as the supreme civil ruler, but the Deity's laws are interpreted by ecclesiastical authorities (bishops, mullahs, etc.); a government subject to religious authority.

Totalitarian—a government that seeks to subordinate the individual to the state by controlling not only all political and economic matters, but also the attitudes, values, and beliefs of its population.

Greenwich Mean Time (GMT) The mean solar time at the Greenwich Meridian, Greenwich, England, with the hours and days, since 1925, reckoned from midnight. GMT is now a historical term having been replaced by UTC on 1 January 1972. See **Coordinated Universal Time**.

Gross domestic product See **GDP**

Gross national product See **GNP**

Gross national saving Gross national saving is derived by deducting final consumption expenditure (household plus government) from Gross national disposable income, and consists of personal saving, plus business saving (the sum of the capital consumption allowance and retained business profits), plus government saving (the excess of tax revenues over expenditures), but excludes foreign saving (the excess of imports of goods and services over exports). The figures are presented as a percent of GDP. A negative number indicates that the economy as a whole is spending more income than it produces, thus drawing down national wealth (dissaving).

Gross world product See **GWP**

GWP This entry gives the gross world product (GWP) or aggregate value of all final goods and services produced worldwide in a given year.

Health expenditures This entry provides the total expenditure on health as a percentage of GDP. Health expenditures are broadly defined as activities performed either by institutions or individuals through the application of medical, paramedical, and/or nursing knowledge and technology, the primary purpose of which is to promote, restore, or maintain health.

Heliports This entry gives the total number of heliports with hard-surface runways, helipads, or landing areas that support routine sustained helicopter operations exclusively and have support facilities including one or more of the following facilities: lighting, fuel, passenger handling, or maintenance. It includes former airports used exclusively for helicopter operations but excludes heliports limited to day operations and natural clearings that could support helicopter landings and takeoffs.

HIV/AIDS—adult prevalence rate This entry gives an estimate of the percentage of adults (aged 15-49) living with HIV/AIDS. The adult prevalence rate is calculated by dividing the estimated number of adults living with HIV/AIDS at yearend by the total adult population at yearend.

HIV/AIDS—deaths This entry gives an estimate of the number of adults and children who died of AIDS during a given calendar year.

HIV/AIDS—people living with HIV/AIDS This entry gives an estimate of all people (adults and children) alive at yearend with HIV infection, whether or not they have developed symptoms of AIDS.

Hospital bed density This entry provides the number of hospital beds per 1,000 people; it serves as a general measure of inpatient service availability. Hospital beds include inpatient beds available in public, private, general, and specialized hospitals and rehabilitation centers. In most cases, beds for both acute and chronic care are included. Because the level of inpatient services required for individual countries depends on several factors—such as demographic issues and the burden of disease—there is no global target for the number of hospital beds per country. So, while 2 beds per 1,000 in one country may be sufficient, 2 beds per 1,000 in another may be woefully inadequate because of the number of people hospitalized by disease.

Household income or consumption by percentage share Data on household income or consumption come from household surveys, the results adjusted for household size. Nations use different standards and procedures in collecting and adjusting the data. Surveys based on income will normally show a more unequal distribution than surveys based on consumption. The quality of surveys is improving with time, yet caution is still necessary in making inter-country comparisons.

Hydrographic data codes See Data codes

Illicit drugs This entry gives information on the five categories of illicit drugs—narcotics, stimulants, depressants (sedatives), hallucinogens, and cannabis. These categories include many drugs legally produced and prescribed by doctors as well as those illegally produced and sold outside of medical channels.

Cannabis (*Cannabis sativa*) is the common hemp plant, which provides hallucinogens with some sedative properties, and includes marijuana (pot, Acapulco gold, grass, reefer), tetrahydrocannabinol (THC, Marinol), hashish (hash), and hashish oil (hash oil).

Coca (mostly *Erythroxylum coca*) is a bush with leaves that contain the stimulant used to make cocaine. Coca is not to be confused with cocoa, which comes from cacao seeds and is used in making chocolate, cocoa, and cocoa butter.

Cocaine is a stimulant derived from the leaves of the coca bush.

Depressants (sedatives) are drugs that reduce tension and anxiety and include chloral hydrate, barbiturates (Amytal, Nembutal, Seconal, phenobarbital), benzodiazepines (Librium, Valium), methaqualone (Quaalude), glutethimide (Doriden), and others (Equanil, Placidyl, Valmid).

Drugs are any chemical substances that effect a physical, mental, emotional, or behavioral change in an individual.

Drug abuse is the use of any licit or illicit chemical substance that results in physical, mental, emotional, or behavioral impairment in an individual.

Hallucinogens are drugs that affect sensation, thinking, self-awareness, and emotion. Hallucinogens include LSD (acid, microdot), mescaline and peyote (mexc, buttons, cactus), amphetamine variants (PMA, STP, DOB), phencyclidine (PCP, angel dust, hog), phencyclidine analogues (PCE, PCPy, TCP), and others (psilocybin, psilocyn).

Hashish is the resinous exudate of the cannabis or hemp plant (*Cannabis sativa*).

Heroin is a semisynthetic derivative of morphine.

Mandrax is a trade name for methaqualone, a pharmaceutical depressant.

Marijuana is the dried leaf of the cannabis or hemp plant (*Cannabis sativa*).

Methaqualone is a pharmaceutical depressant, referred to as mandrax in Southwest Asia and Africa.

Narcotics are drugs that relieve pain, often induce sleep, and refer to opium, opium derivatives, and synthetic substitutes. Natural narcotics include opium (paregoric, parepectolin), morphine (MS-Contin, Roxanol), codeine (Tylenol with codeine, Empirin with codeine, Robitussin AC), and thebaine. Semisynthetic narcotics include heroin (horse, smack), and hydromorphone (Dilaudid). Synthetic narcotics include meperidine or Pethidine (Demerol, Mepergan), methadone (Dolophine, Methadose), and others (Darvon, Lomotil).

Opium is the brown, gummy exudate of the incised, unripe seedpod of the opium poppy.

Opium poppy (*Papaver somniferum*) is the source for the natural and semisynthetic narcotics.

Poppy straw is the entire cut and dried opium poppy-plant material, other than the seeds. Opium is extracted from poppy straw in commercial operations that produce the drug for medical use.

Qat (kat, khat) is a stimulant from the buds or leaves of *Catha edulis* that is chewed or drunk as tea.

Quaaludes is the North American slang term for methaqualone, a pharmaceutical depressant.

Stimulants are drugs that relieve mild depression, increase energy and activity, and include cocaine (coke, snow, crack), amphetamines (Desoxyn, Dexedrine), ephedrine, ecstasy (clarity, essence, doctor, Adam), phenmetrazine (Preludin), methylphenidate (Ritalin), and others (Cylert, Sanorex, Tenuate).

Imports This entry provides the total US dollar amount of merchandise imports on a c.i.f. (cost, insurance, and freight) or f.o.b. (free on board) basis. These figures are calculated on an exchange rate basis, i.e., not in purchasing power parity (PPP) terms.

Imports—commodities This entry provides a listing of the highest-valued imported products; it sometimes includes the percent of total dollar value.

Imports—partners This entry provides a rank ordering of trading partners starting with the most important; it sometimes includes the percent of total dollar value.

Independence For most countries, this entry gives the date that sovereignty was achieved and from which nation, empire, or trusteeship. For the other countries, the date given may not represent “independence” in the strict sense, but rather some significant

nationhood event such as the traditional founding date or the date of unification, federation, confederation, establishment, fundamental change in the form of government, or state succession. For a number of countries, the establishment of statehood was a lengthy evolutionary process occurring over decades or even centuries. In such cases, several significant dates are cited. Dependent areas include the notation “none” followed by the nature of their dependency status. Also see the **Terminology** note.

Industrial production growth rate This entry gives the annual percentage increase in industrial production (includes manufacturing, mining, and construction).

Industries This entry provides a rank ordering of industries starting with the largest by value of annual output.

Infant mortality rate This entry gives the number of deaths of infants under one year old in a given year per 1,000 live births in the same year. This rate is often used as an indicator of the level of health in a country.

Inflation rate (consumer prices) This entry furnishes the annual percent change in consumer prices compared with the previous year’s consumer prices.

International disputes See **Disputes—international**

International law organization participation This entry includes information on a country’s acceptance of jurisdiction of the International Court of Justice (ICJ) and of the International Criminal Court (ICCt); 55 countries have accepted ICJ jurisdiction with reservations and 11 have accepted ICJ jurisdiction without reservations; 114 countries have accepted ICCt jurisdiction. **Appendix B: International Organizations and Groups** explains the differing mandates of the ICJ and ICCt.

International organization participation This entry lists in alphabetical order by abbreviation those international organizations in which the subject country is a member or participates in some other way.

International organizations This information is presented in **Appendix B: International Organizations and Groups** which includes the name, abbreviation, date established, aim, and members by category.

Internet country code This entry includes the two-letter codes maintained by the International Organization for Standardization (ISO) in the ISO 3166 Alpha-2 list and used by the Internet Assigned Numbers Authority (IANA) to establish country-coded top-level domains (ccTLDs).

Internet hosts This entry lists the number of Internet hosts available within a country. An Internet host is a computer connected directly to the Internet; normally an Internet Service Provider's (ISP) computer is a host. Internet users may use either a hard-wired terminal, at an institution with a mainframe computer connected directly to the Internet, or may connect remotely by way of a modem via telephone line, cable, or satellite to the Internet Service Provider's host computer. The number of hosts is one indicator of the extent of Internet connectivity.

Internet users This entry gives the number of users within a country that access the Internet. Statistics vary from country to country and may include users who access the Internet at least several times a week to those who access it only once within a period of several months.

Introduction This category includes one entry, **Background**.

Investment (gross fixed) This entry records total business spending on fixed assets, such as factories, machinery, equipment, dwellings, and inventories of raw materials, which provide the basis for future production. It is measured gross of the depreciation of the assets, i.e., it includes investment that merely replaces worn-out or scrapped capital.

Irrigated land This entry gives the number of square kilometers of land area that is artificially supplied with water.

Judicial branch This entry includes three subfields. *The highest court(s)* subfield includes the name(s) of a country's highest level court(s), the number and titles of the judges, and the types of cases heard by the court, which commonly are based on civil, criminal, administrative, and constitutional law. A number of countries have separate constitutional courts. *The judge selection and term of office* subfield includes the organizations and associated officials responsible for nominating and appointing judges, and a brief description of the process. The selection process can be indicative of the independence of a country's court system from other branches of its government. Also included in this subfield are judges' tenures, which can range

from a few years, to a specified retirement age, to lifelong appointments. *The subordinate courts* subfield lists the courts lower in the hierarchy of a country's court system. A few countries with federal-style governments, such as Brazil, Canada, and the US, in addition to their federal court, have separate state - or province-level court systems, though generally the two systems interact.

Labor force This entry contains the total labor force figure.

Labor force—by occupation This entry lists the percentage distribution of the labor force by sector of occupation. *Agriculture* includes farming, fishing, and forestry. *Industry* includes mining, manufacturing, energy production, and construction. *Services* cover government activities, communications, transportation, finance, and all other economic activities that do not produce material goods. The distribution will total less than 100 percent if the data are incomplete and may range from 99-101 percent due to rounding.

Land boundaries This entry contains the *total* length of all land boundaries and the individual lengths for each of the contiguous *border countries*. When available, official lengths published by national statistical agencies are used. Because surveying methods may differ, country border lengths reported by contiguous countries may differ.

Land use This entry contains the percentage shares of total land area for three different types of land use: *arable land*—land cultivated for crops like wheat, maize, and rice that are replanted after each harvest; *permanent crops*—land cultivated for crops like citrus, coffee, and rubber that are not replanted after each harvest; includes land under flowering shrubs, fruit trees, nut trees, and vines, but excludes land under trees grown for wood or timber; *other*—any land not arable or under permanent crops; includes permanent meadows and pastures, forests and woodlands, built-on areas, roads, barren land, etc.

Languages This entry provides a rank ordering of languages starting with the largest and sometimes includes the percent of total population speaking that language.

Legal system This entry provides the description of a country's legal system. A statement on judicial review of legislative acts is also included for a number of countries. The legal systems of nearly all countries are generally modeled upon elements of five main types: civil law (including French law, the Napoleonic Code, Roman law, Roman-Dutch law, and Spanish law); common law (including United State law); customary law; mixed or pluralistic law; and religious law (including Islamic law). An additional type of legal system—

international law, which governs the conduct of independent nations in their relationships with one another—is also addressed below. The following list describes these legal systems, the countries or world regions where these systems are enforced, and a brief statement on the origins and major features of each.

Civil Law—The most widespread type of legal system in the world, applied in various forms in approximately 150 countries. Also referred to as European continental law, the civil law system is derived mainly from the Roman *Corpus Juris Civilis*, (Body of Civil Law), a collection of laws and legal interpretations compiled under the East Roman (Byzantine) Emperor Justinian I between A.D. 528 and 565. The major feature of civil law systems is that the laws are organized into systematic written codes. In civil law the sources recognized as authoritative are principally legislation—especially codifications in constitutions or statutes enacted by governments—and secondarily, custom. The civil law systems in some countries are based on more than one code.

Common Law—A type of legal system, often synonymous with “English common law,” which is the system of England and Wales in the UK, and is also in force in approximately 80 countries formerly part of or influenced by the former British Empire. English common law reflects Biblical influences as well as remnants of law systems imposed by early conquerors including the Romans, Anglo-Saxons, and Normans. Some legal scholars attribute the formation of the English common law system to King Henry II (r. 1154-1189). Until the time of his reign, laws customary among England’s various manorial and ecclesiastical (church) jurisdictions were administered locally. Henry II established the king’s court and designated that laws were “common” to the entire English realm. The foundation of English common law is “legal precedent”—referred to as *stare decisis*, meaning “to stand by things decided.” In the English common law system, court judges are bound in their decisions in large part by the rules and other doctrines developed—and supplemented over time—by the judges of earlier English courts.

Customary Law—A type of legal system that serves as the basis of, or has influenced, the present-day laws in approximately 40 countries—mostly in Africa, but some in the Pacific islands, Europe, and the Near East. Customary law is also referred to as “primitive law,” “unwritten law,” “indigenous law,” and “folk law.” There is no single history of customary law such as that found in Roman civil law, English common law, Islamic law, or the Napoleonic Civil Code. The earliest systems of law in human society were customary, and usually developed in small agrarian

and hunter-gatherer communities. As the term implies, customary law is based upon the customs of a community. Common attributes of customary legal systems are that they are seldom written down, they embody an organized set of rules regulating social relations, and they are agreed upon by members of the community. Although such law systems include sanctions for law infractions, resolution tends to be reconciliatory rather than punitive. A number of African states practiced customary law many centuries prior to colonial influences. Following colonization, such laws were written down and incorporated to varying extents into the legal systems imposed by their colonial powers.

European Union Law—A sub-discipline of international law known as “supranational law” in which the rights of sovereign nations are limited in relation to one another. Also referred to as the Law of the European Union or Community Law, it is the unique and complex legal system that operates in tandem with the laws of the 27 member states of the European Union (EU). Similar to federal states, the EU legal system ensures compliance from the member states because of the Union’s decentralized political nature. The European Court of Justice (ECJ), established in 1952 by the Treaty of Paris, has been largely responsible for the development of EU law. Fundamental principles of European Union law include: *subsidiarity*—the notion that issues be handled by the smallest, lowest, or least centralized competent authority; *proportionality*—the EU may only act to the extent needed to achieve its objectives; *conferral*—the EU is a union of member states, and all its authorities are voluntarily granted by its members; *legal certainty*—requires that legal rules be clear and precise; and *precautionary principle*—a moral and political principle stating that if an action or policy might cause severe or irreversible harm to the public or to the environment, in the absence of a scientific consensus that harm would not ensue, the burden of proof falls on those who would advocate taking the action.

French Law—A type of civil law that is the legal system of France. The French system also serves as the basis for, or is mixed with, other legal systems in approximately 50 countries, notably in North Africa, the Near East, and the French territories and dependencies. French law is primarily codified or systematic written civil law. Prior to the French Revolution (1789-1799), France had no single national legal system. Laws in the northern areas of present-day France were mostly local customs based on privileges and exemptions granted by kings and feudal lords,

while in the southern areas Roman law predominated. The introduction of the Napoleonic Civil Code during the reign of Napoleon I in the first decade of the 19th century brought major reforms to the French legal system, many of which remain part of France's current legal structure, though all have been extensively amended or redrafted to address a modern nation. French law distinguishes between "public law" and "private law." Public law relates to government, the French Constitution, public administration, and criminal law. Private law covers issues between private citizens or corporations. The most recent changes to the French legal system—introduced in the 1980s—were the decentralization laws, which transferred authority from centrally appointed government representatives to locally elected representatives of the people.

International Law—The law of the international community, or the body of customary rules and treaty rules accepted as legally binding by states in their relations with each other. International law differs from other legal systems in that it primarily concerns sovereign political entities. There are three separate disciplines of international law: public international law, which governs the relationship between provinces and international entities and includes treaty law, law of the sea, international criminal law, and international humanitarian law; private international law, which addresses legal jurisdiction; and supranational law—a legal framework wherein countries are bound by regional agreements in which the laws of the member countries are held inapplicable when in conflict with supranational laws. At present the European Union is the only entity under a supranational legal system. The term "international law" was coined by Jeremy Bentham in 1780 in his *Principles of Morals and Legislation*, though laws governing relations between states have been recognized from very early times (many centuries B.C.). Modern international law developed alongside the emergence and growth of the European nation-states beginning in the early 16th century. Other factors that influenced the development of international law included the revival of legal studies, the growth of international trade, and the practice of exchanging emissaries and establishing legations. The sources of International law are set out in Article 38-1 of the Statute of the International Court of Justice within the UN Charter.

Islamic Law—The most widespread type of religious law, it is the legal system enforced in over 30 countries, particularly in the Near East, but also in Central and South Asia, Africa, and Indonesia. In many countries Islamic law operates in tandem with

a civil law system. Islamic law is embodied in the sharia, an Arabic word meaning “the right path.” Sharia covers all aspects of public and private life and organizes them into five categories: obligatory, recommended, permitted, disliked, and forbidden. The primary sources of sharia law are the Qur’an, believed by Muslims to be the word of God revealed to the Prophet Muhammad by the angel Gabriel, and the Sunnah, the teachings of the Prophet and his works. In addition to these two primary sources, traditional Sunni Muslims recognize the consensus of Muhammad’s companions and Islamic jurists on certain issues, called *ijmas*, and various forms of reasoning, including analogy by legal scholars, referred to as *qiyas*. Shia Muslims reject *ijmas* and *qiyas* as sources of sharia law.

Mixed Law—Also referred to as pluralistic law, mixed law consists of elements of some or all of the other main types of legal systems—civil, common, customary, and religious. The mixed legal systems of a number of countries came about when colonial powers overlaid their own legal systems upon colonized regions but retained elements of the colonies’ existing legal systems.

Napoleonic Civil Code—A type of civil law, referred to as the Civil Code or *Code Civil des Francais*, forms part of the legal system of France, and underpins the legal systems of Bolivia, Egypt, Lebanon, Poland, and the US state of Louisiana. The Civil Code was established under Napoleon I, enacted in 1804, and officially designated the *Code Napoleon* in 1807. This legal system combined the Teutonic civil law tradition of the northern provinces of France with the Roman law tradition of the southern and eastern regions of the country. The Civil Code bears similarities in its arrangement to the Roman *Body of Civil Law* (see Civil Law above). As enacted in 1804, the Code addressed personal status, property, and the acquisition of property. Codes added over the following six years included civil procedures, commercial law, criminal law and procedures, and a penal code.

Religious Law—A legal system which stems from the sacred texts of religious traditions and in most cases professes to cover all aspects of life as a seamless part of devotional obligations to a transcendent, imminent, or deep philosophical reality. Implied as the basis of religious law is the concept of unalterability, because the word of God cannot be amended or legislated against by judges or governments. However, a detailed legal system generally requires human elaboration. The main types of religious law are sharia in Islam, halakha in Judaism, and canon law in some Christian groups. Sharia is the most widespread religious legal system (see Islamic Law), and is the sole system of law for

countries including Iran, the Maldives, and Saudi Arabia. No country is fully governed by halakha, but Jewish people may decide to settle disputes through Jewish courts and be bound by their rulings. Canon law is not a divine law as such because it is not found in revelation. It is viewed instead as human law inspired by the word of God and applying the demands of that revelation to the actual situation of the church. Canon law regulates the internal ordering of the Roman Catholic Church, the Eastern Orthodox Church, and the Anglican Communion.

Roman Law—A type of civil law developed in ancient Rome and practiced from the time of the city's founding (traditionally 753 B.C.) until the fall of the Western Empire in the 5th century A.D. Roman law remained the legal system of the Byzantine (Eastern Empire) until the fall of Constantinople in 1453. Preserved fragments of the first legal text, known as the Law of the Twelve Tables, dating from the 5th century B.C., contained specific provisions designed to change the prevailing customary law. Early Roman law was drawn from custom and statutes; later, during the time of the empire, emperors asserted their authority as the ultimate source of law. The basis for Roman laws was the idea that the exact form—not the intention—of words or of actions produced legal consequences. It was only in the late 6th century A.D. that a comprehensive Roman code of laws was published (see Civil Law above). Roman law served as the basis of law systems developed in a number of continental European countries.

Roman-Dutch Law—A type of civil law based on Roman law as applied in the Netherlands. Roman-Dutch law serves as the basis for legal systems in seven African countries, as well as Guyana, Indonesia, and Sri Lanka. This law system, which originated in the province of Holland and expanded throughout the Netherlands (to be replaced by the French Civil Code in 1809), was instituted in a number of sub-Saharan African countries during the Dutch colonial period. The Dutch jurist/philosopher Hugo Grotius was the first to attempt to reduce Roman-Dutch civil law into a system in his *Jurisprudence of Holland* (written 1619-20, commentary published 1621). The Dutch historian/lawyer Simon van Leeuwen coined the term "Roman-Dutch law" in 1652.

Spanish Law—A type of civil law, often referred to as the Spanish Civil Code, it is the present legal system of Spain and is the basis of legal systems in 12 countries mostly in Central and South America, but also in southwestern Europe, northern and western Africa, and southeastern Asia. The Spanish Civil Code

reflects a complex mixture of customary, Roman, Napoleonic, local, and modern codified law. The laws of the Visigoth invaders of Spain in the 5th to 7th centuries had the earliest major influence on Spanish legal system development. The Christian Reconquest of Spain in the 11th through 15th centuries witnessed the development of customary law, which combined canon (religious) and Roman law. During several centuries of Hapsburg and Bourbon rule, systematic recompilations of the existing national legal system were attempted, but these often conflicted with local and regional customary civil laws. Legal system development for most of the 19th century concentrated on formulating a national civil law system, which was finally enacted in 1889 as the Spanish Civil Code. Several sections of the code have been revised, the most recent of which are the penal code in 1989 and the judiciary code in 2001. The Spanish Civil Code separates public and private law. Public law includes constitutional law, administrative law, criminal law, process law, financial and tax law, and international public law. Private law includes civil law, commercial law, labor law, and international private law.

United States Law—A type of common law, which is the basis of the legal system of the United States and that of its island possessions in the Caribbean and the Pacific. This legal system has several layers, more possibly than in most other countries, and is due in part to the division between federal and state law. The United States was founded not as one nation but as a union of 13 colonies, each claiming independence from the British Crown. The US Constitution, implemented in 1789, began shifting power away from the states and toward the federal government, though the states today retain substantial legal authority. US law draws its authority from four sources: *constitutional law*, *statutory law*, *administrative regulations*, and *case law*. Constitutional law is based on the US Constitution and serves as the supreme federal law. Taken together with those of the state constitutions, these documents outline the general structure of the federal and state governments and provide the rules and limits of power. US statutory law is legislation enacted by the US Congress and is codified in the United States Code. The 50 state legislatures have similar authority to enact state statutes. Administrative law is the authority delegated to federal and state executive agencies. Case law, also referred to as common law, covers areas where constitutional or statutory law is lacking. Case law is a collection of judicial decisions, customs, and general principles that began in England centuries ago, that were adopted in America at the

time of the Revolution, and that continue to develop today.

Legislative branch This entry contains information on the structure (unicameral, bicameral, tricameral), formal name, number of seats, and term of office. *Elections* includes the nature of the election process or accession to power, date of the last election, and date of the next election. *Election results* includes the percent of vote and/or number of seats held by each party in the last election.

Life expectancy at birth This entry contains the average number of years to be lived by a group of people born in the same year, if mortality at each age remains constant in the future. Life expectancy at birth is also a measure of overall quality of life in a country and summarizes the mortality at all ages. It can also be thought of as indicating the potential return on investment in human capital and is necessary for the calculation of various actuarial measures.

Literacy This entry includes a *definition* of literacy and Census Bureau percentages for the *total population*, *males*, and *females*. There are no universal definitions and standards of literacy. Unless otherwise specified, all rates are based on the most common definition—the ability to read and write at a specified age. Detailing the standards that individual countries use to assess the ability to read and write is beyond the scope of the *Factbook*. Information on literacy, while not a perfect measure of educational results, is probably the most easily available and valid for international comparisons. Low levels of literacy, and education in general, can impede the economic development of a country in the current rapidly changing, technology-driven world.

Location This entry identifies the country's regional location, neighboring countries, and adjacent bodies of water.

Major infectious diseases This entry lists major infectious diseases likely to be encountered in countries where the risk of such diseases is assessed to be very high as compared to the United States. These infectious diseases represent risks to US government personnel traveling to the specified country for a period of less than three years. The **degree of risk** is assessed by considering the foreign nature of these infectious diseases, their severity, and the probability of being affected by the diseases present. The diseases listed do not necessarily represent the total disease burden experienced by the local population.

The risk to an individual traveler varies considerably by the specific

location, visit duration, type of activities, type of accommodations, time of year, and other factors. Consultation with a travel medicine physician is needed to evaluate individual risk and recommend appropriate preventive measures such as vaccines.

Diseases are organized into the following six exposure categories shown in italics *and listed in typical descending order of risk*. Note: The sequence of exposure categories listed in individual country entries may vary according to local conditions.

food or waterborne diseases acquired through eating or drinking on the local economy:

Hepatitis A—viral disease that interferes with the functioning of the liver; spread through consumption of food or water contaminated with fecal matter, principally in areas of poor sanitation; victims exhibit fever, jaundice, and diarrhea; 15% of victims will experience prolonged symptoms over 6-9 months; vaccine available.

Hepatitis E—water-borne viral disease that interferes with the functioning of the liver; most commonly spread through fecal contamination of drinking water; victims exhibit jaundice, fatigue, abdominal pain, and dark colored urine.

Typhoid fever—bacterial disease spread through contact with food or water contaminated by fecal matter or sewage; victims exhibit sustained high fevers; left untreated, mortality rates can reach 20%.

vectorborne diseases acquired through the bite of an infected arthropod:

Malaria—caused by single-cell parasitic protozoa *Plasmodium*; transmitted to humans via the bite of the female Anopheles mosquito; parasites multiply in the liver attacking red blood cells resulting in cycles of fever, chills, and sweats accompanied by anemia; death due to damage to vital organs and interruption of blood supply to the brain; endemic in 100, mostly tropical, countries with 90% of cases and the majority of 1.5-2.5 million estimated annual deaths occurring in sub-Saharan Africa.

Dengue fever—mosquito-borne (*Aedes aegypti*) viral disease associated with urban environments; manifests as sudden onset of fever and severe headache; occasionally produces shock and hemorrhage leading to death in 5% of cases.

Yellow fever—mosquito-borne viral disease; severity ranges from influenza-like symptoms to severe hepatitis and hemorrhagic fever; occurs only in tropical South America and sub-Saharan Africa, where most cases are reported; fatality rate is less than 20%.

Japanese Encephalitis—mosquito-borne (*Culex tritaeniorhynchus*) viral disease associated with rural areas in Asia; acute encephalitis can progress to paralysis, coma, and death; fatality rates 30%.

African Trypanosomiasis—caused by the parasitic protozoa *Trypanosoma*; transmitted to humans via the bite of bloodsucking Tsetse flies; infection leads to malaise and irregular fevers and, in advanced cases when the parasites invade the central nervous system, coma and death; endemic in 36 countries of sub-Saharan Africa; cattle and wild animals act as reservoir hosts for the parasites.

Cutaneous Leishmaniasis—caused by the parasitic protozoa *leishmania*; transmitted to humans via the bite of sandflies; results in skin lesions that may become chronic; endemic in 88 countries; 90% of cases occur in Iran, Afghanistan, Syria, Saudi Arabia, Brazil, and Peru; wild and domesticated animals as well as humans can act as reservoirs of infection.

Plague—bacterial disease transmitted by fleas normally associated with rats; person-to-person airborne transmission also possible; recent plague epidemics occurred in areas of Asia, Africa, and South America associated with rural areas or small towns and villages; manifests as fever, headache, and painfully swollen lymph nodes; disease progresses rapidly and without antibiotic treatment leads to pneumonic form with a death rate in excess of 50%.

Crimean-Congo hemorrhagic fever—tick-borne viral disease; infection may also result from exposure to infected animal blood or tissue; geographic distribution includes Africa, Asia, the Middle East, and Eastern Europe; sudden onset of fever, headache, and muscle aches followed by hemorrhaging in the bowels, urine, nose, and gums; mortality rate is approximately 30%.

Rift Valley fever—viral disease affecting domesticated animals and humans; transmission is by mosquito and other biting insects; infection may also occur through handling of infected meat or contact with blood; geographic distribution includes eastern and southern Africa where cattle and sheep are raised; symptoms are generally mild with fever and some liver abnormalities, but the disease may progress to hemorrhagic fever, encephalitis, or ocular disease; fatality rates are low at about 1% of cases.

Chikungunya—mosquito-borne (*Aedes aegypti*) viral disease associated with urban environments, similar to Dengue Fever; characterized by sudden onset of fever, rash, and severe joint pain usually lasting 3-7 days, some cases result in persistent arthritis.

water contact diseases acquired through swimming or wading in freshwater lakes, streams, and rivers:

Leptospirosis—bacterial disease that affects animals and humans; infection occurs through contact with water, food, or soil contaminated by animal urine; symptoms include high fever, severe headache, vomiting, jaundice, and diarrhea; untreated, the disease can result in kidney damage, liver failure, meningitis, or respiratory distress; fatality rates are low but left untreated recovery can take months.

Schistosomiasis—caused by parasitic trematode flatworm *Schistosoma*; fresh water snails act as intermediate host and release larval form of parasite that penetrates the skin of people exposed to contaminated water; worms mature and reproduce in the blood vessels, liver, kidneys, and intestines releasing eggs, which become trapped in tissues triggering an immune response; may manifest as either urinary or intestinal disease resulting in decreased work or learning capacity; mortality, while generally low, may occur in advanced cases usually due to bladder cancer; endemic in 74 developing countries with 80% of infected people living in sub-Saharan Africa; humans act as the reservoir for this parasite.

aerosolized dust or soil contact disease acquired through inhalation of aerosols contaminated with rodent urine:

Lassa fever—viral disease carried by rats of the genus *Mastomys*; endemic in portions of West Africa; infection occurs through direct contact with or consumption of food contaminated by rodent urine or fecal matter containing virus particles; fatality rate can reach 50% in epidemic outbreaks.

respiratory disease acquired through close contact with an infectious person:

Meningococcal meningitis—bacterial disease causing an inflammation of the lining of the brain and spinal cord; one of the most important bacterial pathogens is *Neisseria meningitidis* because of its potential to cause epidemics; symptoms include stiff neck, high fever, headaches, and vomiting; bacteria are transmitted from person to person by respiratory droplets and facilitated by close and prolonged contact resulting from crowded living conditions, often with a seasonal distribution; death occurs in 5-15% of cases, typically within 24-48 hours of onset of symptoms; highest burden of meningococcal disease occurs in the hyperendemic region of sub-Saharan Africa known as the “Meningitis Belt” which stretches from Senegal east to Ethiopia.

animal contact disease acquired through direct contact with local

animals:

Rabies—viral disease of mammals usually transmitted through the bite of an infected animal, most commonly dogs; virus affects the central nervous system causing brain alteration and death; symptoms initially are non-specific fever and headache progressing to neurological symptoms; death occurs within days of the onset of symptoms.

Major urban areas—population This entry provides the population of the capital and up to five major cities defined as urban agglomerations with populations of at least 750,000 people. An *urban agglomeration* is defined as comprising the city or town proper and also the suburban fringe or thickly settled territory lying outside of, but adjacent to, the boundaries of the city. For smaller countries, lacking urban centers of 750,000 or more, only the population of the capital is presented.

Manpower available for military service This entry gives the number of males and females falling in the military age range for a country (defined as being ages 16-49) and assumes that every individual is fit to serve.

Manpower fit for military service This entry gives the number of males and females falling in the military age range for a country (defined as being ages 16-49) and who are not otherwise disqualified for health reasons; accounts for the health situation in the country and provides a more realistic estimate of the actual number fit to serve.

Manpower reaching militarily significant age annually This entry gives the number of males and females entering the military manpower pool (i.e., reaching age 16) in any given year and is a measure of the availability of military-age young adults.

Map references This entry includes the name of the *Factbook* reference map on which a country may be found. Note that boundary representations on these maps are not necessarily authoritative. The entry on **Geographic coordinates** may be helpful in finding some smaller countries.

Maritime claims This entry includes the following claims, the definitions of which are excerpted from the United Nations Convention on the Law of the Sea (UNCLOS), which alone contains the full and definitive descriptions:

territorial sea—the sovereignty of a coastal state extends beyond its land territory and internal waters to an adjacent belt of sea, described as the territorial sea in the UNCLOS (Part II); this sovereignty extends to the air space over the territorial sea as well as its underlying seabed and subsoil; every state has the right to establish the breadth of its territorial sea up to a limit not exceeding 12 nautical miles; the normal baseline for measuring the breadth of the territorial sea is the mean low-water line along the coast as marked on large-scale charts officially recognized by the coastal state; where the coasts of two states are opposite or adjacent to each other, neither state is entitled to extend its territorial sea beyond the median line, every point of which is equidistant from the nearest points on the baseline from which the territorial seas of both states are measured; the UNCLOS describes specific rules for archipelagic states.

contiguous zone—according to the UNCLOS (Article 33), this is a zone contiguous to a coastal state's territorial sea, over which it may exercise the control necessary to: prevent infringement of its customs, fiscal, immigration, or sanitary laws and regulations within its territory or territorial sea; punish infringement of the above laws and regulations committed within its territory or territorial sea; the contiguous zone may not extend beyond 24 nautical miles from the baselines from which the breadth of the territorial sea is measured (e.g., the US has claimed a 12-nautical mile contiguous zone in addition to its 12-nautical mile territorial sea); where the coasts of two states are opposite or adjacent to each other, neither state is entitled to extend its contiguous zone beyond the median line, every point of which is equidistant from the nearest points on the baseline from which the contiguous zone of both states are measured.

exclusive economic zone (EEZ)—the UNCLOS (Part V) defines the EEZ as a zone beyond and adjacent to the territorial sea in which a coastal state has: sovereign rights for the purpose of exploring and exploiting, conserving and managing the natural resources, whether living or non-living, of the waters superjacent to the seabed and of the seabed and its subsoil, and with regard to other activities for the economic exploitation and exploration of the zone, such as the production of energy from the water, currents, and winds; jurisdiction with regard to the establishment and use of artificial islands, installations, and structures; marine scientific research; the protection and preservation of the marine environment; the outer limit of the exclusive economic zone shall not exceed 200 nautical miles from the baselines from which the breadth of the territorial sea is measured.

continental shelf—the UNCLOS (Article 76) defines the continental shelf of a coastal state as comprising the seabed and subsoil of the submarine areas that extend beyond its territorial sea throughout the natural prolongation of its land territory to the outer edge of the continental margin, or to a distance of 200 nautical miles from the baselines from which the breadth of the territorial sea is measured where the outer edge of the continental margin does not extend up to that distance; the continental margin comprises the submerged prolongation of the landmass of the coastal state, and consists of the seabed and subsoil of the shelf, the slope and the rise; wherever the continental margin extends beyond 200 nautical miles from the baseline, coastal states may extend their claim to a distance not to exceed 350 nautical miles from the baseline or 100 nautical miles from the 2,500-meter isobath, which is a line connecting points of 2,500 meters in depth; it does not include the deep ocean floor with its oceanic ridges or the subsoil thereof.

exclusive fishing zone—while this term is not used in the UNCLOS, some states (e.g., the United Kingdom) have chosen not to claim an EEZ, but rather to claim jurisdiction over the living resources off their coast; in such cases, the term exclusive fishing zone is often used; the breadth of this zone is normally the same as the EEZ or 200 nautical miles.

Market value of publicly traded shares This entry gives the value of shares issued by publicly traded companies at a price determined in the national stock markets on the final day of the period indicated. It is simply the latest price per share multiplied by the total number of outstanding shares, cumulated over all companies listed on the particular exchange.

Maternal mortality rate The maternal mortality rate (MMR) is the annual number of female deaths per 100,000 live births from any cause related to or aggravated by pregnancy or its management (excluding accidental or incidental causes). The MMR includes deaths during pregnancy, childbirth, or within 42 days of termination of pregnancy, irrespective of the duration and site of the pregnancy, for a specified year.

Median age This entry is the age that divides a population into two numerically equal groups; that is, half the people are younger than this age and half are older. It is a single index that summarizes the age distribution of a population. Currently, the median age ranges from a low of about 15 in Uganda and Gaza Strip to 40 or more in several European countries and Japan. See the entry for “Age

structure” for the importance of a young versus an older age structure and, by implication, a low versus a higher median age.

Merchant marine Merchant marine may be defined as all ships engaged in the carriage of goods; or all commercial vessels (as opposed to all nonmilitary ships), which excludes tugs, fishing vessels, offshore oil rigs, etc. This entry contains information in four fields—*total*, *ships by type*, *foreign-owned*, and *registered in other countries*.

Total includes the number of ships (1,000 GRT or over), total DWT for those ships, and total GRT for those ships. DWT or dead weight tonnage is the total weight of cargo, plus bunkers, stores, etc., that a ship can carry when immersed to the appropriate load line. GRT or gross register tonnage is a figure obtained by measuring the entire sheltered volume of a ship available for cargo and passengers and converting it to tons on the basis of 100 cubic feet per ton; there is no stable relationship between GRT and DWT.

Ships by type includes a listing of barge carriers, bulk cargo ships, cargo ships, chemical tankers, combination bulk carriers, combination ore/oil carriers, container ships, liquefied gas tankers, livestock carriers, multifunctional large-load carriers, petroleum tankers, passenger ships, passenger/cargo ships, railcar carriers, refrigerated cargo ships, roll-on/roll-off cargo ships, short-sea passenger ships, specialized tankers, and vehicle carriers.

Foreign-owned are ships that fly the flag of one country but belong to owners in another.

Registered in other countries are ships that belong to owners in one country but fly the flag of another.

Military This category includes the entries dealing with a country’s military structure, manpower, and expenditures.

Military—note This entry includes miscellaneous military information of significance not included elsewhere.

Military branches This entry lists the service branches subordinate to defense ministries or the equivalent (typically ground, naval, air, and marine forces).

Military expenditures This entry gives spending on defense programs for the most recent year available as a percent of gross domestic product (GDP); the GDP is calculated on an exchange rate basis, i.e., not in terms of purchasing power parity (PPP). For countries with no military forces, this figure can include expenditures

on public security and police.

Military service age and obligation This entry gives the required ages for voluntary or conscript military service and the length of service obligation.

Money figures All money figures are expressed in contemporaneous US dollars unless otherwise indicated.

Mother's mean age at first birth This entry provides the mean (average) age of mothers at the birth of their first child. It is a useful indicator for gauging the success of family planning programs aiming to reduce maternal mortality, increase contraceptive use—particularly among married and unmarried adolescents, delay age at first marriage, and improve the health of newborns.

National anthem A generally patriotic musical composition—usually in the form of a song or hymn of praise—that evokes and eulogizes the history, traditions, or struggles of a nation or its people. National anthems can be officially recognized as a national song by a country's constitution or by an enacted law, or simply by tradition. Although most anthems contain lyrics, some do not.

National holiday This entry gives the primary national day of celebration—usually independence day.

National symbol(s) A national symbol is a faunal, floral, or other abstract representation—or some distinctive object—that over time has come to be closely identified with a country or entity. Not all countries have national symbols; a few countries have more than one.

Nationality This entry provides the identifying terms for citizens—*noun* and *adjective*.

Natural gas—consumption This entry is the total natural gas consumed in cubic meters (cu m). The discrepancy between the amount of natural gas produced and/or imported and the amount consumed and/or exported is due to the omission of stock changes and other complicating factors.

Natural gas—exports This entry is the total natural gas exported in cubic meters (cu m).

Natural gas—imports This entry is the total natural gas imported in cubic meters (cu m).

Natural gas—production This entry is the total natural gas

produced in cubic meters (cu m). The discrepancy between the amount of natural gas produced and/or imported and the amount consumed and/or exported is due to the omission of stock changes and other complicating factors.

Natural gas—proved reserves This entry is the stock of proved reserves of natural gas in cubic meters (cu m). Proved reserves are those quantities of natural gas, which, by analysis of geological and engineering data, can be estimated with a high degree of confidence to be commercially recoverable from a given date forward, from known reservoirs and under current economic conditions.

Natural hazards This entry lists potential natural disasters. For countries where volcanic activity is common, a *volcanism* subfield highlights historically active volcanoes.

Natural resources This entry lists a country's mineral, petroleum, hydropower, and other resources of commercial importance, such as rare earth elements (REEs). In general, products appear only if they make a significant contribution to the economy, or are likely to do so in the future.

Net migration rate This entry includes the figure for the difference between the number of persons entering and leaving a country during the year per 1,000 persons (based on midyear population). An excess of persons entering the country is referred to as net immigration (e.g., 3.56 migrants/1,000 population); an excess of persons leaving the country as net emigration (e.g., -9.26 migrants/1,000 population). The net migration rate indicates the contribution of migration to the overall level of population change. The net migration rate does not distinguish between economic migrants, refugees, and other types of migrants nor does it distinguish between lawful migrants and undocumented migrants.

Obesity—adult prevalence rate This entry gives the percent of a country's population considered to be obese. Obesity is defined as an adult having a Body Mass Index (BMI) greater to or equal to 30.0. BMI is calculated by taking a person's weight in kg and dividing it by the person's squared height in meters.

People—note This entry includes miscellaneous demographic information of significance not included elsewhere.

People and Society This category includes entries dealing with national identity (including ethnicities, languages, and religions), demography (a variety of population statistics) and societal

characteristics (health and education indicators).

Personal Names—Capitalization The *Factbook* capitalizes the surname or family name of individuals for the convenience of our users who are faced with a world of different cultures and naming conventions. The need for capitalization, bold type, underlining, italics, or some other indicator of the individual's surname is apparent in the following examples: MAO Zedong, Fidel CASTRO Ruz, George W. BUSH, and TUNKU SALAHUDDIN Abdul Aziz Shah ibni Al-Marhum Sultan Hisammuddin Alam Shah. By knowing the surname, a short form without all capital letters can be used with confidence as in President Castro, Chairman Mao, President Bush, or Sultan Tunku Salahuddin. The same system of capitalization is extended to the names of leaders with surnames that are not commonly used such as Queen ELIZABETH II. For Vietnamese names, the given name is capitalized because officials are referred to by their given name rather than by their surname. For example, the president of Vietnam is Tran Duc LUONG. His surname is Tran, but he is referred to by his given name—President LUONG.

Personal Names—Spelling The romanization of personal names in the *Factbook* normally follows the same transliteration system used by the US Board on Geographic Names for spelling place names. At times, however, a foreign leader expressly indicates a preference for, or the media or official documents regularly use, a romanized spelling that differs from the transliteration derived from the US Government standard. In such cases, the *Factbook* uses the alternative spelling.

Personal Names—Titles The *Factbook* capitalizes any valid title (or short form of it) immediately preceding a person's name. A title standing alone is not capitalized. Examples: President PUTIN and President OBAMA are chiefs of state. In Russia, the president is chief of state and the premier is the head of the government, while in the US, the president is both chief of state and head of government.

Petroleum See entries under **Refined petroleum products**.

Petroleum products See entries under **Refined petroleum products**.

Physicians density This entry gives the number of medical doctors (physicians), including generalist and specialist medical practitioners, per 1,000 of the population. Medical doctors are defined as doctors that study, diagnose, treat, and prevent illness, disease, injury, and other physical and mental impairments in humans through

the application of modern medicine. They also plan, supervise, and evaluate care and treatment plans by other health care providers. The World Health Organization estimates that fewer than 2.3 health workers (physicians, nurses, and midwives only) per 1,000 would be insufficient to achieve coverage of primary healthcare needs.

Pipelines This entry gives the lengths and types of pipelines for transporting products like natural gas, crude oil, or petroleum products.

Piracy Piracy is defined by the 1982 United Nations Convention on the Law of the Sea as any illegal act of violence, detention, or depredation directed against a ship, aircraft, persons, or property in a place outside the jurisdiction of any State. Such criminal acts committed in the territorial waters of a littoral state are generally considered to be armed robbery against ships. Information on piracy may be found, where applicable, in the **Transportation—note**.

Political parties and leaders This entry includes a listing of significant political parties, coalitions, and electoral lists as of each country's last legislative election, unless otherwise noted.

Political pressure groups and leaders This entry includes a listing of a country's political, social, labor, or religious organizations that are involved in politics, or that exert political pressure, but whose leaders do not stand for legislative election. International movements or organizations are generally not listed.

Population This entry gives an estimate from the US Bureau of the Census based on statistics from population censuses, vital statistics registration systems, or sample surveys pertaining to the recent past and on assumptions about future trends. The total population presents one overall measure of the potential impact of the country on the world and within its region. Note: Starting with the 1993 *Factbook*, demographic estimates for some countries (mostly African) have explicitly taken into account the effects of the growing impact of the HIV/AIDS epidemic. These countries are currently: The Bahamas, Benin, Botswana, Brazil, Burkina Faso, Burma, Burundi, Cambodia, Cameroon, Central African Republic, Democratic Republic of the Congo, Republic of the Congo, Cote d'Ivoire, Ethiopia, Gabon, Ghana, Guyana, Haiti, Honduras, Kenya, Lesotho, Malawi, Mozambique, Namibia, Nigeria, Rwanda, South Africa, Swaziland, Tanzania, Thailand, Togo, Uganda, Zambia, and Zimbabwe.

Population below poverty line National estimates of the percentage of the population falling below the poverty line are based

on surveys of sub-groups, with the results weighted by the number of people in each group. Definitions of poverty vary considerably among nations. For example, rich nations generally employ more generous standards of poverty than poor nations.

Population growth rate The average annual percent change in the population, resulting from a surplus (or deficit) of births over deaths and the balance of migrants entering and leaving a country. The rate may be positive or negative. The growth rate is a factor in determining how great a burden would be imposed on a country by the changing needs of its people for infrastructure (e.g., schools, hospitals, housing, roads), resources (e.g., food, water, electricity), and jobs. Rapid population growth can be seen as threatening by neighboring countries.

Population pyramid A population pyramid illustrates the age and sex structure of a country's population and may provide insights about political and social stability, as well as economic development. The population is distributed along the horizontal axis, with males shown on the left and females on the right. The male and female populations are broken down into 5-year age groups represented as horizontal bars along the vertical axis, with the youngest age groups at the bottom and the oldest at the top. The shape of the population pyramid gradually evolves over time based on fertility, mortality, and international migration trends.

Some distinctive types of population pyramids are:

- A **youthful distribution** has a broad base and narrow peak and is characterized by a high proportion of children and low proportion of the elderly. This population distribution results from high fertility, high mortality, low life expectancy, and high population growth. It is typical of developing countries where female education and contraceptive use are low and health care and sanitation are poor.
- A **transitional distribution** is caused by declining fertility and mortality rates, increasing life expectancy, and slowing population growth. The population has a larger proportion of working-age people relative to children and the elderly and produces a barrel-shaped pyramid, where the mid-section bulges and the base and top are narrower. The large proportion of working-age people can create a "demographic bonus" if it is educated and productively employed.
- A **mature distribution** has fairly balanced proportions of the population in the child, working-age, and elderly age groups and

will gradually form an inverted triangle population pyramid as population growth continues to fall or ceases and the proportion of older people increases. Low fertility, low mortality, and high life expectancy—made possible by the availability of advanced healthcare, family planning, sanitation, and education—lead to aging populations in industrialized countries.

Ports and terminals This entry lists major ports and terminals primarily on the basis of the amount of cargo tonnage shipped through the facilities on an annual basis. In some instances, the number of containers handled or ship visits were also considered. Most ports service multiple classes of vessels including bulk carriers (dry and liquid), break bulk cargoes (goods loaded individually in bags, boxes, crates, or drums; sometimes palletized), containers, roll-on/roll-off, and passenger ships. The listing leads off with *major seaports* handling all types of cargo. Inland *river and lake ports* are listed separately along with the river or lake name. Ports configured specifically to handle bulk cargoes are designated as *oil/gas terminals* or *dry bulk cargo ports*. As break bulk cargoes are largely transported by containers today, the entry also includes a listing of major *container ports* with the corresponding throughput measured in twenty-foot equivalent units (TEUs). Some ports are significant for handling passenger traffic and are listed as *cruise/ferry ports*. In addition to commercial traffic, many seaports also provide important military infrastructure as naval bases or dockyards.

Public debt This entry records the cumulative total of all government borrowings less repayments that are denominated in a country's home currency. Public debt should not be confused with external debt, which reflects the foreign currency liabilities of both the private and public sector and must be financed out of foreign exchange earnings.

Railways This entry states the *total* route length of the railway network and of its component parts by gauge, which is the measure of the distance between the inner sides of the load-bearing rails. The four typical types of gauges are: *broad, standard, narrow, and dual*. Other gauges are listed under *note*. Some 60% of the world's railways use the standard gauge of 1.4 m (4.7 ft). Gauges vary by country and sometimes within countries. The choice of gauge during initial construction was mainly in response to local conditions and the intent of the builder. Narrow-gauge railways were cheaper to build and could negotiate sharper curves, broad-gauge railways gave greater stability and permitted higher speeds. Standard-gauge railways were a compromise between narrow and broad gauges.

Rare earth elements Rare earth elements or REEs are 17 chemical elements that are critical in many of today's high-tech industries. They include lanthanum, cerium, praseodymium, neodymium, promethium, samarium, europium, gadolinium, terbium, dysprosium, holmium, erbium, thulium, ytterbium, lutetium, scandium, and yttrium. Typical applications for REEs include batteries in hybrid cars, fiber optic cables, flat panel displays, and permanent magnets, as well as some defense and medical products.

Reference maps This section includes world and regional maps.

Refined petroleum products—consumption This entry is the country's total consumption of refined petroleum products, in barrels per day (bbl/day). The discrepancy between the amount of refined petroleum products produced and/or imported and the amount consumed and/or exported is due to the omission of stock changes, refinery gains, and other complicating factors.

Refined petroleum products—exports This entry is the country's total exports of refined petroleum products, in barrels per day (bbl/day).

Refined petroleum products—imports This entry is the country's total imports of refined petroleum products, in barrels per day (bbl/day).

Refined petroleum products—production This entry is the country's total output of refined petroleum products, in barrels per day (bbl/day). The discrepancy between the amount of refined petroleum products produced and/or imported and the amount consumed and/or exported is due to the omission of stock changes, refinery gains, and other complicating factors.

Refugees and internally displaced persons This entry includes those persons residing in a country as *refugees* or internally displaced persons (*IDPs*). Each country's refugee entry includes only countries of origin that are the source of refugee populations of 5,000 or more. The definition of a refugee according to a United Nations Convention is "a person who is outside his/her country of nationality or habitual residence; has a well-founded fear of persecution because of his/her race, religion, nationality, membership in a particular social group or political opinion; and is unable or unwilling to avail himself/herself of the protection of that country, or to return there, for fear of persecution." The UN established the Office of the UN High Commissioner for Refugees (UNHCR) in 1950 to handle refugee

matters worldwide. The UN Relief and Works Agency for Palestine Refugees in the Near East (UNRWA) has a different operational definition for a Palestinian refugee: “a person whose normal place of residence was Palestine during the period 1 June 1946 to 15 May 1948 and who lost both home and means of livelihood as a result of the 1948 conflict.” However, UNHCR also assists some 400,000 Palestinian refugees not covered under the UNRWA definition. The term “internally displaced person” is not specifically covered in the UN Convention; it is used to describe people who have fled their homes for reasons similar to refugees, but who remain within their own national territory and are subject to the laws of that state.

Religions This entry is an ordered listing of religions by adherents starting with the largest group and sometimes includes the percent of total population. The core characteristics and beliefs of the world’s major religions are described below.

Baha’i—Founded by Mirza Husayn-Ali (known as Baha’u’llah) in Iran in 1852, Baha’i faith emphasizes monotheism and believes in one eternal transcendent God. Its guiding focus is to encourage the unity of all peoples on the earth so that justice and peace may be achieved on earth. Baha’i revelation contends the prophets of major world religions reflect some truth or element of the divine, believes all were manifestations of God given to specific communities in specific times, and that Baha’u’llah is an additional prophet meant to call all humankind. Bahais are an open community, located worldwide, with the greatest concentration of believers in South Asia.

Buddhism—Religion or philosophy inspired by the 5th century B.C. teachings of Siddhartha Gautama (also known as Gautama Buddha “the enlightened one”). Buddhism focuses on the goal of spiritual enlightenment centered on an understanding of Gautama Buddha’s Four Noble Truths on the nature of suffering, and on the Eightfold Path of spiritual and moral practice, to break the cycle of suffering of which we are a part. Buddhism ascribes to a karmic system of rebirth. Several schools and sects of Buddhism exist, differing often on the nature of the Buddha, the extent to which enlightenment can be achieved—for one or for all, and by whom—religious orders or laity.

Basic Groupings

Theravada Buddhism: The oldest Buddhist school, Theravada is practiced mostly in Sri Lanka, Cambodia, Laos, Burma, and Thailand, with minority representation elsewhere in Asia and the West. Theravadans follow the Pali Canon of Buddha’s teachings, and believe that one may escape the cycle of rebirth, worldly

attachment, and suffering for oneself; this process may take one or several lifetimes.

Mahayana Buddhism, including subsets Zen and Tibetan (Lamaistic) Buddhism: Forms of Mahayana Buddhism are common in East Asia and Tibet, and parts of the West. Mahayanas have additional scriptures beyond the Pali Canon and believe the Buddha is eternal and still teaching. Unlike Theravada Buddhism, Mahayana schools maintain the Buddha-nature is present in all beings and all will ultimately achieve enlightenment.

Hoa Hao: a minority tradition of Buddhism practiced in Vietnam that stresses lay participation, primarily by peasant farmers; it eschews expensive ceremonies and temples and relocates the primary practices into the home.

Christianity—Descending from Judaism, Christianity's central belief maintains Jesus of Nazareth is the promised messiah of the Hebrew Scriptures, and that his life, death, and resurrection are salvific for the world. Christianity is one of the three monotheistic Abrahamic faiths, along with Islam and Judaism, which traces its spiritual lineage to Abraham of the Hebrew Scriptures. Its sacred texts include the Hebrew Bible and the New Testament (or the Christian Gospels).

Basic Groupings

Catholicism (or Roman Catholicism): This is the oldest established western Christian church and the world's largest single religious body. It is supranational, and recognizes a hierarchical structure with the Pope, or Bishop of Rome, as its head, located at the Vatican. Catholics believe the Pope is the divinely ordered head of the Church from a direct spiritual legacy of Jesus' apostle Peter. Catholicism is comprised of 23 particular Churches, or Rites—one Western (Roman or Latin-Rite) and 22 Eastern. The Latin Rite is by far the largest, making up about 98% of Catholic membership. Eastern-Rite Churches, such as the Maronite Church and the Ukrainian Catholic Church, are in communion with Rome although they preserve their own worship traditions and their immediate hierarchy consists of clergy within their own rite. The Catholic Church has a comprehensive theological and moral doctrine specified for believers in its catechism, which makes it unique among most forms of Christianity.

Mormonism (including the Church of Jesus Christ of Latter-Day Saints): Originating in 1830 in the United States under Joseph Smith, Mormonism is not characterized as a form of Protestant Christianity because it claims additional revealed Christian scriptures after the Hebrew Bible and New Testament. The Book

of Mormon maintains there was an appearance of Jesus in the New World following the Christian account of his resurrection, and that the Americas are uniquely blessed continents. Mormonism believes earlier Christian traditions, such as the Roman Catholic, Orthodox, and Protestant reform faiths, are apostasies and that Joseph Smith's revelation of the Book of Mormon is a restoration of true Christianity. Mormons have a hierarchical religious leadership structure, and actively proselytize their faith; they are located primarily in the Americas and in a number of other Western countries.

Jehovah's Witnesses structure their faith on the Christian Bible, but their rejection of the Trinity is distinct from mainstream Christianity. They believe that a Kingdom of God, the Theocracy, will emerge following Armageddon and usher in a new earthly society. Adherents are required to evangelize and to follow a strict moral code.

Orthodox Christianity: The oldest established eastern form of Christianity, the Holy Orthodox Church, has a ceremonial head in the Bishop of Constantinople (Istanbul), also known as a Patriarch, but its various regional forms (e.g., Greek Orthodox, Russian Orthodox, Serbian Orthodox, Ukrainian Orthodox) are autocephalous (independent of Constantinople's authority, and have their own Patriarchs). Orthodox churches are highly nationalist and ethnic. The Orthodox Christian faith shares many theological tenets with the Roman Catholic Church, but diverges on some key premises and does not recognize the governing authority of the Pope.

Protestant Christianity: Protestant Christianity originated in the 16th century as an attempt to reform Roman Catholicism's practices, dogma, and theology. It encompasses several forms or denominations which are extremely varied in structure, beliefs, relationship to state, clergy, and governance. Many protestant theologies emphasize the primary role of scripture in their faith, advocating individual interpretation of Christian texts without the mediation of a final religious authority such as the Roman Pope. The oldest Protestant Christianities include Lutheranism, Calvinism (Presbyterians), and Anglican Christianity (Episcopalians), which have established liturgies, governing structure, and formal clergy. Other variants on Protestant Christianity, including Pentecostal movements and independent churches, may lack one or more of these elements, and their leadership and beliefs are individualized and dynamic.

Hinduism—Originating in the Vedic civilization of India (second and first millennium B.C.), Hinduism is an extremely diverse set

of beliefs and practices with no single founder or religious authority. Hinduism has many scriptures; the Vedas, the Upanishads, and the Bhagavad-Gita are among some of the most important. Hindus may worship one or many deities, usually with prayer rituals within their own home. The most common figures of devotion are the gods Vishnu, Shiva, and a mother goddess, Devi. Most Hindus believe the soul, or *atman*, is eternal, and goes through a cycle of birth, death, and rebirth (*samsara*) determined by one's positive or negative karma, or the consequences of one's actions. The goal of religious life is to learn to act so as to finally achieve liberation (*moksha*) of one's soul, escaping the rebirth cycle.

Islam—The third of the monotheistic Abrahamic faiths, Islam originated with the teachings of Muhammad in the 7th century. Muslims believe Muhammad is the final of all religious prophets (beginning with Abraham) and that the Qu'ran, which is the Islamic scripture, was revealed to him by God. Islam derives from the word submission, and obedience to God is a primary theme in this religion. In order to live an Islamic life, believers must follow the five pillars, or tenets, of Islam, which are the testimony of faith (*shahada*), daily prayer (*salah*), giving alms (*zakah*), fasting during Ramadan (*sawm*), and the pilgrimage to Mecca (*hajj*).

Basic Groupings

The two primary branches of Islam are Sunni and Shia, which split from each other over a religio-political leadership dispute about the rightful successor to Muhammad. The Shia believe Muhammad's cousin and son-in-law, Ali, was the only divinely ordained Imam (religious leader), while the Sunni maintain the first three caliphs after Muhammad were also legitimate authorities. In modern Islam, Sunnis and Shia continue to have different views of acceptable schools of Islamic jurisprudence, and who is a proper Islamic religious authority. Islam also has an active mystical branch, Sufism, with various Sunni and Shia subsets.

Sunni Islam accounts for over 75% of the world's Muslim population. It recognizes the Abu Bakr as the first caliph after Muhammad. Sunni has four schools of Islamic doctrine and law—Hanafi, Maliki, Shafi'i, and Hanbali—which uniquely interpret the *Hadith*, or recorded oral traditions of Muhammad. A Sunni Muslim may elect to follow any one of these schools, as all are considered equally valid.

Shia Islam represents 10-20% of Muslims worldwide, and its distinguishing feature is its reverence for Ali as an infallible,

divinely inspired leader, and as the first Imam of the Muslim community after Muhammad. A majority of Shia are known as “Twelvers,” because they believe that the 11 familial successor imams after Muhammad culminate in a 12th Imam (al-Mahdi) who is hidden in the world and will reappear at its end to redeem the righteous.

Variants

Ismaili faith: A sect of Shia Islam, its adherents are also known as “Seveners,” because they believe that the rightful seventh Imam in Islamic leadership was Isma’il, the elder son of Imam Jafar al-Sadiq. Ismaili tradition awaits the return of the seventh Imam as the Mahdi, or Islamic messianic figure. Ismailis are located in various parts of the world, particularly South Asia and the Levant.

Alawi faith: Another Shia sect of Islam, the name reflects followers’ devotion to the religious authority of Ali. Alawites are a closed, secretive religious group who assert they are Shia Muslims, although outside scholars speculate their beliefs may have a syncretic mix with other faiths originating in the Middle East. Alawis live mostly in Syria, Lebanon, and Turkey.

Druze faith: A highly secretive tradition and a closed community that derives from the Ismaili sect of Islam; its core beliefs are thought to emphasize a combination of Gnostic principles believing that the Fatimid caliph, al-Hakin, is the one who embodies the key aspects of goodness of the universe, which are, the intellect, the word, the soul, the preceder, and the follower. The Druze have a key presence in Syria, Lebanon, and Israel.

Jainism—Originating in India, Jain spiritual philosophy believes in an eternal human soul, the eternal universe, and a principle of “the own nature of things.” It emphasizes compassion for all living things, seeks liberation of the human soul from reincarnation through enlightenment, and values personal responsibility due to the belief in the immediate consequences of one’s behavior. Jain philosophy teaches non-violence and prescribes vegetarianism for monks and laity alike; its adherents are a highly influential religious minority in Indian society.

Judaism—One of the first known monotheistic religions, likely dating to between 2000-1500 B.C., Judaism is the native faith of the Jewish people, based upon the belief in a covenant of responsibility between a sole omnipotent creator God and Abraham, the patriarch of Judaism’s Hebrew Bible, or *Tanakh*. Divine revelation of principles and prohibitions in the Hebrew Scriptures form the basis of Jewish law, or *halakhah*, which is a key component of the faith. While there are extensive traditions

of Jewish halakhic and theological discourse, there is no final dogmatic authority in the tradition. Local communities have their own religious leadership. Modern Judaism has three basic categories of faith: Orthodox, Conservative, and Reform/Liberal. These differ in their views and observance of Jewish law, with the Orthodox representing the most traditional practice, and Reform/Liberal communities the most accommodating of individualized interpretations of Jewish identity and faith.

Shintoism—A native animist tradition of Japan, Shinto practice is based upon the premise that every being and object has its own spirit or *kami*. Shinto practitioners worship several particular *kamis*, including the *kamis* of nature, and families often have shrines to their ancestors' *kamis*. Shintoism has no fixed tradition of prayers or prescribed dogma, but is characterized by individual ritual. Respect for the *kamis* in nature is a key Shinto value. Prior to the end of World War II, Shinto was the state religion of Japan, and bolstered the cult of the Japanese emperor.

Sikhism—Founded by the Guru Nanak (born 1469), Sikhism believes in a non-anthropomorphic, supreme, eternal, creator God; centering one's devotion to God is seen as a means of escaping the cycle of rebirth. Sikhs follow the teachings of Nanak and nine subsequent gurus. Their scripture, the Guru Granth Sahib—also known as the Adi Granth—is considered the living Guru, or final authority of Sikh faith and theology. Sikhism emphasizes equality of humankind and disavows caste, class, or gender discrimination.

Taoism—Chinese philosophy or religion based upon Lao Tzu's Tao Te Ching, which centers on belief in the Tao, or the way, as the flow of the universe and the nature of things. Taoism encourages a principle of non-force, or wu-wei, as the means to live harmoniously with the Tao. Taoists believe the esoteric world is made up of a perfect harmonious balance and nature, while in the manifest world—particularly in the body—balance is distorted. The Three Jewels of the Tao—compassion, simplicity, and humility—serve as the basis for Taoist ethics.

Zoroastrianism—Originating from the teachings of Zoroaster in about the 9th or 10th century B.C., Zoroastrianism may be the oldest continuing creedal religion. Its key beliefs center on a transcendent creator God, Ahura Mazda, and the concept of free will. The key ethical tenets of Zoroastrianism expressed in its scripture, the Avesta, are based on a dualistic worldview where one may prevent chaos if one chooses to serve God and exercises good thoughts, good words, and good deeds. Zoroastrianism is generally a closed religion and members are almost always born

to Zoroastrian parents. Prior to the spread of Islam, Zoroastrianism dominated greater Iran. Today, though a minority, Zoroastrians remain primarily in Iran, India (where they are known as Parsi), and Pakistan.

Traditional beliefs

Animism: the belief that non-human entities contain souls or spirits.

Badimo: a form of ancestor worship of the Tswana people of Botswana.

Confucianism: an ideology that humans are perfectible through self-cultivation and self-creation; developed from teachings of the Chinese philosopher Confucius. Confucianism has strongly influenced the culture and beliefs of East Asian countries, including China, Japan, Korea, Singapore, Taiwan, and Vietnam.

Inuit beliefs are a form of shamanism (see below) based on animistic principles of the Inuit or Eskimo peoples.

Kirant: the belief system of the Kirat, a people who live mainly in the Himalayas of Nepal. It is primarily a form of polytheistic shamanism, but includes elements of animism and ancestor worship.

Pagan is a blanket term used to describe many unconnected belief practices throughout history, usually in reference to religions outside of the Abrahamic category (monotheistic faiths like Judaism, Christianity, and Islam).

Shamanism: beliefs and practices promoting communication with the spiritual world. Shamanistic beliefs are organized around a shaman or medicine man who—as an intermediary between the human and spirit world—is believed to be able to heal the sick (by healing their souls), communicate with the spirit world, and help souls into the afterlife through the practice of entering a trance. In shaman-based religions, the shaman is also responsible for leading sacred rites.

Spiritualism: the belief that souls and spirits communicate with the living usually through intermediaries called mediums.

Syncretic (fusion of diverse religious beliefs and practices)

Cao Dai: a nationalistic Vietnamese sect, officially established in 1926, that draws practices and precepts from Confucianism, Taoism, Buddhism, and Catholicism.

Chondogyo: or the religion of the Heavenly Way, is based on Korean shamanism, Buddhism, and Korean folk traditions, with some elements drawn from Christianity. Formulated in the 1860s, it holds that God lives in all of us and strives to convert society

into a paradise on earth, populated by believers transformed into intelligent moral beings with a high social conscience.

Kimbanguist: a puritan form of the Baptist denomination founded by Simon Kimbangu in the 1920s in what is now the Democratic Republic of Congo. Adherents believe that salvation comes through Jesus' death and resurrection, like Christianity, but additionally that living a spiritually pure life following strict codes of conduct is required for salvation.

Modekngei: a hybrid of Christianity and ancient Palauan culture and oral traditions founded around 1915 on the island of Babeldaob. Adherents simultaneously worship Jesus Christ and Palauan goddesses.

Rastafarian: an afro-centrist ideology and movement based on Christianity that arose in Jamaica in the 1930s; it believes that Haile Selassie I, Emperor of Ethiopia from 1930-74, was the incarnation of the second coming of Jesus.

Santeria: practiced in Cuba, the merging of the Yoruba religion of Nigeria with Roman Catholicism and native Indian traditions. Its practitioners believe that each person has a destiny and eventually transcends to merge with the divine creator and source of all energy, Olorun.

Voodoo/Vodun: a form of spirit and ancestor worship combined with some Christian faiths, especially Catholicism. Haitian and Louisiana Voodoo, which have included more Catholic practices, are separate from West African Vodun, which has retained a focus on spirit worship.

Non-religious

Agnosticism: the belief that most things are unknowable. In regard to religion it is usually characterized as neither a belief nor non belief in a deity.

Atheism: the belief that there are no deities of any kind.

Reserves of foreign exchange and gold This entry gives the dollar value for the stock of all financial assets that are available to the central monetary authority for use in meeting a country's balance of payments needs as of the end-date of the period specified. This category includes not only foreign currency and gold, but also a country's holdings of Special Drawing Rights in the International Monetary Fund, and its reserve position in the Fund.

Roadways This entry gives the *total* length of the road network and includes the length of the *paved* and *unpaved* portions.

Sanitation facility access This entry provides information

about access to improved or unimproved sanitation facilities available to segments of the population of a country. *Improved* sanitation—use of any of the following facilities: flush or pour-flush to a piped sewer system, septic tank or pit latrine; ventilated improved pit (VIP) latrine; pit latrine with slab; or a composting toilet, *unimproved* sanitation—use of any of the following facilities: flush or pour-flush not piped to a sewer system, septic tank or pit latrine; pit latrine without a slab or open pit; bucket; hanging toilet or hanging latrine; shared facilities of any type; no facilities; or bush or field.

School life expectancy (primary to tertiary education) School life expectancy (SLE) is the total number of years of schooling (primary to tertiary) that a child can expect to receive, assuming that the probability of his or her being enrolled in school at any particular future age is equal to the current enrollment ratio at that age. Caution must be maintained when utilizing this indicator in international comparisons. For example, a year or grade completed in one country is not necessarily the same in terms of educational content or quality as a year or grade completed in another country. SLE represents the expected number of years of schooling that will be completed, including years spent repeating one or more grades.

Sex ratio This entry includes the number of males for each female in five age groups—at birth, under 15 years, 15-64 years, 65 years and over, and for the total population. Sex ratio at birth has recently emerged as an indicator of certain kinds of sex discrimination in some countries. For instance, high sex ratios at birth in some Asian countries are now attributed to sex-selective abortion and infanticide due to a strong preference for sons. This will affect future marriage patterns and fertility patterns. Eventually, it could cause unrest among young adult males who are unable to find partners.

Stateless person Statelessness is the condition whereby an individual is not considered a national by any country. Stateless people are denied basic rights, such as access to employment, housing, education, healthcare, and pensions, and they may be unable to vote, own property, open a bank account, or legally register a marriage or birth. They may also be vulnerable to arbitrary treatment and human trafficking. In at least 30 states, women cannot pass their nationality on to their children. In these countries, if a child's father is foreign, stateless, or absent, the child usually becomes stateless. Estimates of the number of stateless people are inherently imprecise because few countries have procedures to identify them; the UN approximates that there are 12 million stateless people worldwide. Stateless people are

counted in a country's overall population figure if they have lived there for a year.

Stock of broad money This entry covers all of “Narrow money,” plus the total quantity of time and savings deposits, credit union deposits, institutional money market funds, short-term repurchase agreements between the central bank and commercial deposit banks, and other large liquid assets held by nonbank financial institutions, state and local governments, nonfinancial public enterprises, and the private sector of the economy. National currency units have been converted to US dollars at the closing exchange rate for the date of the information. Because of exchange rate movements, changes in money stocks measured in national currency units may vary significantly from those shown in US dollars, and caution is urged when making comparisons over time in US dollars. In addition to serving as a medium of exchange, broad money includes assets that are slightly less liquid than narrow money and the assets tend to function as a “store of value”—a means of holding wealth.

Stock of direct foreign investment—abroad This entry gives the cumulative US dollar value of all investments in foreign countries made directly by residents—primarily companies—of the home country, as of the end of the time period indicated. Direct investment excludes investment through purchase of shares.

Stock of direct foreign investment—at home This entry gives the cumulative US dollar value of all investments in the home country made directly by residents—primarily companies—of other countries as of the end of the time period indicated. Direct investment excludes investment through purchase of shares.

Stock of domestic credit This entry is the total quantity of credit, denominated in the domestic currency, provided by financial institutions to the central bank, state and local governments, public non-financial corporations, and the private sector. The national currency units have been converted to US dollars at the closing exchange rate on the date of the information.

Stock of narrow money This entry, also known as “M1,” comprises the total quantity of currency in circulation (notes and coins) plus demand deposits denominated in the national currency held by nonbank financial institutions, state and local governments, nonfinancial public enterprises, and the private sector of the economy, measured at a specific point in time. National currency units have been converted to US dollars at the closing exchange rate for the date

of the information. Because of exchange rate movements, changes in money stocks measured in national currency units may vary significantly from those shown in US dollars, and caution is urged when making comparisons over time in US dollars. Narrow money consists of more liquid assets than broad money and the assets generally function as a “medium of exchange” for an economy.

Suffrage This entry gives the age at enfranchisement and whether the right to vote is universal or restricted.

Taxes and other revenues This entry records total taxes and other revenues received by the national government during the time period indicated, expressed as a percent of GDP. Taxes include personal and corporate income taxes, value added taxes, excise taxes, and tariffs. Other revenues include social contributions—such as payments for social security and hospital insurance—grants, and net revenues from public enterprises. Normalizing the data, by dividing total revenues by GDP, enables easy comparisons across countries, and provides an average rate at which all income (GDP) is paid to the national level government for the supply of public goods and services.

Telephone numbers All telephone numbers in *The World Factbook* consist of the country code in brackets, the city or area code (where required) in parentheses, and the local number. The one component that is not presented is the international access code, which varies from country to country. For example, an international direct dial telephone call placed from the US to Madrid, Spain, would be as follows: 011 [34] (1) 577-xxxx, where 011 is the international access code for station-to-station calls; 01 is for calls other than station-to-station calls, [34] is the country code for Spain, (1) is the city code for Madrid, 577 is the local exchange, and xxxx is the local telephone number. An international direct dial telephone call placed from another country to the US would be as follows: international access code +[1] (202) 939-xxxx, where [1] is the country code for the US, (202) is the area code for Washington, DC, 939 is the local exchange, and xxxx is the local telephone number.

Telephone system This entry includes a brief general assessment of the system with details on the domestic and international components. The following terms and abbreviations are used throughout the entry:

Arabsat—Arab Satellite Communications Organization (Riyadh, Saudi Arabia).

Autodin—Automatic Digital Network (US Department of Defense).

CB—citizen's band mobile radio communications.

Cellular telephone system—the telephones in this system are radio transceivers, with each instrument having its own private radio frequency and sufficient radiated power to reach the booster station in its area (cell), from which the telephone signal is fed to a telephone exchange.

Central American Microwave System—a trunk microwave radio relay system that links the countries of Central America and Mexico with each other.

Coaxial cable—a multichannel communication cable consisting of a central conducting wire, surrounded by and insulated from a cylindrical conducting shell; a large number of telephone channels can be made available within the insulated space by the use of a large number of carrier frequencies.

Comsat—Communications Satellite Corporation (US).

DSN—Defense Switched Network (formerly Automatic Voice Network or Autovon); basic general-purpose, switched voice network of the Defense Communications System (US Department of Defense).

Eutelsat—European Telecommunications Satellite Organization (Paris).

Fiber-optic cable—a multichannel communications cable using a thread of optical glass fibers as a transmission medium in which the signal (voice, video, etc.) is in the form of a coded pulse of light.

GSM—a global system for mobile (cellular) communications devised by the Groupe Special Mobile of the pan-European standardization organization, Conference Europeenne des Posts et Telecommunications (CEPT) in 1982.

HF—high frequency; any radio frequency in the 3,000-to 30,000-kHz range.

Inmarsat—International Maritime Satellite Organization (London); provider of global mobile satellite communications for commercial, distress, and safety applications at sea, in the air, and on land.

Intelsat—International Telecommunications Satellite Organization (Washington, DC).

Intersputnik—International Organization of Space Communications (Moscow); first established in the former Soviet Union and the East European countries, it is now marketing its services worldwide with earth stations in North America, Africa, and East Asia.

Landline—communication wire or cable of any sort that is installed on poles or buried in the ground.

Marecs—Maritime European Communications Satellite used in the Inmarsat system on lease from the European Space Agency.

Marisat—satellites of the Comsat Corporation that participate in the Inmarsat system.

Medarabtel—the Middle East Telecommunications Project of the International Telecommunications Union (ITU) providing a modern telecommunications network, primarily by microwave radio relay, linking Algeria, Djibouti, Egypt, Jordan, Libya, Morocco, Saudi Arabia, Somalia, Sudan, Syria, Tunisia, and Yemen; it was initially started in Morocco in 1970 by the Arab Telecommunications Union (ATU) and was known at that time as the Middle East Mediterranean Telecommunications Network.

Microwave radio relay—transmission of long distance telephone calls and television programs by highly directional radio microwaves that are received and sent on from one booster station to another on an optical path.

NMT—Nordic Mobile Telephone; an analog cellular telephone system that was developed jointly by the national telecommunications authorities of the Nordic countries (Denmark, Finland, Iceland, Norway, and Sweden).

Orbita—a Russian television service; also the trade name of a packet-switched digital telephone network.

Radiotelephone communications—the two-way transmission and reception of sounds by broadcast radio on authorized frequencies using telephone handsets.

PanAmSat—PanAmSat Corporation (Greenwich, CT).

SAFE—South African Far East Cable

Satellite communication system—a communication system consisting of two or more earth stations and at least one satellite that provide long distance transmission of voice, data, and television; the system usually serves as a trunk connection between telephone exchanges; if the earth stations are in the same country, it is a domestic system.

Satellite earth station—a communications facility with a microwave radio transmitting and receiving antenna and required receiving and transmitting equipment for communicating with satellites.

Satellite link—a radio connection between a satellite and an earth station permitting communication between them, either one-way (down link from satellite to earth station—television

receive-only transmission) or two-way (telephone channels).

SHF—super high frequency; any radio frequency in the 3,000-to 30,000-MHz range.

Shortwave—radio frequencies (from 1.605 to 30 MHz) that fall above the commercial broadcast band and are used for communication over long distances.

Solidaridad—geosynchronous satellites in Mexico's system of international telecommunications in the Western Hemisphere.

Statsionar—Russia's geostationary system for satellite telecommunications.

Submarine cable—a cable designed for service under water.

TAT—Trans-Atlantic Telephone; any of a number of high-capacity submarine coaxial telephone cables linking Europe with North America.

Telefax—facsimile service between subscriber stations via the public switched telephone network or the international Datel network.

Telegraph—a telecommunications system designed for unmodulated electric impulse transmission.

Telex—a communication service involving teletypewriters connected by wire through automatic exchanges.

Tropospheric scatter—a form of microwave radio transmission in which the troposphere is used to scatter and reflect a fraction of the incident radio waves back to earth; powerful, highly directional antennas are used to transmit and receive the microwave signals; reliable over-the-horizon communications are realized for distances up to 600 miles in a single hop; additional hops can extend the range of this system for very long distances.

Trunk network—a network of switching centers, connected by multichannel trunk lines.

UHF—ultra high frequency; any radio frequency in the 300-to 3,000-MHz range.

VHF—very high frequency; any radio frequency in the 30-to 300-MHz range.

Telephones—main lines in use This entry gives the total number of main telephone lines in use.

Telephones—mobile cellular This entry gives the total number of mobile cellular telephone subscribers.

Terminology Due to the highly structured nature of the *Factbook* database, some collective generic terms have to be used. For example,

the word **Country** in the **Country name** entry refers to a wide variety of dependencies, areas of special sovereignty, uninhabited islands, and other entities in addition to the traditional countries or independent states. **Military** is also used as an umbrella term for various civil defense, security, and defense activities in many entries. The **Independence** entry includes the usual colonial independence dates and former ruling states as well as other significant nationhood dates such as the traditional founding date or the date of unification, federation, confederation, establishment, or state succession that are not strictly independence dates. Dependent areas have the nature of their dependency status noted in this same entry.

Terrain This entry contains a brief description of the topography.

Time difference This entry is expressed in *The World Factbook* in two ways. First, it is stated as the difference in hours between the capital of an entity and **Coordinated Universal Time (UTC)** during Standard Time. Additionally, the difference in time between the capital of an entity and that observed in Washington, D.C. is also provided. Note that the time difference assumes both locations are simultaneously observing Standard Time or Daylight Saving Time.

Time zones Ten countries (Australia, Brazil, Canada, Indonesia, Kazakhstan, Mexico, New Zealand, Russia, Spain, and the United States) and the island of Greenland observe more than one official time depending on the number of designated time zones within their boundaries. An illustration of time zones throughout the world and within countries can be seen in the Standard Time Zones of the World map included in the **Reference Maps** section of *The World Factbook*.

Total fertility rate This entry gives a figure for the average number of children that would be born per woman if all women lived to the end of their childbearing years and bore children according to a given fertility rate at each age. The total fertility rate (TFR) is a more direct measure of the level of fertility than the crude birth rate, since it refers to births per woman. This indicator shows the potential for population change in the country. A rate of two children per woman is considered the replacement rate for a population, resulting in relative stability in terms of total numbers. Rates above two children indicate populations growing in size and whose median age is declining. Higher rates may also indicate difficulties for families, in some situations, to feed and educate their children and for women to enter the labor force. Rates below two children indicate populations decreasing in size and growing older. Global fertility rates are in general decline and this trend is most pronounced in industrialized

countries, especially Western Europe, where populations are projected to decline dramatically over the next 50 years.

Total renewable water resources This entry provides the long-term average water availability for a country in cubic kilometers of precipitation, recharged ground water, and surface inflows from surrounding countries. The values have been adjusted to account for overlap resulting from surface flow recharge of groundwater sources. Total renewable water resources provides the water total available to a country but does not include water resource totals that have been reserved for upstream or downstream countries through international agreements. Note that these values are averages and do not accurately reflect the total available in any given year. Annual available resources can vary greatly due to short-term and longterm climatic and weather variations.

Trafficking in persons Trafficking in persons is modern-day slavery, involving victims who are forced, defrauded, or coerced into labor or sexual exploitation. The International Labor Organization (ILO), the UN agency charged with addressing labor standards, employment, and social protection issues, estimates that 12.3 million people worldwide are enslaved in forced labor, bonded labor, forced child labor, sexual servitude, and involuntary servitude at any given time. Human trafficking is a multi-dimensional threat, depriving people of their human rights and freedoms, risking global health, promoting social breakdown, inhibiting development by depriving countries of their human capital, and helping fuel the growth of organized crime. In 2000, the US Congress passed the Trafficking Victims Protection Act (TVPA), reauthorized in 2003 and 2005, which provides tools for the US to combat trafficking in persons, both domestically and abroad. One of the law's key components is the creation of the US Department of State's annual *Trafficking in Persons Report*, which assesses the government response (i.e., the *current situation*) in some 150 countries with a significant number of victims trafficked across their borders who are recruited, harbored, transported, provided, or obtained for forced labor or sexual exploitation. Countries in the annual report are rated in three tiers, based on government efforts to combat trafficking. The countries identified in this entry are those listed in the *2010 Trafficking in Persons Report as Tier 2 Watch List or Tier 3* based on the following tier rating definitions:

Tier 2 Watch List countries do not fully comply with the minimum standards for the elimination of trafficking but are making significant efforts to do so, and meet one of the following criteria:

1. *they display high or significantly increasing number of victims,*
2. *they have failed to provide evidence of increasing efforts to combat trafficking in persons, or,*
3. *they have committed to take action over the next year.*

Tier 3 countries neither satisfy the minimum standards for the elimination of trafficking nor demonstrate a significant effort to do so. Countries in this tier are subject to potential non-humanitarian and non-trade sanctions.

Transnational issues This category includes four entries—**Disputes—international**, **Refugees and internally displaced persons**, **Trafficking in persons**, and **Illicit drugs**—that deal with current issues going beyond national boundaries.

Transportation This category includes the entries dealing with the means for movement of people and goods.

Transportation—note This entry includes miscellaneous transportation information of significance not included elsewhere.

Unemployment rate This entry contains the percent of the labor force that is without jobs. Substantial underemployment might be noted.

Unemployment, youth ages 15-24 This entry gives the percent of the total labor force ages 15-24 unemployed during a specified year.

Urbanization This entry provides two measures of the degree of urbanization of a population. The first, *urban population*, describes the percentage of the total population living in urban areas, as defined by the country. The second, *rate of urbanization*, describes the projected average rate of change of the size of the urban population over the given period of time. Additionally, the World entry includes a list of the *ten largest urban agglomerations*. An *urban agglomeration* is defined as comprising the city or town proper and also the suburban fringe or thickly settled territory lying outside of, but adjacent to, the boundaries of the city.

UTC (Coordinated Universal Time) See entry for Coordinated Universal Time.

Waterways This entry gives the total length of navigable rivers, canals, and other inland bodies of water.

Weights and Measures This information is presented in

Appendix G: Weights and Measures and includes mathematical notations (mathematical powers and names), metric interrelationships (prefix; symbol; length, weight, or capacity; area; volume), and standard conversion factors.

Years All year references are for the calendar year (CY) unless indicated as fiscal year (FY). The calendar year is an accounting period of 12 months from 1 January to 31 December. The fiscal year is an accounting period of 12 months other than 1 January to 31 December.

Background: Ahmad Shah DURRANI unified the Pashtun tribes and founded Afghanistan in 1747. The country served as a buffer between the British and Russian Empires until it won independence from notional British control in 1919. A brief experiment in democracy ended in a 1973 coup and a 1978 communist counter coup. The Soviet Union invaded in 1979 to support the tottering Afghan communist regime, touching off a long and destructive war. The USSR withdrew in 1989 under relentless pressure by internationally supported anticommunist mujahidin rebels. A series of subsequent civil wars saw Kabul finally fall in 1996 to the Taliban, a hardline Pakistani sponsored movement that emerged in 1994 to end the country's civil war and anarchy. Following the 11 September 2001

terrorist attacks, a US, Allied, and anti-Taliban Northern Alliance military action toppled the Taliban for sheltering Usama BIN LADIN. A UN-sponsored Bonn Conference in 2001 established a process for political reconstruction that included the adoption of a new constitution, a presidential election in 2004, and National Assembly elections in 2005. In December 2004, Hamid KARZAI became the first democratically elected president of Afghanistan, and the National Assembly was inaugurated the following December. KARZAI was reelected in August 2009 for a second term. The 2014 presidential election was the country's first to include a runoff, which featured the top two vote getters from the first round, Abdullah ABDULLAH and Ashraf GHANI. Throughout the summer of 2014, their campaigns disputed the results and traded accusations of fraud, leading to a US led diplomatic intervention that included a full vote audit as well as political negotiations between the two camps. In September 2014, GHANI and ABDULLAH agreed to form the Government of National Unity, with GHANI inaugurated as President and ABDULLAH elevated to the newly created position of chief executive officer. The day after the inauguration, the GHANI administration signed the US-Afghan Bilateral Security Agreement and NATO Status of Forces Agreement, which provide the legal basis for the post-2014 international military presence in Afghanistan. Despite gains toward building a stable central government, the Taliban remains a serious challenge for the Afghan Government in almost every province. The Taliban still considers itself the rightful government of Afghanistan, and it remains a capable and confident insurgent force despite reports in 2015 that its founder and spiritual leader, Mullah Mohammad OMAR, died in 2013.

Flag description: three equal vertical bands of black (hoist side), red, and green, with the national emblem in white centered on the red band and slightly overlapping the other two bands; the center of the emblem features a mosque with pulpit and flags on either side, below the mosque are numerals for the solar year 1298 (1919 in the Gregorian calendar, the year of Afghan independence from the UK); this central image is circled by a border consisting of sheaves of wheat on the left and right, in the upper center is an Arabic inscription of the Shahada (Muslim creed) below which are rays of the rising sun over the Takbir (Arabic expression meaning “God is great”), and at bottom center is a scroll bearing the name Afghanistan; black signifies the past, red is for the blood shed for independence, and green can represent either hope for the future, agricultural prosperity, or Islam

note: Afghanistan had more changes to its national flag in the 20th century than any other country; the colors black, red, and green appeared on most of them

National symbol(s): lion; national colors: red, green, black

National anthem: name: “Milli Surood” (National Anthem)

lyrics/music: Abdul Bari JAHANI/Babrak WASA

note: adopted 2006; the 2004 constitution of the post-Taliban government mandated that a new national anthem should be written containing the phrase “Allahu Akbar” (God is Greatest) and mentioning the names of Afghanistan’s ethnic groups

Economy overview: Afghanistan's economy is recovering from decades of conflict. The economy has improved significantly since the fall of the Taliban regime in 2001 largely because of the infusion of international assistance, the recovery of the agricultural sector, and service sector growth. Despite the progress of the past few years, Afghanistan is extremely poor, landlocked, and highly dependent on foreign aid. Much of the population continues to suffer from shortages of housing, clean water, electricity, medical care, and jobs. Criminality, insecurity, weak governance, lack of infrastructure, and the Afghan Government's difficulty in extending rule of law to all parts of the country pose challenges to future economic growth. Afghanistan's living standards are among the lowest in the world. The international community remains committed to Afghanistan's development, pledging over \$67 billion at nine donors' conferences between 2003 and 2010. In July 2012, the donors at the Tokyo conference pledged an additional \$16 billion in civilian aid through 2015. Despite this help, the Government of Afghanistan will need to overcome a number of challenges, including low revenue collection, anemic job creation, high levels of corruption, weak government capacity, and poor public infrastructure. Afghanistan's growth rate slowed markedly in 2014–15. The drawdown of international security forces that started in 2014 has negatively affected economic growth, as a substantial portion of commerce, especially in the services sector, has catered to the ongoing international troop presence in the country. Afghan President Ashraf GHANI Ahmadzai is dedicated to instituting economic reforms to include improving revenue collection and fighting corruption. However, the reforms will take time to implement and Afghanistan will remain dependent on international donor support over the next several years.

Illicit drugs: world's largest producer of opium; poppy cultivation increased 7 percent, to a record 211,000 hectares in 2014 from 198,000 hectares in 2013, while eradication dropped sharply; relatively low opium yields due to poor weather kept potential opium production 6,300 metric tons below the record set in 2007; the Taliban and other antigovernment groups participate in and profit from the opiate trade, which is a key source of revenue for the Taliban inside Afghanistan; widespread corruption and instability impede counterdrug efforts; most of the heroin consumed in Europe and Eurasia is derived from Afghan opium; Afghanistan is also struggling to respond to a burgeoning domestic opiate addiction problem; vulnerable to drug money laundering through informal

financial networks; illicit cultivation of cannabis and regional source of hashish

Background: By terms of the 1960 Treaty of Establishment that created the independent Republic of Cyprus, the UK retained full sovereignty and jurisdiction over two areas of almost 254 square kilometers, Akrotiri and Dhekelia. The southernmost and smallest of these is the Akrotiri Sovereign Base Area, which is also referred to as the Western Sovereign Base Area.

Background: Albania declared its independence from the Ottoman Empire in 1912, but was conquered by Italy in 1939 and occupied by Germany in 1943. Communist partisans took over the country in 1944. Albania allied itself first with the USSR (until 1960), and then with China (to 1978). In the early 1990s, Albania ended 46 years of xenophobic communist rule and established a multiparty democracy. The transition has proven challenging as successive governments have tried to deal with high unemployment, widespread corruption, dilapidated infrastructure, powerful organized crime networks, and combative political opponents. Albania has made progress in its democratic development since first holding multiparty elections in 1991, but deficiencies remain. International observers judged elections to be largely free and fair since their restoration of political stability following the collapse of pyramid schemes in 1997; however, most of Albania's post-communist elections have been marred by claims of electoral fraud. Albania joined NATO in April 2009 and in June 2014 became a candidate for EU accession.

Although Albania's economy continues to grow, it has slowed, and the country is still one of the poorest in Europe. A large informal economy and an inadequate energy and transportation infrastructure remain obstacles.

Flag description: red with a black twoheaded eagle in the center; the design is claimed to be that of 15thcentury heroGeorge Kastrioti SKANDERBEG, who led a successful uprising against the Ottoman Turks that resulted in a shortlived independence for some Albanian regions (144378); an unsubstantiated explanation for the eagle symbol is the tradition that Albanians see themselves as descendants of the eagle; they refer to themselves as “Shqiptare, ” which translates as “sons of the eagle”

National symbol(s): doubleheaded eagle; national colors: red, black

National anthem: name: “Hymni i Flamurit” (Hymn to the Flag)

lyrics/music: Aleksander Stavre DRENOVA/Ciprian PORUMBESCU

note: adopted 1912

Economy overview: Albania, a formerly closed, centrallyplanned state, is a developing country with a modern openmarketeconomy. Albania managed to weather the first waves of the global financial crisis but, more recently, thenegative effects of the crisis have caused a significant economic slowdown. Close trade, remittance, and banking sector ties with Greece and Italy make

Albania vulnerable to spillover effects of debt crises and weak growth in the euro zone. Remittances, a significant catalyst for economic growth, declined from 12.15% of GDP before the 2008 financial crisis to 5.7% of GDP in 2014, mostly from Albanians residing in Greece and Italy. The agricultural sector, which accounts for almost half of employment but only about one-fifth of GDP, is limited primarily to small family operations and subsistence farming, because of a lack of modern equipment, unclear property rights, and the prevalence of small, inefficient plots of land. Complex tax codes and licensing requirements, a weak judicial system, endemic corruption, poor enforcement of contracts and property issues, and antiquated infrastructure contribute to Albania's poor business environment, making attracting foreign investment difficult. Albania's electricity supply is uneven despite upgraded transmission capacities with neighboring countries. Technical and nontechnical losses in electricity including theft and nonpayment continue to undermine the financial viability of the entire system, although the government has taken steps to stem nontechnical losses and has begun to upgrade the distribution grid. Also, with help from international donors, the government is taking steps to improve the poor national road and rail network, a long standing barrier to sustained economic growth. Inward FDI has increased significantly in recent years as the government has embarked on an ambitious program to improve the business climate through fiscal and legislative reforms. The government is focused on the simplification of licensing requirements and tax codes, and it entered into a new arrangement with the IMF for additional financial and technical support. Albania's IMF program may be at risk, however, because the government has not collected sufficient tax revenue needed to reduce the budget deficit. The country continues to face increasing public debt, exceeding its former statutory limit of 60% of GDP in 2013 and reaching 73% in 2015.

Background: After more than a century of rule by France, Algerians fought through much of the 1950s to achieve independence in 1962. Algeria's primary political party, the National Liberation Front (FLN), was established in 1954 as part of the struggle for independence and has since largely dominated politics. The Government of Algeria in 1988 instituted a multiparty system in response to public unrest, but the surprising first round success of the Islamic Salvation Front (FIS) in the December 1991 balloting led the Algerian army to intervene and postpone the second round of elections to prevent what the secular elite feared would be an extremist-led government from assuming power. The army began a crackdown on the FIS that spurred FIS supporters to begin attacking government targets. Fighting escalated into an insurgency, which saw intense violence from 1992-1998, resulting in over 100,000 deaths many attributed to indiscriminate massacres of villagers by extremists. The government gained the upper hand by the late 1990s, and FIS's armed wing, the Islamic Salvation Army, disbanded in January 2000.

Abdelaziz BOUTEFLIKA, with the backing of the military, won the presidency in 1999 in an election widely viewed as fraudulent and won subsequent elections in 2004, 2009, and 2014. The government in 2011 introduced some political reforms in response to the Arab Spring, including lifting the 19-year-old state of emergency restrictions and increasing women's quotas for elected assemblies, while also increasing subsidies to the populace. Algeria's reliance on hydrocarbon revenues to finance the government and large subsidies for the population is under stress because of declining oil prices.

Economy—overview: Algeria’s economy remains dominated by the state, a legacy of the country’s socialist post independence

development model. In recent years the Algerian Government has halted the privatization of state-owned industries and imposed restrictions on imports and foreign involvement in its economy. Hydrocarbons have long been the backbone of the economy, accounting for roughly 60% of budget revenues, 30% of GDP, and over 95% of export earnings. Algeria has the 10th largest reserves of natural gas in the world and is the sixth largest gas exporter. It ranks 16th in oil reserves. Hydrocarbon exports have enabled Algeria to maintain macroeconomic stability and amass large foreign currency reserves and a large budget stabilization fund available for tapping. In addition, Algeria's external debt is extremely low at about 2% of GDP. However, Algeria has struggled to develop non hydrocarbon industries because of heavy regulation and an emphasis on state-driven growth. The government's efforts have done little to reduce high youth unemployment rates or to address housing shortages. A wave of economic protests in February and March 2011 prompted the Algerian Government to offer more than \$23 billion in public grants and retroactive salary and benefit increases, moves which continue to weigh on public finances. Since late 2014, declining oil prices forced the government to spend down its reserves at a high rate in order to sustain social spending on salaries and subsidies, particularly since the government has been unable to boost exports of hydrocarbons or significantly grow its non-oil sector. In 2015, the Algerian Government imposed further restrictions on imports in an effort to reduce withdrawals from its foreign exchange reserves. The Government also increased the value-added tax on electricity and fuel, but said it would address subsidies at a later date. Long-term economic challenges include diversifying the economy away from its reliance on hydrocarbon exports, bolstering the private sector, attracting foreign investment, and providing adequate jobs for younger Algerians.

Telephone system: *general assessment:* privatization of Algeria's telecommunications sector began in 2000; three mobile cellular licenses have been issued and, in 2005, a consortium led by Egypt's Orascom Telecom won a 15 year license to build and operate a fixedline network in Algeria; the license will allow Orascom to develop highspeed data and other specialized services and contribute to meeting the large unfulfilled demand for basic residential telephony; Internet broadband services began in 2003

domestic: a limited network of fixed lines with a teledensity of less than 10 telephones per 100 persons has been offset by the rapid increase in mobile cellular subscribership; in 2011, mobile cellular teledensity was roughly 100 telephones per 100 persons

international: country code -213; landing point for the SEAMEWE4 fiberoptic submarine cable system that provides links to Europe, the Middle East, and Asia; microwave radio relay to Italy, France, Spain, Morocco, and Tunisia; coaxial cable to Morocco and Tunisia; participant in Medarabtel; satellite earth stations -51 (Intelsat, Intersputnik, and Arabsat) (2011)

Broadcast media: state-run Radio Television Algerienne operates the broadcast media and carries programming in Arabic, Berber dialects, and French; use of satellite dishes is widespread, providing easy access to European and Arab satellite stations; state-run radio operates several national networks and roughly 40 regional radiostations (2007)

Radio broadcast stations: AM 25, FM 1, shortwave 8 (1999)

Disputes international: Algeria and many other states reject Moroccan administration of Western Sahara; the Polisario Front, exiled in Algeria, represents the Sahrawi Arab Democratic Republic; Algeria's border with Morocco remains an irritant to bilateral relations, each nation accusing the other of harboring militants and arms smuggling; dormant disputes include Libyan claims of about 32,000 sq km still reflected on its maps of southeastern Algeria and the National Liberation Front's (FLN) assertions of a claim to Chirac Pastures in southeastern Morocco

Refugees and internally displaced persons: *refugees (country of origin):* 90,000 (Western Saharan Sahrawi, mostly living in Algerian-sponsored camps in the southwestern Algerian town of Tindouf) (2014)

IDPs: undetermined (civil war during 1990s) (2013)

Trafficking in persons: *current situation:* Algeria is a transit and, to a lesser extent, a destination and source country for women subjected to forced labor and sex trafficking and, to a lesser extent, men subjected to forced labor; criminal networks, sometimes extending to sub-Saharan Africa and to Europe, are involved in humansmuggling and trafficking in Algeria; sub-Saharan adults enter Algeria voluntarily but illegally, often with the aid of smugglers, for onward travel to Europe, but some of the women are forced into prostitution, domestic service, and begging; some sub-Saharan men, mostly from Mali, are forced into domestic servitude; some Algerian women and children are also forced into prostitution domestically

tier rating: Tier 3—Algeria does not fully comply with the minimum standards for the elimination of trafficking and is not making

significant efforts to do so: some officials denied the existence of human trafficking, hindering law enforcement efforts; the government reported its first conviction under its antitrafficking law; one potential trafficking case was investigated in 2014, but no suspected offenders were arrested; no progress was made in identifying victims among vulnerable groups or referring them to NGO run protection service, which left trafficking victims subject to arrest and detention; no anti-trafficking public awareness or educational campaigns were conducted (2015)

Background: Settled as early as 1000 B.C., Samoa was not reached by European explorers until the 18th century. International rivalries in the latter half of the 19th century were settled by an 1899

treaty in which Germany and the US divided the Samoan archipelago. The US formally occupied its portion a smaller group of eastern islands with the excellent harbor of Pago Pago—the following year.

Economy overview: American Samoa has a traditional Polynesian economy in which more than 90% of the land is communally owned. Economic activity is strongly linked to the US with which American Samoa conducts most of its commerce. Tuna fishing and tuna processing plants are the backbone of the private sector with canned tuna the primary export. The two tuna canneries accounted for 13.1% of employment in 2013. In late September 2009, an earthquake and the resulting tsunami devastated American Samoa and nearby Samoa, disrupting transportation and power generation, and resulting in about 200 deaths. The US Federal Emergency Management Agency oversaw a relief program of nearly \$25 million. Transfers from the US Government add substantially to American Samoa's economic well-being. Attempts by the government to develop a larger and broader economy are restrained by Samoa's remote location, its limited transportation, and its devastating hurricanes. Tourism is a promising developing sector. In 2015, a new fish processing company completed refurbishing the processing facilities left behind by one of the two canneries that closed in 2009 and opened a new cannery. With two operating canneries once again, fish processing and exports will rise in the coming years.

Background: The landlocked Principality of Andorra is one of the smallest states in Europe, nestled high in the Pyrenees between the French and Spanish borders. For 715 years, from 1278 to 1993, Andorrans lived under a unique co-principality, ruled by French and Spanish leaders (from 1607 onward, the French chief of state and the Bishop of Urgell). In 1993, this feudal system was modified with the introduction of a modern, constitution; the co-princes remained as titular heads of state, but the government transformed into a parliamentary democracy. Andorra has become a popular tourist destination visited by approximately 10 million people each year

drawn by the winter sports, summer climate, and duty-free shopping. Andorra has also become a wealthy international commercial center because of its mature banking sector and low taxes. As part of its effort to modernize its economy, Andorra has opened to foreign investment, and engaged in other reforms, such as advancing tax initiatives aimed at supporting a broader infrastructure. Although not a member of the EU, Andorra enjoys a special relationship with the organization and uses the euro as its national currency.

Economy—overview: Tourism, retail sales, and finance are the mainstays of Andorra's tiny, well-to-do economy, accounting for more than three-quarters of GDP. Andorra's duty-free status for some products and its summer and winter resorts attract millions of visitors annually, although the economic downturn in neighboring countries has curtailed the number of tourists. Agricultural production is limited—only about 5% of the land is arable—and most food has to be imported, making the economy vulnerable to changes in fuel and food prices. The principal livestock is sheep. Manufacturing output and exports consist mainly of perfumes and cosmetic products, products of the printing industry, electrical machinery and equipment, clothing, tobacco products, and furniture. Andorra is a member of the EU Customs Union and is treated as an EU member for trade in manufactured goods (no tariffs) and as a non-EU member for agricultural products. Andorra uses the euro and is effectively subject

to the monetary policy of the European Central Bank. Andorra's comparative advantage as a tax haven eroded when the borders of neighboring France and Spain opened; its bank secrecy laws have been relaxed under pressure from the EU and OECD. Slower growth in Spain and France has dimmed Andorra's economic prospects. Since 2010, a drop in tourism contributed to a contraction in GDP and a sharp deterioration of public finances, prompting the government to begin implementing several austerity measures to reduce the budget deficit, including levying a special corporate tax. The Government is also planning to institute an income tax at the behest of the Organization for Economic Cooperation and Development. The new tax will apply to anyone who lives in the principality for at least 183 days in a calendar year. The first \$30,000 of income will be tax free, with the next \$20,000 taxed at 5%. The balance of income exceeding the initial \$50,000 will be taxed at 10%, which is still less than in most West European countries. Andorra's Government also relaxed its residency and investment laws in 2012 to make the country more attractive to foreign investors. A person now must spend 90 days a year in the principality to qualify for residency, compared with the previous 180-day requirement. Foreigners now have the same property ownership rights as citizens. In addition, three new categories of residency permits were introduced. Anyone who is retired or at least not working in Andorra can obtain a permit in the first category by making a financial investment in the country of at least €400,000, which can include a property purchase.

Background: Angola is still rebuilding its country since the end of a 27year civil war in 2002. Fighting between the Popular Movement for the Liberation of Angola (MPLA), led by Jose Eduardo DOS SANTOS, and the National Union for the Total Independence of Angola (UNITA), led by Jonas SAVIMBI, followed independence from

Portugal in 1975. Peace seemed imminent in 1992 when Angola held national elections, but fighting picked up again in 1993. Up to 1.5 million lives may have been lost and 4 million people displaced—during the more than a quarter century of fighting. SAVIMBI's death in 2002 ended UNITA's insurgency and cemented the MPLA's hold on power. President DOS SANTOS pushed through a new constitution in 2010 and elections held in 2012 saw him installed as president. Angola assumed a nonpermanent seat on the UN Security Council for the 2015–16 term.

Economy overview: Angola’s economy is overwhelmingly

driven by its oil sector. Oil production and its supporting activities contribute about 50% of GDP, more than 70% of government revenue, and more than 90% of the country's exports. Diamonds contribute an additional 5% to exports. Subsistence agriculture provides the main livelihood for most of the people, but half of the country's food is still imported. Increased oil production supported growth averaging more than 17% per year from 2004 to 2008. A postwar reconstruction boom and resettlement of displaced persons has led to high rates of growth in construction and agriculture as well. Some of the country's infrastructure is still damaged or undeveloped from the 27-year-long civil war. However, the government since 2005 has used billions of dollars in credit lines from China, Brazil, Portugal, Germany, Spain, and the EU to help rebuild Angola's public infrastructure. Land mines left from the war still mar the countryside, and as a result, the national military, international partners, and private Angolan firms all continue to remove them. The global recession that started in 2008 stalled economic growth. In particular, lower prices for oil and diamonds during the global recession slowed GDP growth to 2.4% in 2009, and many construction projects stopped because Luanda accrued \$9 billion in arrears to foreign construction companies when government revenue fell in 2008 and 2009. Angola formally abandoned its currency peg in 2009, and in November 2009 signed onto an IMF Stand-By Arrangement loan of \$1.4 billion to rebuild international reserves. Consumer inflation declined from 325% in 2000 to less than 9% in 2014. Falling oil prices and slower than expected growth in non-oil GDP have reduced growth prospects for 2015. Angola has responded by reducing government subsidies and by proposing import quotas and a more restrictive licensing regime. Corruption, especially in the extractive sectors, is a major long-term challenge.

Background: Colonized by English settlers from Saint Kitts in 1650, Anguilla was administered by Great Britain until the early 19th century, when the island—against the wishes of the inhabitants—was incorporated into a single British dependency along with Saint Kitts and Nevis. Several attempts at separation failed. In 1971, two years after a revolt, Anguilla was finally allowed to secede; this arrangement was formally recognized in 1980, with Anguilla becoming a separate British dependency.

Flag description: blue, with the flag of the UK in the upper hoist-side quadrant and the Anguillan coat of arms centered in the outer half of the flag; the coat of arms depicts three orange dolphins in an interlocking circular design on a white background with a turquoise-blue field below; the white in the background represents peace; the blue base symbolizes the surrounding sea, as well as faith, youth, and hope; the three dolphins stand for endurance, unity, and strength

National symbol(s): dolphin

National anthem: *name:* "God Bless Anguilla"

lyrics/music: Alex RICHARDSON

note: local anthem adopted 1981; as a territory of the United Kingdom, “God Save the Queen” is official (see United Kingdom)

Economy overview: Anguilla has few natural resources, and the economy depends heavily on luxury tourism, offshore banking, lobster fishing, and remittances from emigrants. Increased activity in the tourism industry has spurred the growth of the construction sector contributing to economic growth. Anguillan officials have put substantial effort into developing the offshore financial sector, which is small but growing. In the medium term, prospects for the economy will depend largely on the tourism sector and, therefore, on revived income growth in the industrialized nations as well as on favorable weather conditions.

Illicit drugs: transshipment point for South American narcotics destined for the US and Europe

Background: Speculation over the existence of a “southern land” was not confirmed until the early 1820s when British and American commercial operators and British and Russian national expeditions began exploring the Antarctic Peninsula region and other areas south of the Antarctic Circle. Not until 1840 was it established that Antarctica was indeed a continent and not merely a group of islands or an area of ocean. Several exploration “firsts” were achieved in the early 20th century, but generally the area saw little human activity. Following World War II, however, the continent experienced an upsurge in scientific research. A number of countries have set up a range of year-round and seasonal stations, camps, and refuges to support scientific research in Antarctica. Seven have made territorial claims, but not all countries recognize these claims. In order to form a legal framework for the activities of nations on the continent, an Antarctic Treaty was negotiated that neither denies nor gives recognition to existing territorial claims; signed in 1959, it entered into force in 1961.

Location: continent mostly south of the Antarctic Circle

Geographic coordinates: 90 00 S, 0 00 E

Map references: Antarctic Region

Area: *total:* 14 million sq km

land: 14 million sq km (280,000 sq km ice-free, 13.72 million sq km ice-covered) (est.)

note: fifth-largest continent, following Asia, Africa, North America, and South America, but larger than Australia and the subcontinent of Europe

Area—comparative: slightly less than 1.5 times the size of the US

Land boundaries: 0 km

note: see entry on Disputes international

Coastline: 17,968 km

Maritime claims: Australia, Chile, and Argentina claim Exclusive Economic Zone (EEZ) rights or similar over 200 nm extensions seaward from their continental claims, but like the claims themselves, these zones are not Accepted by other countries; 22 of 29 Antarctic consultative nations have made no claims to Antarctic territory (although Russia and the US have reserved the right to do so) and do not recognize the claims of the other nations; also see the Disputes—international entry

Climate: severe low temperatures vary with latitude, elevation, and distance from the ocean; East Antarctica is colder than West Antarctica because of its higher elevation; Antarctic Peninsula has the most moderate climate; higher temperatures occur in January along the coast and average slightly below freezing

Terrain: about 98% thick continental ice sheet and 2% barren rock, with average elevations between 2,000 and 4,000 m; mountain ranges up to nearly 5,000 m; ice-free coastal areas include parts of southern Victoria Land, Wilkes Land, the Antarctic Peninsula area, and parts of Ross Island on McMurdo Sound; glaciers form ice shelves along about half of the coastline, and floating ice shelves constitute 11% of the area of the continent

Elevation: *mean elevation:* 2,300 m

elevation extremes: *lowest point:* Bentley Subglacial Trench -2,540 m

highest point: Vinson Massif 4,897 m

note: the lowest known land point in Antarctica is hidden in the Bentley Subglacial Trench; at its surface is the deepest ice yet discovered and the world's lowest elevation not under seawater

Natural resources: iron ore, chromium, copper, gold, nickel, platinum and other minerals, and coal and hydrocarbons have been found in small noncommercial quantities; none presently exploited; krill, finfish, and crab have been taken by commercial fisheries

Land use: *agricultural land:* 0%

forest: 0%

other: 100% (ice 98%, barren rock 2%) (2015 est.)

Natural hazards: katabatic (gravity-driven) winds blow coastward from the high interior; frequent blizzards form near the foot of the plateau; cyclonic storms form over the ocean and move clockwise along the coast; volcanism on Deception Island and isolated areas of West Antarctica; other seismic activity rare and weak; large icebergs may calve from ice shelf

Environment—current issues: the discovery of a large Antarctic ozone hole in the earth's stratosphere (the ozone layer)—first announced in 1985—spurred the signing of the Montreal Protocol in 1987, an international agreement phasing out the use of ozone-depleting chemicals; the ozone layer prevents most harmful wavelengths of ultra-violet (UV) light from passing through the earth's atmosphere; ozone depletion has been shown to harm a variety of Antarctic marine plants and animals (plankton); in 2002, significant areas of ice shelves disintegrated in response to regional warming; in 2016, a very gradual trend toward “healing” of the ozone hole was reported

Geography—note: the coldest, windiest, highest (on average), and driest continent; during summer, more solar radiation reaches the surface at the South Pole than is received at the Equator in an equivalent period; mostly uninhabitable, 98% of the land area is covered by the Antarctic ice sheet, the largest single mass of ice on earth

Population: no indigenous inhabitants, but there are both permanent and summer-only staffed research stations

note: 53 countries have signed the 1959 Antarctic Treaty; 30 of those operate through their National Antarctic Program a number of seasonal-only (summer) and year-round research stations on the

continent and its nearby islands south of 60 degrees south latitude (the region covered by the Antarctic Treaty); the population engaging in and supporting science or managing and protecting the Antarctic region varies from approximately 4,400 in summer to 1,100 in winter; in addition, approximately 1,000 personnel, including ship's crew and scientists doing onboard research, are present in the waters of the treaty region peak summer (December-February) population—4,490 total; Argentina 667, Australia 200, Australia and Romania jointly 13, Belgium 20, Brazil 40, Bulgaria 18, Chile 359, China 90, Czech Republic 20, Ecuador 26, Finland 20, France 125, France and Italy jointly 60, Germany 90, India 65, Italy 102, Japan 125, South Korea 70, NZ 85, Norway 44, Peru 28, Poland 40, Russia 429, South Africa 80, Spain 50, Sweden 20, Ukraine 24, UK 217, US 1,293, Uruguay 70 (2008–09) winter (June-August) station population—1,106 total; Argentina 176, Australia 62, Brazil 12, Chile 114, China 29, France 26, France and Italy jointly 13, Germany 9, India 25, Japan 40, South Korea 18, NZ 10, Norway 7, Poland 12, Russia 148, South Africa 10, Ukraine 12, UK 37, US 337, Uruguay 9 (2009); research stations operated within the Antarctic Treaty area (south of 60 degrees south latitude) by National Antarctic Programs year-round stations—approximately 40 total; Argentina 6, Australia 3, Brazil 1, Chile 6, China 2, France 1, France and Italy jointly 1, Germany 1, India 1, Japan 1, South Korea 1, NZ 1, Norway 1, Poland 1, Russia 5, South Africa 1, Ukraine 1, UK 2, US 3, Uruguay 1 (2009) a range of seasonal-only (summer) stations, camps, and refuges—Argentina, Australia, Belarus, Belgium, Bulgaria, Brazil, Chile, China, Czech Republic, Ecuador, Finland, France, Germany, India, Italy, Japan, South Korea, New Zealand, Norway, Peru, Poland, Russia, South Africa, Spain, Sweden, Ukraine, UK, US, and Uruguay (2008–09) in addition, during the austral summer some nations have numerous occupied locations such as tent camps, summer-long temporary facilities, and mobile traverses in support of research (May 2009 est.)

Country name: *conventional long form:* none

conventional short form: Antarctica

etymology: name derived from two Greek words meaning “opposite to the Arctic” or “opposite to thenorth”

Government type: Antarctic Treaty Summary—the Antarctic region is governed by a system known as the Antarctic Treaty System; the system includes: 1. the Antarctic Treaty, signed on 1 December 1959 and entered into force on 23 June 1961, which establishes the legal framework for the management of Antarctica, 2.

Recommendations and Measures adopted at meetings of Antarctic Treaty countries, 3. The Convention for the Conservation of Antarctic Seals (1972), 4. The Convention for the Conservation of Antarctic Marine Living Resources (1980), and 5. The Protocol on Environmental Protection to the Antarctic Treaty (1991); the 38th Antarctic Treaty Consultative Meeting was held in Sofia, Bulgaria in May 2015; at these annual meetings, decisions are made by consensus (not by vote) of all consultative member nations; by January 2016, there were 53 treaty member nations: 29 consultative and 24 non-consultative; consultative (decision-making) members include the seven nations that claim portions of Antarctica as national territory (some claims overlap) and 21 non-claimant nations; the US and Russia have reserved the right to make claims; the US does not recognize the claims of others; Antarctica is administered through meetings of the consultative member nations; decisions from these meetings are carried out by these member nations (with respect to their own nationals and operations) in accordance with their own national laws; the years in parentheses indicate when a consultative member-nation acceded to the Treaty and when it was accepted as a consultative member, while no date indicates the country was an original 1959 treaty signatory; claimant nations are—Argentina, Australia, Chile, France, NZ, Norway, and the UK; nonclaimant consultative nations are—Belgium, Brazil (1975/1983), Bulgaria (1978/1998), China (1983/1985), Czech Republic (1962/2017), Ecuador (1987/1990), Finland (1984/1989), Germany (1979/1981), India (1983/1983), Italy (1981/1987), Japan, South Korea (1986/1989), Netherlands (1967/1990), Peru (1981/1989), Poland (1961/1977), Russia, South Africa, Spain (1982/1988), Sweden (1984/1988), Ukraine (1992/2004), Uruguay (1980/1985), and the US; non-consultative members, with year of accession in parentheses, are—Austria (1987), Belarus (2006), Canada (1988), Colombia (1989), Cuba (1984), Denmark (1965), Estonia (2001), Greece (1987), Guatemala (1991), Hungary (1984), Iceland (2015), Kazakhstan (2015), North Korea (1987), Malaysia (2011), Monaco (2008), Mongolia (2015), Pakistan (2012), Papua New Guinea (1981), Portugal (2010), Romania (1971), Slovakia (1962/1993), Switzerland (1990), Turkey (1996), and Venezuela (1999); note—Czechoslovakia acceded to the Treaty in 1962 and separated into the Czech Republic and Slovakia in 1993; Article 1—area to be used for peaceful purposes only; military activity, such as weapons testing, is prohibited, but military personnel and equipment may be used for scientific research or any other peaceful purpose; Article 2—freedom of scientific investigation and cooperation shall continue; Article 3—free exchange of information and personnel, cooperation with the UN and other international

agencies; Article 4—does not recognize, dispute, or establish territorial claims and no new claims shall be asserted while the treaty is in force; Article 5—prohibits nuclear explosions or disposal of radioactive wastes; Article 6—includes under the treaty all land and ice shelves south of 60 degrees 00 minutes south and reserves highseas rights; Article 7—treaty-state observers have free access, including aerial observation, to any area and may inspect all stations, installations, and equipment; advance notice of all expeditions and of the introduction of military personnel must be given; Article 8—allows for jurisdiction over observers and scientists by their own states; Article 9—frequent consultative meetings take place among member nations; Article 10—treaty states will discourage activities by any country in Antarctica that are contrary to the treaty; Article 11—disputes to be settled peacefully by the parties concerned or, ultimately, by the ICJ; Articles 12, 13, 14—deal with upholding, interpreting, and amending the treaty among involved nations; other agreements—some 200 recommendations adopted at treaty consultative meetings and ratified by governments; a mineral resources agreement was signed in 1988 but remains unratified; the Protocol on Environmental Protection to the Antarctic Treaty was signed 4 October 1991 and entered into force 14 January 1998; this agreement provides for the protection of the Antarctic environment through six specific annexes: 1) environmental impact assessment, 2) conservation of Antarctic fauna and flora, 3) waste disposal and waste management, 4) prevention of marine pollution, 5) area protection and management and 6) liability arising from environmental emergencies; it prohibits all activities relating to mineral resources except scientific research; a permanent Antarctic Treaty Secretariat was established in 2004 in Buenos Aires, Argentina

Legal system: Antarctica is administered through annual meetings—known as Antarctic Treaty Consultative Meetings—which include consultative member nations, non-consultative member nations, observer organizations, and expert organizations; decisions from these meetings are carried out by these member nations (with respect to their own nationals and operations) in accordance with their own national laws; more generally, access to the Antarctic Treaty area, that is to all areas between 60 and 90 degrees south latitude, is subject to a number of relevant legal instruments and authorization procedures adopted by the states party to the Antarctic Treaty; note—US law, including certain criminal offenses by or against US nationals, such as murder, may apply extraterritorially; some US laws directly apply to Antarctica; for example, the Antarctic Conservation Act, 16 U.S.C. section 2401 et seq., provides civil and criminal penalties for the following activities unless authorized by regulation of statute: the

taking of native mammals or birds; the introduction of nonindigenous plants and animals; entry into specially protected areas; the discharge or disposal of pollutants; and the importation into the US of certain items from Antarctica; violation of the Antarctic Conservation Act carries penalties of up to \$10,000 in fines and one year in prison; the National Science Foundation and Department of Justice share enforcement responsibilities; Public Law 95–541, the US Antarctic Conservation Act of 1978, as amended in 1996, requires expeditions from the US to Antarctica to notify, in advance, the Office of Oceans, Room 5805, Department of State, Washington, DC 20520, which reports such plans to other nations as required by the Antarctic Treaty; for more information, contact Permit Office, Office of Polar Programs, National Science Foundation, Arlington, Virginia 22230; *telephone*: (703) 292-8030, or visit its website at www.nsf.gov

Economy overview: Scientific undertakings rather than commercial pursuits are the predominant human activity in Antarctica. Offshore fishing and tourism, both based abroad, account for Antarctica's limited economic activity. Antarctic fisheries, targeting three main species—Patagonian and Antarctic toothfish (*Dissostichus eleginoides* and *D. mawsoni*), mackerel icefish (*Champsocephalus gunnari*), and krill (*Euphausia superba*)—reported landing 295,000 metric tons in 2013–14 (estimated fishing is from the area covered by the Convention on the Conservation of Antarctic Marine Living Resources (CCAMLR), which extends slightly beyond the Antarctic Treaty area). Unregulated fishing, particularly of Patagonian toothfish (also known as Chilean sea bass), is an ongoing problem. The CCAMLR determines the recommended catch limits for marine species. A total of 36,702 tourists visited the Antarctic Treaty area in the 2014–15 Antarctic summer, slightly lower than the 37,405 visitors in 2013–14. These estimates were provided to the Antarctic Treaty by the International Association of Antarctica Tour Operators (IAATO) and do not include passengers on overflights. Nearly all of them were passengers on commercial (nongovernmental) ships and several yachts that make trips during the summer.

Ports and terminals: McMurdo Station; most coastal stations have sparse and intermittent offshore anchorages; a few stations have basic wharf facilities

Transportation—note: US coastal stations include McMurdo (77 51 S, 166 40 E) and Palmer (64 43 S, 64 03 W); government use only except by permit (see Permit Office under “Legal System”); all ships at port are subject to inspection in accordance with Article 7, Antarctic Treaty; relevant legal instruments and authorization procedures adopted by the states parties to the Antarctic Treaty regulating access to the Antarctic Treaty area to all areas between 60 and 90 degrees of latitude south have to be complied with (see “Legal System”); The Hydrographic Commission on Antarctica (HCA), a commission of the International Hydrographic Organization (IHO), is responsible for hydrographic surveying and nautical charting matters

in Antarctic Treaty area; it coordinates and facilitates provision of accurate and appropriate charts and other aids to navigation in support of safety of navigation in region; membership of HCA is open to any IHO Member State whose government has acceded to the Antarctic Treaty and which contributes resources or data to IHO Chart coverage of the area

Military—note: the Antarctic Treaty prohibits any measures of a military nature, such as the establishment of military bases and fortifications, the carrying out of military maneuvers, or the testing of any type of weapon; it permits the use of military personnel or equipment for scientific research or for any other peaceful purposes

Disputes international: the Antarctic Treaty freezes, and most states do not recognize, the land and maritime territorial claims made by Argentina, Australia, Chile, France, New Zealand, Norway, and the UK (some overlapping) for three-fourths of the continent; the US and Russia reserve the right to make claims; no formal claims have been made in the sector between 90 degrees west and 150 degrees west; the International Whaling Commission created a sanctuary around the entire continent to deter catches by countries claiming to conduct scientific whaling; Australia has established a similar preserve in the waters around its territorial claim

Background: The Siboney were the first people to inhabit the islands of Antigua and Barbuda in 2400 B.C., but Arawak Indians populated the islands when COLUMBUS landed on his second voyage in 1493. Early Spanish and French settlements were succeeded by an English colony in 1667. Slavery, established to run the sugar plantations on Antigua, was abolished in 1834. The islands became an independent state within the British Commonwealth of Nations in 1981.

Diplomatic representation from the US: the US does not have an embassy in Antigua and Barbuda; the US Ambassador to Barbados is accredited to Antigua and Barbuda

Flag description: red, with an inverted isosceles triangle based on the top edge of the flag; the triangle contains three horizontal bands of black (top), light blue, and white, with a yellow rising sun in the black band; the sun symbolizes the dawn of a new era, black represents the African heritage of most of the population, blue is for hope, and red is for the dynamism of the people; the “V” stands for victory; the successive yellow, blue, and white coloring is also meant to evoke the country’s tourist attractions of sun, sea, and sand

National symbol(s): fallow deer; national colors: red, white, blue, black, yellow

National anthem: *name:* “Fair Antigua, We Salute Thee”

lyrics/music: Novelle Hamilton RICHARDS/Walter Garnet Picart CHAMBERS

note: adopted 1967; as a Commonwealth country, in addition to the national anthem, “God Save the Queen” serves as the royal anthem (see United Kingdom)

Economy overview: Tourism continues to dominate Antigua and Barbuda’s economy, accounting for nearly 60% of GDP and 40% of investment. The dual-island nation’s agricultural production is focused on the domestic market and constrained by a limited water supply and a labor shortage stemming from the lure of higher wages in tourism and construction. Manufacturing comprises enclave-type assembly for export with major products being bedding, handicrafts, and electronic components. After taking office in 2004, the SPENCER government adopted an ambitious fiscal reform program and was successful in reducing its public debt-to-GDP ratio from approximately 130% in 2010 to 89% in 2012. In 2009, the country’s economy was severely hit by the global economic crisis and suffered from the

collapse of its largest private sector employer, a steep decline in tourism, a rise in debt, and a sharp economic contraction between 2009 and 2011. The country has not yet returned to its pre-crisis growth levels. Prospects for economic growth in the medium term will continue to depend on tourist arrivals from the US, Canada, and Europe and potential damages from natural disasters.

Trafficking in persons: *current situation:* Antigua and Barbuda is a destination and transit country for adults and children subjected to sex trafficking and forced labor; forced prostitution has been reported in bars, taverns, and brothels, while forced labor occurs in domestic service and the retail sector

tier rating: Tier 2 Watch List—Antigua and Barbuda does not fully comply with the minimum standards for the elimination of trafficking; however, it is making significant efforts to do so; the government made no discernible progress in convicting traffickers in 2014 but charged two individuals in separate cases; efforts to convict traffickers have been impeded by a 2014 ruling that found the 2010 anti-trafficking act was unconstitutional because jurisdiction rests with the Magistrate's Court rather than the High Court; no new prosecutions, convictions, or punishments were recorded in 2014; credible sources have raised concerns about trafficking-related complicity among some off-duty police officers, which could hinder investigations or victims willingness to report offenses; prevention efforts were sustained, but progress in protecting victims was uneven; seven victims were assisted, which was an increase over 2013 (2015)

Illicit drugs: considered a minor transshipment point for narcotics bound for the US and Europe; more significant as an offshore financial center

Background: The Arctic Ocean is the smallest of the world's five oceans (after the Pacific Ocean, Atlantic Ocean, Indian Ocean, and the Southern Ocean). The Northwest Passage (US and Canada) and Northern Sea Route (Norway and Russia) are two important seasonal waterways. In recent years the polar ice pack has receded in the summer allowing for increased navigation and raising the possibility of future sovereignty and shipping disputes among the six countries bordering the Arctic Ocean (Canada, Denmark (Greenland), Iceland, Norway, Russia, US).

Location: body of water between Europe, Asia, and North America, mostly north of the Arctic Circle

Geographic coordinates: 90 00 N, 0 00 E

Map references: Arctic Region

Area: *total:* 14.056 million sq km

note: includes Baffin Bay, Barents Sea, Beaufort Sea, Chukchi Sea, East Siberian Sea, Greenland Sea, Hudson Bay, Hudson Strait, Kara Sea, Laptev Sea, Northwest Passage, and other tributary water bodies

Area—comparative: slightly less than 1.5 times the size of the US

Coastline: 45,389 km

Climate: polar climate characterized by persistent cold and relatively narrow annual temperature range; winters characterized by continuous darkness, cold and stable weather conditions, and clear skies; summers characterized by continuous daylight, damp and foggy weather, and weak cyclones with rain or snow

Terrain: central surface covered by a perennial drifting polar icepack that, on average, is about 3 m thick, although pressure ridges may be three times that thickness; clockwise drift pattern in the Beaufort Gyral Stream, but nearly straight-line movement from the New Siberian Islands (Russia) to Denmark Strait (between Greenland and Iceland); the icepack is surrounded by open seas during the summer, but more than doubles in size during the winter and extends to the encircling landmasses; the ocean floor is about 50% continental shelf (highest percentage of any ocean) with the remainder a central basin interrupted by three submarine ridges (Alpha Cordillera, Nansen Cordillera, and Lomonosov Ridge)

Elevation: *mean depth:* -1,205 m

elevation extremes: *lowest point:* Molloy Deep -5,607 m

highest point: sea level 0 m

Natural resources: sand and gravel aggregates, placer deposits, polymetallic nodules, oil and gas fields, fish, marine mammals (seals and whales)

Natural hazards: ice islands occasionally break away from northern Ellesmere Island; icebergs calved from glaciers in western Greenland and extreme northeastern Canada; permafrost in islands; virtually ice locked from October to June; ships subject to superstructure icing from October to May

Environment—current issues: endangered marine species include walruses and whales; fragile ecosystem slow to change and slow to recover from disruptions or damage; thinning polar icepack

Geography—note: major chokepoint is the southern Chukchi Sea (northern access to the Pacific Ocean via the Bering Strait); strategic location between North America and Russia; shortest marine link between the extremes of eastern and western Russia; floating research stations operated by the US and Russia; maximum snow cover in March or April about 20 to 50 centimeters over the frozen ocean; snow cover lasts about 10 months

Country name: *etymology:* the name Arctic comes from the Greek word “arktikos” meaning “near the bear” or “northern,” and that word derives from “arktos,” meaning “bear”; the name refers either to the constellation Ursa Major, the “Great Bear,” which is prominent in the northern celestial sphere, or to the constellation Ursa Minor, the “Little Bear,” which contains Polaris, the North (Pole) Star

Economy—overview: Economic activity is limited to the exploitation of natural resources, including petroleum, natural gas, fish, and seals.

Ports and terminals: *major seaport(s):* Churchill (Canada), Murmansk (Russia), Prudhoe Bay (US)

Transportation—note: sparse network of air, ocean, river, and land routes; the Northwest Passage (North America) and Northern Sea Route (Eurasia) are important seasonal waterways

Disputes—international: Canada and the US dispute how to divide the Beaufort Sea and the status of the Northwest Passage but continue to work cooperatively to survey the Arctic continental shelf; Denmark (Greenland) and Norway have made submissions to the Commission on the Limits of the Continental shelf (CLCS) and Russia is collecting additional data to augment its 2001 CLCS submission; record summer melting of sea ice in the Arctic has renewed interest in maritime shipping lanes and sea floor exploration; Norway and Russia signed a comprehensive maritime boundary agreement in 2010

Background: In 1816, the United Provinces of the Rio Plata declared their independence from Spain. After Bolivia, Paraguay, and Uruguay went their separate ways, the area that remained became Argentina. The country's population and culture were heavily shaped by immigrants from throughout Europe, with Italy and Spain providing the largest percentage of newcomers from 1860 to 1930. Up until about the mid-20th century, much of Argentina's history was dominated by periods of internal political conflict between Federalists and Unitarians and between civilian and military factions. After World War II, an era of Peronist populism and direct and indirect military interference in subsequent governments was followed by a military junta that took power in 1976. Democracy returned in 1983 after a failed bid to seize the Falkland Islands (Islas Malvinas) by force, and has persisted despite numerous challenges, the most formidable of which was a severe economic crisis in 2001–02 that led to violent public protests and the successive resignations of several presidents.

per capita: 864.9 cu m/yr (2005)

Natural hazards: San Miguel de Tucuman and Mendoza areas in the Andes subject to earthquakes; pamperos are violent windstorms that can strike the pampas and northeast; heavy flooding in some areas

volcanism: volcanic activity in the Andes Mountains along the Chilean border; Copahue (elev. 2,997 m) last erupted in 2000; other historically active volcanoes include Lullaillo, Maipo, Planchon-Peteroa, SanJose, Tromen, Tupungatito, and Viedma

Environment current issues: environmental problems (urban and rural) typical of an industrializing economy such as deforestation, soil degradation, desertification, air pollution, and water pollution

note: Argentina is a world leader in setting voluntary greenhouse gas targets

Environment international agreements: *party to:* Antarctic-Environmental Protocol, Antarctic-Marine Living Resources, Antarctic Seals, Antarctic Treaty, Biodiversity, Climate Change, Climate Change-Kyoto Protocol, Desertification, Endangered Species, Environmental Modification, Hazardous Wastes, Law of the Sea,

signed, but not ratified: Marine Life Conservation

Geography—note: second-largest country in South America (after Brazil); strategic location relative to sea lanes between the South Atlantic and the South Pacific Oceans (Strait of Magellan, Beagle Channel, Drake Passage); diverse geophysical landscapes range from tropical climates in the north to tundra in the far south; Cerro-Aconcagua is the Western Hemisphere's tallest mountain, while Laguna del Carbon is the lowest point in the Western Hemisphere

Nationality: *noun:* Argentine(s)

adjective: Argentine

Ethnic groups: white (mostly Spanish and Italian) 97%, mestizo (mixed white and Amerindian ancestry), Amerindian, or other nonwhite groups 3%

Languages: Spanish (official), Italian, English, German, French, indigenous (Mapudungun, Quechua)

Religions: nominally Roman Catholic 92% (less than 20% practicing), Protestant 2%, Jewish 2%, other 4%

Demographic profile: Argentina's population continues to grow but at a slower rate because of its steadily declining birth rate. Argentina's fertility decline began earlier than in the rest of Latin America, occurring most rapidly between the early 20th century and the 1950s and then becoming more gradual. Life expectancy has been improving, most notably among the young and the poor. While the population under age 15 is shrinking, the youth cohort—ages 15–24 is the largest in Argentina's history and will continue to bolster the working-age population. If this large working-age population is well-educated and gainfully employed, Argentina is likely to experience an economic boost and possibly higher per capita savings and investment. Although literacy and primary school enrollment are nearly universal, grade repetition is problematic and secondary school completion is low. Both of these issues vary widely by region and socioeconomic group. Argentina has been primarily a country of immigration for most of its history, welcoming European immigrants after its independence in the 19th century and attracting especially large numbers from Spain and Italy. European immigration diminished in the 1950s, when Argentina's military dictatorships tightened immigration rules and European economies rebounded.

Regional migration, however, continued to supply low-skilled workers and today it accounts for three-quarters of Argentina's immigrant population. The first waves of highly skilled Argentine emigrant workers headed mainly to the United States and Spain in the 1960s and 1970s. The ongoing European economic crisis is driving the return migration of some Argentinean and other Latin American nationals, as well as the immigration of Europeans to South America, where Argentina is a key recipient.

Economy overview: Argentina benefits from rich natural resources, a highly literate population, an export-oriented agricultural sector, and a diversified industrial base. Although one of the world's wealthiest countries 100 years ago, Argentina suffered during most of the 20th century from recurring economic crises, persistent fiscal and current account deficits, high inflation, mounting external debt, and capital flight. A severe depression, growing public and external indebtedness, and an unprecedented bank run culminated in 2001 in the most serious economic, social, and political crisis in the country's turbulent history. Interim President Adolfo RODRIGUEZ SAA declared a default-at the time the largest ever-on the government's foreign debt in December of that year, and abruptly resigned only a few days after taking office. His successor, Eduardo DUHALDE, announced an end to the peso's decade-long 1-to-1 peg to the US dollar in early 2002. The economy bottomed out that year, with real GDP 18% smaller than in 1998 and almost 60% of Argentines below the poverty line. Real GDP rebounded to grow by an average 8.5% annually over the subsequent six years, taking advantage of previously idled industrial capacity and labor, an audacious debt restructuring and reduced debt burden, excellent international financial conditions, and expansionary monetary and fiscal policies. Inflation also increased, however, during the administration of President Nestor KIRCHNER, which responded with price restraints on businesses, as well as export taxes and restraints, and beginning in 2007, with understating inflation data.

Cristina FERNANDEZ DE KIRCHNER succeeded her husband as president in late 2007, and the rapid economic growth of previous years began to slow sharply the following year as government policies held back exports and the world economy fell into recession. The economy in 2010 rebounded strongly from the 2009 recession, but has slowed since late 2011 even as the government continued to rely on expansionary fiscal and monetary policies, which have kept inflation in the double digits.

The government has taken multiple steps in recent years to deal with these problems. It expanded state intervention in the economy throughout 2012. In May 2012 the Congress approved the nationalization of the oil company YPF from Spain's Repsol. The government expanded formal and informal measures to restrict imports during the year, including a requirement for pre-registration and pre-approval of all imports. In July 2012, the government also further tightened currency controls in an effort to bolster foreign reserves and stem capital flight. In October 2013, the government settled long standing international arbitral disputes dating to before and following the 2001 Argentine financial crisis. During 2014, the government continued its expansionary fiscal and monetary policies

and foreign exchange and imports controls. Between 2011 and 2013, Central Bank foreign reserves had dropped \$21.3 billion from a high of \$52.7 billion. In July 2014, Argentina and China agreed on an \$11 billion currency swap; the Argentine Central Bank has received the equivalent of \$3.2 billion in Chinese yuan, which it counts as international reserves.

In 2014, the government also took some measures to mend ties with the international financial community, including engaging with the IMF to improve its economic data reporting, reaching a compensation agreement with Repsol for the expropriation of YPF, and agreeing to pay \$9.7 billion in arrears to the Paris Club over five years, including \$606 million owed to the US. In July 2014, Argentina made its first payment to Paris Club creditors. At the same time, the Argentine Government in July 2014 entered a technical default on its external debt after it failed to reach an agreement with holdout creditors in the US. The FERNANDEZ DE KIRCHNER government rejected repeated attempts by the court to encourage a negotiated solution with holdouts. Throughout much of 2015, negotiations to repay holdout creditors stalled. The government's delay in reaching a settlement and the continuation of interventionist policies contributed to high inflation and a prolonged recession.

After being elected into office on December 10, President MACRI has taken significant steps to liberalize the Argentine economy. His administration lifted capital controls; floated the peso, negotiated debt payments with holdout bond creditors, and removed export controls on some commodities.

Military—note: the Argentine military is a well-organized force constrained by the country's prolonged economic hardship; the country has recently experienced a strong recovery, and the military is implementing a modernization plan aimed at making the ground forces lighter and more responsive (2008)

Disputes international: Argentina continues to assert its claims to the UK-administered Falkland Islands (Islas Malvinas), South Georgia, and the South Sandwich Islands in its constitution, forcibly occupying the Falklands in 1982, but in 1995 agreed to no longer seek settlement by force; UK continues to reject Argentine requests for sovereignty talks; territorial claim in Antarctica partially overlaps UK and Chilean claims; uncontested dispute between Brazil and Uruguay over Braziliera/Brasiliera Island in the Quarai/Cuareim River leaves the tripoint with Argentina in question; in 2010, the ICJ ruled in favor of Uruguay's operation of two paper mills on the Uruguay River, which forms the border with Argentina; the two countries formed a joint pollution monitoring regime; the joint boundary commission, established by Chile and Argentina in 2001 has yet to map and demarcate the delimited boundary in the inhospitable Andean Southern Ice Field (Campo de Hielo Sur); contraband smuggling,

human trafficking, and illegal narcotic trafficking are problems in the porous areas of the border with Bolivia

Illicit drugs: a transshipment country for cocaine headed for Europe, heroin headed for the US, and ephedrine and pseudoephedrine headed for Mexico; some money-laundering activity, especially in the Tri-Border Area; law enforcement corruption; a source for precursor chemicals; increasing domestic consumption of drugs in urban centers, especially cocaine base and synthetic drugs (2008)

Background: Armenia prides itself on being the first nation to formally adopt Christianity (early 4th century). Despite periods of

autonomy, over the centuries Armenia came under the sway of various empires including the Roman, Byzantine, Arab, Persian, and Ottoman. During World War I in the western portion of Armenia, the Ottoman Empire instituted a policy of forced resettlement coupled with other harsh practices that resulted in at least 1 million Armenian deaths. The eastern area of Armenia was ceded by the Ottomans to Russia in 1828; this portion declared its independence in 1918, but was conquered by the Soviet Red Army in 1920.

Armenian leaders remain preoccupied by the long conflict with Azerbaijan over Nagorno-Karabakh, a primarily Armenian-populated region, assigned to Soviet Azerbaijan in the 1920s by Moscow. Armenia and Azerbaijan began fighting over the area in 1988; the struggle escalated after both countries attained independence from the Soviet Union in 1991. By May 1994, when a ceasefire

took hold, ethnic Armenian forces held not only Nagorno-Karabakh but also seven surrounding regions, approximately 14 percent of Azerbaijan's territory. The economies of both sides have been hurt by their inability to make substantial progress toward a peaceful resolution.

Turkey closed the common border with Armenia in 1993 in support of Azerbaijan in its conflict with Armenia over control of Nagorno-Karabakh and surrounding areas, further hampering Armenian economic growth. In 2009, senior Armenian leaders began pursuing rapprochement with Turkey, aiming to secure an opening of the border, but Turkey has not yet ratified the Protocols normalizing relations between the two countries. In January 2015, Armenia joined Russia, Belarus, and Kazakhstan as a member of the Eurasian Economic Union.

Economy overview: Under the old Soviet central planning system, Armenia developed a modern industrial sector, supplying machine tools, textiles, and other manufactured goods to sister republics, in exchange for raw materials and energy. Armenia has since switched to small-scale agriculture and away from the large agroindustrial complexes of the Soviet era. Armenia has only two open trade borders—Iran and Georgia—because its borders with Azerbaijan and Turkey have been closed since 1991 and 1993, respectively, as a result of Armenia's ongoing conflict with Azerbaijan over the separatist Nagorno-Karabakh region.

Armenia joined the WTO in January 2003. The government has made some improvements in tax and customs administration in recent years, but anti-corruption measures have been ineffective. Armenia will need to pursue additional economic reforms and strengthen the rule of law in order to regain economic growth and improve economic competitiveness and employment opportunities, especially given its economic isolation from two of its nearest neighbors, Turkey and Azerbaijan.

Armenia's geographic isolation, a narrow export base, and pervasive monopolies in important business sectors have made it particularly vulnerable to the sharp deterioration in the global economy and the economic downturn in Russia. Armenia is particularly dependent on Russian commercial and governmental support and most key Armenian infrastructure is Russian-owned and/or managed, especially in the energy sector, including electricity and natural gas. Remittances from expatriates working in Russia are equivalent to about 20% of GDP and partly offset the country's severe trade imbalance. Armenia joined Russia in the Eurasian Economic Union upon the bloc's launch in January 2015, even though the ruble's sharp depreciation in December 2014 led to currency instability, inflation, and a significant decrease in exports from Armenia to Russia.

Telephone system: *general assessment:* telecommunications investments have made major inroads in modernizing and upgrading the outdated telecommunications network inherited from the Soviet era; now 100% privately owned and undergoing modernization and expansion; mobile-cellular services monopoly terminated in late 2004, and a second and third provider began operations in 2005 and 2009 respectively

domestic: reliable modern fixe-dline and mobile-cellular services are available across Yerevan and in major cities and towns; significant but ever-shrinking gaps remain in mobile-cellular coverage in rural areas

international: country code—374; Yerevan is connected to the Trans-Asia-Europe fiber-optic cable through Iran; additional international service is available by microwave radio relay and landline connections to the other countries of the Commonwealth of Independent States, through the Moscow international switch, and by satellite to the rest of the world; satellite earth stations—3 (2008)

Broadcast media: 2 public TV networks operating alongside about 40 privately owned TV stations that provide local to near nationwide coverage; major Russian broadcast stations are widely available; subscription cable TV services are available in most regions; Public Radio of Armenia is a national, state-run broadcast network that operates alongside 21 privately owned radio stations; several major international broadcasters are available (2015)

Radio broadcast stations: AM 9, FM 16, shortwave 1 (2006)

Disputes—international: the dispute over the break-away Nagorno-Karabakh region and the Armenian military occupation of surrounding lands in Azerbaijan remains the primary focus of regional instability; residents have evacuated the former Soviet-era small ethnic enclaves in Armenia and Azerbaijan; Turkish authorities have complained that blasting from quarries in Armenia might be damaging the medieval ruins of Ani, on the other side of the Arpacay valley; in 2009, Swiss mediators facilitated an accord reestablishing diplomatic ties between Armenia and Turkey, but neither side has ratified the agreement and the rapprochement effort has faltered; local border forces struggle to control the illegal transit of goods and people across the porous, undemarcated Armenian, Azerbaijani, and Georgian borders; ethnic Armenian groups in the Javakheti region of Georgia seek greater autonomy from the Georgian Government

Refugees and internally displaced persons: *refugees (country of origin):* 14,994 (Syria ethnic Armenians) (2014)

Illicit drugs: illicit cultivation of small amount of cannabis for domestic consumption; minor transit point for illicit drugs—mostly opium and hashish moving—from Southwest Asia to Russia and to a lesser extent the rest of Europe

Background: Discovered and claimed for Spain in 1499, Aruba was acquired by the Dutch in 1636. The island's economy has been dominated by three main industries. A 19th century gold rush was followed by prosperity brought on by the opening in 1924 of an oil refinery. The last decades of the 20th century saw a boom in the tourism industry. Aruba seceded from the Netherlands Antilles in 1986 and became a separate, autonomous member of the Kingdom of the Netherlands. Movement toward full independence was halted at Aruba's request in 1990.

Economy overview: Tourism, petroleum bunkering,

hospitality, and financial and business services are the mainstays of the small open Aruban economy.

Tourist arrivals have rebounded strongly following a dip after the 2008 global financial crisis. Tourism now accounts for a majority of economic activity. Over 1 million tourists per year visit Aruba, with the large majority of those from the US. The rapid growth of the tourism sector has resulted in a substantial expansion of other activities. Construction continues to boom with hotel capacity five times the 1985 level. Aruba is heavily dependent on imports and is making efforts to expand exports to achieve a more desirable trade balance. Almost all consumer and capital goods are imported, with the US, the Netherlands, and Panama being the major suppliers.

Aruba weathered two major shocks in recent years: fallout from the global financial crisis, which had its largest impact on tourism, and the closure of its oil refinery in 2009. However, tourism and related industries have continued to grow, and the Aruban government is working to attract more diverse industries. Aruba's banking sector withstood the recession well, and unemployment has significantly decreased.

Geography—note: Ashmore Reef National Nature Reserve established in August 1983; Cartier Island Marine Reserve established in 2000

Population: no indigenous inhabitants

note: Indonesian fishermen are allowed access to the lagoon and fresh water at Ashmore Reef's West Island; access to East and Middle Islands is by permit only

Country name: *conventional long form:* Territory of Ashmore and Cartier Islands

conventional short form: Ashmore and Cartier Islands

etymology: named after British Captain Samuel ASHMORE, who first sighted his namesake island in 1811, and after the ship Cartier, from which the second island was discovered in 1800

Dependency status: territory of Australia; administered from Canberra by the Department of Regional Australia, Local Government, Arts and Sport

Background: The Atlantic Ocean is the second largest of the world's five oceans (after the Pacific Ocean, but larger than the Indian Ocean, Southern Ocean, and Arctic Ocean). The Kiel Canal (Germany), Oresund (Denmark-Sweden), Bosphorus (Turkey), Strait of Gibraltar (Morocco-Spain), and the Saint Lawrence Seaway (Canada-US) are important strategic access waterways. The decision by the International Hydrographic Organization in the spring of 2000 to delimit a fifth world ocean, the Southern Ocean, removed the portion of the Atlantic Ocean south of 60 degrees south latitude.

Location: body of water between Africa, Europe, the Arctic Ocean, the Americas, and the Southern Ocean

Geographic coordinates: 0 00 N, 25 00 W

Map references: Political Map of the World

Area: *total:* 76.762 million sq km

note: includes Baltic Sea, Black Sea, Caribbean Sea, Davis Strait, Denmark Strait, part of the Drake Passage, Gulf of Mexico, Labrador Sea, Mediterranean Sea, North Sea, Norwegian Sea, almost all of the Scotia Sea, and other tributary water bodies

Area—comparative: about 7.5 times the size of the US

Coastline: 111,866 km

Climate: tropical cyclones (hurricanes) develop off the coast of Africa near Cabo Verde and move westward into the Caribbean Sea; hurricanes can occur from May to December but are most frequent from August to November

Terrain: surface usually covered with sea ice in Labrador Sea, Denmark Strait, and coastal portions of the Baltic Sea from October to June; clockwise warm-water gyre (broad, circular system of currents) in the northern Atlantic, counterclockwise warm-water gyre in the southern Atlantic; the ocean floor is dominated by the Mid-Atlantic Ridge, a rugged north-south centerline for the entire Atlantic basin

Elevation: mean depth: -3,646 m

elevation extremes: *lowest point:* Milwaukee Deep in the Puerto Rico Trench -8,605m

highest point: sea level 0 m

Natural resources: oil and gas fields, fish, marine mammals (seals and whales), sand and gravel aggregates, placer deposits, polymetallic nodules, precious stones

Natural hazards: icebergs common in Davis Strait, Denmark Strait, and the northwestern Atlantic Ocean from February to August and have been spotted as far south as Bermuda and the Madeira Islands; ships subject to superstructure icing in extreme northern Atlantic from October to May; persistent fog can be a maritime hazard from May to September; hurricanes (May to December)

Environment—current issues: endangered marine species include the manatee, seals, sea lions, turtles, and whales; drift net fishing is hastening the decline of fish stocks and contributing to international disputes; municipal sludge pollution off eastern US, southern Brazil, and eastern Argentina; oil pollution in Caribbean Sea, Gulf of Mexico, Lake Maracaibo, Mediterranean Sea, and North Sea; industrial waste and municipal sewage pollution in Baltic Sea, North Sea, and Mediterranean Sea

Geography—note: major chokepoints include the Dardanelles,

Strait of Gibraltar, access to the Panama and Suez Canals; strategic straits include the Strait of Dover, Straits of Florida, Mona Passage, The Sound (Oresund), and Windward Passage; the Equator divides the Atlantic Ocean into the North Atlantic Ocean and South Atlantic Ocean

Country name: *etymology:* name derives from the Greek description of the waters beyond the Strait of Gibraltar, Atlantis thalassa, meaning “Sea of Atlas”

Economy—overview: The Atlantic Ocean provides some of the world’s most heavily trafficked sea routes, between and within the Eastern and Western Hemispheres. Other economic activity includes the exploitation of natural resources, e.g., fishing, dredging of aragonite sands (The Bahamas), and production of crude oil and natural gas (Caribbean Sea, Gulf of Mexico, and North Sea).

Ports and terminals: *major seaport(s):* Alexandria (Egypt), Algiers (Algeria), Antwerp (Belgium), Barcelona (Spain), Buenos Aires (Argentina), Casablanca (Morocco), Colon (Panama), Copenhagen (Denmark), Dakar (Senegal), Gdansk (Poland), Hamburg (Germany), Helsinki (Finland), Las Palmas (Canary Islands, Spain), Le Havre (France), Lisbon (Portugal), London (UK), Marseille (France), Montevideo (Uruguay), Montreal (Canada), Naples (Italy), New Orleans (US), New York (US), Oran (Algeria), Oslo (Norway), Peiraiefs or Piraeus (Greece), Rio de Janeiro (Brazil), Rotterdam (Netherlands), Saint Petersburg (Russia), Stockholm (Sweden)

Transportation—note: Kiel Canal and Saint Lawrence Seaway are two important waterways; significant domestic commercial and recreational use of Intracoastal Waterway on central and south Atlantic seaboard and Gulf of Mexico coast of US; the International Maritime Bureau reports the territorial waters of littoral states and offshore Atlantic waters as high risk for piracy and armed robbery against ships, particularly in the Gulf of Guinea off West Africa; in 2014, 41 commercial vessels were attacked in the Gulf of Guinea with 5 hijacked and 144 crew members taken hostage; hijacked vessels are often disguised and cargoes stolen; crews have been robbed and stores or cargoes stolen

Disputes—international: some maritime disputes (see littoral states)

Background: Prehistoric settlers arrived on the continent from Southeast Asia at least 40,000 years before the first Europeans began exploration in the 17th century. No formal territorial claims were made until 1770, when Capt. James COOK took possession of the east coast in the name of Great Britain (all of Australia was claimed as British territory in 1829 with the creation of the colony of Western Australia). Six colonies were created in the late 18th and 19th centuries; they federated and became the Commonwealth of Australia in 1901. The new country took advantage of its natural resources to

rapidly develop agricultural and manufacturing industries and to make a major contribution to the Allied effort in World Wars I and II. In recent decades, Australia has become an internationally competitive, advanced market economy due in large part to economic reforms adopted in the 1980s and its location in one of the fastest growing regions of the world economy. Long-term concerns include an aging population, pressure on infrastructure, and environmental issues such as floods, droughts, and bushfires. Australia is the driest inhabited continent on earth, making it particularly vulnerable to the challenges of climate change. Australia is home to 10 percent of the world's biodiversity, and a great number of its flora and fauna exist nowhere else in the world.

Flag description: blue with the flag of the UK in the upper hoist-side quadrant and a large seven-pointed star in the lower hoist-side quadrant known as the Commonwealth or Federation Star, representing the federation of the colonies of Australia in 1901; the star depicts one point for each of the six original states and one representing all of Australia's internal and external territories; on the fly half is a representation of the Southern Cross constellation in white with one small, five-pointed star and four larger, seven-pointed stars

National symbol(s): Southern Cross constellation (five, seven-pointed stars), kangaroo, emu; national colors: green, gold

National anthem: *name:* "Advance Australia Fair"

lyrics/music: Peter Dodds McCORMICK

note: adopted 1984; although originally written in the late 19th century, the anthem was not used for all official occasions until 1984; as a Commonwealth country, in addition to the national anthem, "God Save the Queen" is also played at Royal functions (see United Kingdom)

Economy—overview: Following two decades of continuous growth, low unemployment, contained inflation, very low public debt, and a strong and stable financial system, Australia enters 2016 facing a range of growth constraints, principally driven by a sharp fall in global prices of key export commodities. Demand for resources and energy from Asia and especially China has stalled and sharp drops in current prices have impacted growth.

The services sector is the largest part of the Australian economy, accounting for about 70% of GDP and 75% of jobs. Australia was comparatively unaffected by the global financial crisis as the banking system has remained strong and inflation is under control.

Australia benefited from a dramatic surge in its terms of trade in recent years, although this trend has reversed due to falling global commodity prices. Australia is a significant exporter of natural resources, energy, and food. Australia's abundant and diverse natural resources attract high levels of foreign investment and include extensive reserves of coal, iron, copper, gold, natural gas, uranium, and renewable energy sources. A series of major investments, such as the US\$40 billion Gorgon Liquid Natural Gas project, will significantly expand the resources sector.

Australia is an open market with minimal restrictions on imports of goods and services. The process of opening up has increased productivity, stimulated growth, and made the economy more flexible and dynamic. Australia plays an active role in the World Trade Organization, APEC, the G-20, and other trade forums. Australia's free trade agreement (FTA) with China entered into force in 2015, adding to existing FTAs with the Republic of Korea, Japan, Chile, Malaysia, New Zealand, Singapore, Thailand, and the US, and a regional FTA with ASEAN and New Zealand. Australia continues to negotiate bilateral agreements with India and Indonesia, as well as larger agreements with its Pacific neighbors and the Gulf Cooperation Council countries, and an Asia-wide Regional Comprehensive Economic Partnership that includes the ten ASEAN countries and China, Japan, Korea, New Zealand and India. Australia is also working on the Trans-Pacific Partnership Agreement with Brunei, Canada, Chile, Japan, Malaysia, Mexico, New Zealand, Peru, Singapore, the US, and Vietnam.

Background: Once the center of power for the large Austro-Hungarian Empire, Austria was reduced to a small republic after its defeat in World War I. Following annexation by Nazi Germany in 1938 and subsequent occupation by the victorious Allies in 1945, Austria's status remained unclear for a decade. A State Treaty signed in 1955 ended the occupation, recognized Austria's independence, and forbade unification with Germany. A constitutional law that same year declared the country's "perpetual neutrality" as a condition for Soviet military withdrawal. The Soviet Union's collapse in 1991 and Austria's entry into the EU in 1995 have altered the meaning of this neutrality. A prosperous, democratic country, Austria entered the EU Economic and Monetary Union in 1999.

Flag description: three equal horizontal bands of red (top), white, and red; the flag design is certainly one of the oldest—if not the oldest—national banners in the world; according to tradition, in 1191, following a fierce battle in the Third Crusade, Duke Leopold V of Austria's white tunic became completely blood-spattered; upon removal of his wide belt or sash, a white band was revealed; the red-white-red color combination was subsequently adopted as his banner

National symbol(s): golden eagle, edelweiss, Alpine gentian;
national colors: red, white

National anthem: *name:* “Bundeshymne” (Federal Hymn)

lyrics/music: Paula von PRERADOVIC/Wolfgang Amadeus MOZART or Johann HOLZER (disputed)

note: adopted 1947; the anthem is also known as “Land der Berge, Land am Strome” (Land of the Mountains, Land by the River); Austria adopted a new national anthem after World War II to replace the former imperial anthem composed by Franz Josef HAYDN, which had been appropriated by Germany in 1922 and was thereafter associated with the Nazi regime; a gendered version of the lyrics was adopted by the Austrian Federal Assembly in fall 2011 and became effective 1 January 2012

Economy—overview: Austria, with its well-developed market economy, skilled labor force, and high standard of living, is closely tied to other EU economies, especially Germany's. Its economy features a large service sector, a relatively sound industrial sector, and a small, but highly developed agricultural sector.

Economic growth has been relatively weak in recent years, approaching 0.9% in 2015. Austria's 5.8% unemployment rate, while low by European standards, is at its highest rate since the end of World War II, driven by an increased number of refugees and EU migrants entering the labor market. Without extensive vocational training programs and generous early retirement, the unemployment rate would be even higher. Although Austria's fiscal position compares favorably with other euro-zone countries, it faces several external risks, such as unexpectedly weak world economic growth threatening the export market, Austrian banks' continued exposure to Central and Eastern Europe, repercussions from the Hypo Alpe Adria bank collapse, political and economic uncertainties caused by the European sovereign debt crisis, the current refugee crisis, and continued unrest in Russia/Ukraine. Early signs point towards a slight improvement in 2016, driven by low interest rates on government debt. Currently, the budget deficit stands at 2.7% of GDP and public debt has reached a post-war high of 84.2% of the GDP.

Background: Azerbaijan a nation with a majority-Turkic and majority-Shia Muslim population—was briefly independent (from 1918 to 1920) following the collapse of the Russian Empire; it was subsequently incorporated into the Soviet Union for seven decades. Azerbaijan has yet to resolve its conflict with Armenia over Nagorno-Karabakh,

a primarily ethnic Armenian populated region that Moscow recognized in 1923 as an autonomous republic within Soviet Azerbaijan after Armenia and Azerbaijan disputed the territory's status. Armenia and Azerbaijan began fighting over the area in 1988; the struggle escalated after both countries attained independence from the Soviet Union in 1991. By May 1994, when a ceasefire took hold, ethnic Armenian forces held not only Nagorno Karabakh but also seven surrounding provinces in the territory of Azerbaijan. The OSCE Minsk Group, cochaired by the US, France, and Russia, is the framework established to mediate a peaceful resolution of the conflict. Corruption in the country is widespread, and the government, which

eliminated presidential term limits in a 2009 referendum, has been accused of authoritarianism. Although the poverty rate has been reduced and infrastructure investment has increased substantially in recent years due to revenue from oil and gas production, reforms have not adequately addressed weaknesses in most government institutions, particularly in the education and health sectors, as well as the court system.

National anthem: *name:* “Azerbaijan Marsi” (March of Azerbaijan)

lyrics/music: Ahmed JAVAD/Uzeyir HAJIBEYOV

note: adopted 1992; although originally written in 1919 during a brief period of independence, “Azerbaijan Marsi” did not become the official anthem until after the dissolution of the Soviet Union

Economy—overview: Azerbaijan’s high economic growth has been attributable to large and growing oil and gas exports, but some nonexport sectors also featured doubledigit growth, including construction, banking, and real estate. Oil exports through the Baku-Tbilisi-Ceyhan Pipeline, the Baku-Novorossiysk, and the Baku-Supsa pipelines remain the main economic driver, but efforts to boost Azerbaijan’s gas production are underway. The eventual completion of the geopolitically important Southern Gas Corridor between Azerbaijan and Europe will open up another, albeit, smaller source of revenue from gas exports. Azerbaijan has made only limited progress on instituting market-based economic reforms. Pervasive public and private sector corruption and structural economic inefficiencies remain a drag on longterm growth, particularly in nonenergy sectors. Several other obstacles impede Azerbaijan’s economic progress, including the need for stepped up foreign investment in the nonenergy sector and the continuing conflict with Armenia over the Nagorno-Karabakh region. Trade with Russia and the other former Soviet republics is declining in importance, while trade is building with Turkey and the nations of Europe. Longterm prospects depend on world oil prices, Azerbaijan’s ability to negotiate export routes for its growing gas production, and its ability to use its energy wealth to promote growth and spur employment in nonenergy sectors of the economy.

Illicit drugs: limited illicit cultivation of cannabis and opium poppy, mostly for CIS consumption; small government eradication program; transit point for Southwest Asian opiates bound for Russia and to a lesser extent the rest of Europe

Background: Lucayan Indians inhabited the islands when Christopher COLUMBUS first set foot in the New World on San Salvador in 1492. British settlement of the islands began in 1647; the islands became a colony in 1783. Since attaining independence from the UK in 1973, The Bahamas has prospered through tourism, international banking, and investment management. Because of its location, the country is a major transshipment point for illegal drugs, particularly shipments to the US and Europe, and its territory is used for smuggling illegal migrants into the US.

Flag description: three equal horizontal bands of aquamarine (top), gold, and aquamarine, with a black equilateral triangle based on the hoist side; the band colors represent the golden beaches of the islands surrounded by the aquamarine sea; black represents the vigor and force of a united people, while the pointing triangle indicates the enterprise and determination of the Bahamian people to develop the rich resources of land and sea

National symbol(s): blue marlin, flamingo, Yellow Elder flower; national colors: aquamarine, yellow, black

National anthem: *name:* "March On, Bahamaland!"

lyrics/music: Timothy GIBSON

note: adopted 1973; as a Commonwealth country, in addition to the national anthem, "God Save the Queen" serves as the royal anthem (see United Kingdom)

Economy—overview: The Bahamas is one of the wealthiest Caribbean countries with an economy heavily dependent on tourism

and offshore banking. Tourism together with tourism-driven construction and manufacturing accounts for approximately 60% of GDP and directly or indirectly employs half of the archipelago's labor force. Financial services constitute the second-most important sector of the Bahamian economy and, when combined with business services, account for about 35% of GDP. Manufacturing and agriculture combined contribute less than one 10th of GDP and show little growth, despite government incentives aimed at those sectors. The economy of The Bahamas shrank at an average pace of 0.8% annually between 2007 and 2011, and tourism, financial services, and construction—pillars of the national economy—remain subdued. Conditions are improving in the tourism sector, however, due to steady foreign investment led activity. New resort and marina developments are likely to provide sustained employment opportunities.

Background: In 1783, the Sunni Al-Khalifa family took power in Bahrain. In order to secure these holdings, it entered into a series of treaties with the UK during the 19th century that made Bahrain a British protectorate. The archipelago attained its independence in 1971. A steady decline in oil production and reserves since 1970 prompted Bahrain to take steps to diversify its economy, in the process developing successful petroleum processing and refining,

aluminum production, and hospitality and retail sectors, and also to become a leading regional banking center, especially with respect to Islamic finance. Bahrain's small size and central location among Gulf countries require it to play a delicate balancing act in foreign affairs among its larger neighbors.

The Sunni-led government has long struggled to manage relations with its large Shia-majority population. In early 2011, amid Arab uprisings elsewhere in the region, the Bahraini Government confronted similar pro-democracy and reform protests at home with police and military action, including deploying Gulf Cooperation Council security forces to Bahrain. Political talks throughout 2014 between the government and opposition and loyalist political groups failed to reach an agreement, prompting opposition political societies to boycott parliamentary and municipal council elections in late 2014. Ongoing dissatisfaction with the political status quo continues to factor into sporadic clashes between demonstrators and security forces.

National anthem: *name:* “Bahrainona” (Our Bahrain)

lyrics/music: unknown

note: adopted 1971; although Mohamed Sudqi AYYASH wrote the original lyrics, they were changed in 2002 following the transformation of Bahrain from an emirate to a kingdom

Economy—overview: Low oil prices have generated a budget deficit of at least a \$4 billion deficit in 2015, 13% of GDP. Bahrain has few options for covering this deficit, with meager foreign assets and a constrained borrowing ability, stemming in part from a sovereign debt rating averaging just above “junk” status. Oil comprises 86% of Bahraini budget revenues, despite past efforts to diversify its economy and to build communication and transport facilities for multinational firms with business in the Gulf. As part of its diversification plans,

Bahrain implemented a Free Trade Agreement (FTA) with the US in August 2006, the first FTA between the US and a Gulf state. Other major economic activities are production of aluminum—Bahrain's second biggest export after oil -finance, and construction. Bahrain continues to seek new natural gas supplies as feedstock to support its expanding petrochemical and aluminum industries. In 2011 Bahrain experienced economic setbacks as a result of domestic unrest driven by the majority Shia population, however, the economy recovered in 2012–15, partly as a result of improved tourism. In addition to addressing its current fiscal woes, Bahraini authorities face the long-term challenge of boosting Bahrain's regional competitiveness—especially regarding industry, finance, and tourism—and reconciling revenue constraints with popular pressure to maintain generous state subsidies and a large public sector.

Background: Muslim conversions and settlement in the region now referred to as Bangladesh began in the 10th century, primarily from Arab and Persian traders and preachers. Europeans established trading posts in the area in the 16th century. Eventually the area known as Bengal, primarily Hindu in the western section and mostly Muslim in the eastern half, became part of British India. Partition in 1947 resulted in an eastern wing of Pakistan in the Muslim-majority

area, which became East Pakistan. Calls for greater autonomy and animosity between the eastern and western wings of Pakistan led to a Bengali independence movement. That movement, led by the Awami League (AL) and supported by India, won the independence war for Bangladesh in 1971, during which at least 300,000 civilians died.

The post-independence AL government faced daunting challenges and in 1975 was overthrown by the military, triggering a series of military coups that resulted in a military-backed government and subsequent creation of the Bangladesh Nationalist Party (BNP) in 1978. That government also ended in a coup in 1981, followed by military-backed rule until democratic elections occurred in 1991. The BNP and AL alternated in power between 1991 and 2013, with the exception of a military-backed, emergency caretaker regime that suspended parliamentary elections planned for January 2007 in an effort to reform the political system and root out corruption. That government returned the country to fully democratic rule in December 2008 with the election of the AL and Prime Minister Sheikh HASINA. In January 2014, the incumbent AL won the national election by an overwhelming majority after the BNP boycotted, extending HASINA's term as prime minister. With the help of international development assistance, Bangladesh has reduced the poverty rate from over half of the population to less than a third, achieved Millennium Development Goals for maternal and child health, and made great progress in food security since independence. The economy has grown at an annual average of about 6% over the last two decades and the country reached World Bank lower-middle income status in 2015.

Economy—overview: Bangladesh's economy has grown roughly 6% per year since 1996 despite political instability, poor infrastructure, corruption, insufficient power supplies, slow implementation of economic reforms, and the 2008–09 global financial crisis and recession. Although more than half of GDP is generated through the services sector, almost half of Bangladeshis are employed in the agriculture sector, with rice as the single-most-important product. Garment exports, the backbone of Bangladesh's industrial sector, accounted for more than 80% of total exports and surpassed \$25 billion in 2015. The sector continues to grow, despite a series of factory accidents that have killed more than 1,000 workers, and crippling strikes, including a nationwide transportation blockade implemented by the political opposition during the first several months of 2015. Steady garment export growth combined with remittances from overseas Bangladeshis—which *totaled* about \$15 billion and 8% of GDP in 2015—are the largest contributors to Bangladesh's sustained economic growth and rising foreign exchange reserves.

Background: The island was uninhabited when first settled by the British in 1627. African slaves worked the sugar plantations established on the island until 1834 when slavery was abolished. The economy remained heavily dependent on sugar, rum, and molasses production through most of the 20th century. The gradual introduction of social and political reforms in the 1940s and 1950s led to complete independence from the UK in 1966. In the 1990s, tourism and manufacturing surpassed the sugar industry in economic importance.

Economy—overview: Barbados is the wealthiest and most developed country in the Eastern Caribbean and enjoys one of the

highest per capita incomes in the region. Historically, the Barbadian economy was dependent on sugarcane cultivation and related activities. However, in recent years the economy has diversified into light industry and tourism with about four-fifths of GDP and of exports being attributed to services. Offshore finance and information services are important foreign exchange earners and thrive from having the same time zone as eastern US financial centers and a relatively highly educated workforce. Barbados' tourism, financial services, and construction industries have been hard hit since the onset of the global economic crisis in 2008. Barbados' public debt-to-GDP ratio rose from 56% in 2008 to 101% in 2015. Growth prospects are limited because of a weak tourism outlook and planned austerity measures.

Military—note: the Royal Barbados Defense Force includes a land-based Troop Command and a small Coast Guard; the primary role of the land element is island defense against external aggression; the Command consists of a single, part-time battalion with a small regular cadre deployed throughout the island; the cadre increasingly supports the police in patrolling the coastline for smuggling and other illicit activities

Disputes—international: Barbados and Trinidad and Tobago abide by the April 2006 Permanent Court of Arbitration decision delimiting a maritime boundary and limiting catches of flying fish in Trinidad and Tobago's exclusive economic zone; joins other Caribbean states to counter Venezuela's claim that Aves Island sustains human habitation, a criterion under the UN Convention on the Law of the Sea, which permits Venezuela to extend its Economic Exclusion Zone/

continental shelf over a large portion of the eastern Caribbean Sea

Illicit drugs: one of many Caribbean transshipment points for narcotics bound for Europe and the US; offshore financial center

Background: After seven decades as a constituent republic of the USSR, Belarus attained its independence in 1991. It has retained closer political and economic ties to Russia than have any of the other former Soviet republics. Belarus and Russia signed a treaty on a two-state union on 8 December 1999 envisioning greater political and economic integration. Although Belarus agreed to a framework to carry out the accord, serious implementation has yet to take place. Since his election in July 1994 as the country's first and only directly

elected president, Aleksandr LUKASHENKO has steadily consolidated his power through authoritarian means and a centralized economic system. Government restrictions on political and civil freedoms, freedom of speech and the press, peaceful assembly, and religion have remained in place. The situation was somewhat aggravated after security services cracked down on mass protests challenging election results in the capital, Minsk, following the 2010 presidential election, but little protest occurred after the 2015 election.

election results: Aleksandr LUKASHENKO reelected president; percent of vote—Aleksandr LUKASHENKO (independent) 83.5%, Tatsiana KARATKEVICH (Tell the Truth) 4.4%, Sergey GAYDUKEVICH (LDP) 3.3%, other 8.8%; note—election marred by electoral fraud

Legislative branch: *description:* bicameral National Assembly or Natsionalnoye Sobraniye consists of the Council of the Republic or Sovet Respubliki (64 seats; 56 members indirectly elected by regional and Minsk city councils and 8 members appointed by the president; members serve 4-year terms) and the Chamber of Representatives or Palata Predstaviteley (110 seats; members directly elected in single-seat constituencies by absolute majority vote with a second round if needed; members serve 4-year terms); note—the US does not recognize the legitimacy of the National Assembly

elections: Palata Predstaviteley—last held on 23 September 2012 (next to be held in 2016); OSCE observers determined that the election was neither free nor impartial and that vote counting was problematic in a number of polling stations; pro-LUKASHENKO candidates won every seat with no opposition representation in the chamber; international observers determined that the previous election, on 28 September 2008, despite minor improvements, also fell short of democratic standards, with pro-LUKASHENKO candidates winning every seat

election results: Sovet Respubliki—percent of vote by party—NA; seats

by party—NA; Palata Predstaviteley—percent of vote by party—NA; seats by party—KPB 3, AP 1, Republican Party of Labor and Justice 1, no affiliation 104, vacant 1

Flag description: red horizontal band (top) and green horizontal band one-half the width of the red band; a white vertical stripe on the hoist side bears Belarusian national ornamentation in red; the red band color recalls past struggles from oppression, the green band represents hope and the many forests of the country

National symbol(s): no clearly defined current national symbol, the mounted knight known as Pahonia (the Chaser) is the traditional Belarusian symbol; national colors: green, red, white

National anthem: *name:* “My, Bielarusy” (We Belarusians)

lyrics/music: Mikhas KLIMKOVICH and Uladzimir KARYZNA/Nester SAKALOUSKI

note: music adopted 1955, lyrics adopted 2002; after the fall of the Soviet Union, Belarus kept the music of its Soviet-era anthem but adopted new lyrics; also known as “Dziaržauny himn Respubliki Bielarus” (State Anthem of the Republic of Belarus)

Economy—overview: As part of the former Soviet Union, Belarus had a relatively well-developed, though aging industrial base; it retained this industrial base—which is now outdated, energy inefficient, and dependent on subsidized Russian energy and preferential access to Russian markets—following the breakup of the USSR. The country also has a broad agricultural base which is largely inefficient and dependent on government subsidies. After an initial burst of capitalist reform from 1991–94, including privatization of smaller state enterprises and some service sector businesses, creation of institutions of private property, and development of entrepreneurship, Belarus’ economic development greatly slowed. About 80% of all industry remains in state hands, and foreign investment has been hindered by a climate hostile to business. A few banks, which had been privatized after independence, were renationalized. State banks account for 75% of the banking sector.

Economic output, which had declined for several years following the collapse of the Soviet Union, revived in the mid-2000s due to the boom in oil prices. Belarus has only small reserves of crude oil, though it imports most of its crude oil and natural gas from Russia at prices substantially below the world market. Belarus exported refined oil products at market prices produced from Russian crude oil purchased at a steep discount. In late 2006, Russia began a process of rolling back its subsidies on oil and gas to Belarus. Tensions over Russian energy reached a peak in 2010, when Russia stopped the export of all subsidized oil to Belarus save for domestic needs. In December 2010, Russia and Belarus reached a deal to restart the export of discounted oil to Belarus. In 2015, Belarus continued to import Russian crude oil at a discounted price. However, the plunge in global oil prices heavily reduced revenues.

Little new foreign investment has occurred in recent years. In 2011, a financial crisis began, triggered by government directed salary hikes

unsupported by commensurate productivity increases. The crisis was compounded by an increased cost in Russian energy inputs and an overvalued Belarusian ruble, and eventually led to a near three-fold devaluation of the Belarusian ruble in 2011. In November 2011, Belarus agreed to sell to Russia its remaining shares in Beltransgaz, the Belarusian natural gas pipeline operator, in exchange for reduced prices for Russian natural gas. Receiving part of a \$3 billion loan from the Russian-dominated Eurasian Economic Community (EurAsEC) Bail-out Fund, a \$1 billion loan from the Russian state-owned bank Sberbank, and the \$2.5 billion sale of Beltransgaz to Russian state-owned Gazprom helped stabilize the situation in 2012; nevertheless, the Belarusian currency lost more than 60% of its value, as the rate of inflation reached new highs in 2011 and 2012, before calming in 2013. In December 2013, Russia announced a new loan for Belarus of up to \$2 billion for 2014. Notwithstanding foreign assistance, the Belarusian economy continued to struggle under the weight of high external debt servicing payments and trade deficit. In mid-December 2014, structural economic shortcomings were aggravated by the devaluation of the Russian ruble and triggered a near 40% devaluation of the Belarusian ruble. Belarus entered 2015 with stagnant economic growth and reduced hard currency reserves, with under one month of import cover.

stateless persons: 5,635 (2015)

Trafficking in persons: *current situation:* Belarus is a source,

transit, and destination country for women, men, and children subjected to sex trafficking and forced labor; more victims are exploited within Belarus than abroad; Belarusians exploited abroad are primarily trafficked to Germany, Poland, Russian, and Turkey but also other European countries, the Middle East, Japan, Kazakhstan, and Mexico; Moldovans, Russians, Ukrainians, and Vietnamese are exploited in Belarus; state-sponsored forced labor is a continuing problem; students are forced to do farm labor without pay and military conscripts are forced to perform unpaid non-military work; the government has retained a decree forbidding workers in state-owned wood processing factories from leaving their jobs without their employers' permission

tier rating: Tier 3—Belarus does not fully comply with the minimum standards for the elimination of trafficking and was placed on Tier 3 after being on the Tier 2 Watch List for two consecutive years without making progress; government efforts to repeal state-sponsored forced labor policies and domestic trafficking were inadequate; no trafficking offenders were convicted in 2014, and the number of investigations progressively declined from 2005–2014; efforts to protect trafficking victims remain insufficient, with no identification and referral mechanism in place; care facilities were not trafficking-specific and were poorly equipped, leading most victims to seek assistance from private shelters (2015)

Illicit drugs: limited cultivation of opium poppy and cannabis, mostly for the domestic market; transshipment point for illicit drugs to and via Russia, and to the Baltics and Western Europe; a small and lightly regulated financial center; anti-money-laundering legislation does not meet international standards and was weakened further when know-your-customer requirements were curtailed in 2008; few investigations or prosecutions of money-laundering activities (2008)

Background: Belgium became independent from the Netherlands in 1830; it was occupied by Germany during World Wars I and II. The country prospered in the past half century as a modern, technologically advanced European state and member of NATO and the EU. Political divisions between the Dutch-speaking Flemings of the north and the French-speaking Walloons of the south have led in recent years to constitutional amendments granting these regions formal recognition and autonomy. Its capital, Brussels, is home to numerous international organizations including the EU and NATO.

Country name: *conventional long form:* Kingdom of Belgium

conventional short form: Belgium

local long form: Royaume de Belgique (French)/Koninkrijk België (Dutch)/Koenigreich Belgien (German)

local short form: Belgique/Belgie/Belgien

etymology: the name derives from the Belgae, an ancient Celtic tribal confederation that inhabited an area between the English Channel and the west bank of the Rhine in the first centuries B.C.

Government type: federal parliamentary democracy under a constitutional monarchy

Capital: *name:* Brussels

Geographic coordinates: 50 50 N, 4 20 E

time difference: UTC + 1 (6 hours ahead of Washington, DC, during Standard Time)

daylight saving time: +1hr, begins last Sunday in March; ends last Sunday in October

Administrative divisions: 3 regions (French: regions, singular—region; Dutch: gewesten, singular—gewest); Brussels-Capital Region, also known as Brussels Hoofdstedelijk Gewest (Dutch), Region de Bruxelles-Capitale (French long form), Bruxelles-Capitale (French short form); Flemish Region (Flanders), also known as Vlaams Gewest (Dutch long form), Vlaanderen (Dutch short form), Region Flamande (French long form), Flandre (French short form); Walloon Region (Wallonia), also known as Region Wallone (French long form), Wallonie (French short form), Waals Gewest (Dutch long form), Wallonie (Dutch short form)

note: as a result of the 1993 constitutional revision that furthered devolution into a federal state, there are now three levels of government (federal, regional, and linguistic community) with a

complex division of responsibilities; the 2012 sixth state reform transferred additional competencies from the federal state to the regions and linguistic communities

Independence: 4 October 1830 (a provisional government declared independence from the Netherlands); 21 July 1831 (King LEOPOLD I ascended to the throne)

National holiday: 21 July (1831) Ascension Day (ascension to the throne of King LEOPOLD I)

Constitution: drafted 25 November 1830, approved 7 February 1831, entered into force 26 July 1831, revised 14 July 1993 (creating a federal state); amended many times, last in 2014 (2016)

Legal system: civil law system based on the French Civil Code; note—Belgian law continues to be modified in conformance with the legislative norms mandated by the European Union; judicial review of legislative acts

International law organization participation: accepts compulsory ICJ jurisdiction with reservations; accepts ICt jurisdiction

Citizenship: *citizenship by birth:* no

citizenship by descent only: at least one parent must be a citizen of Belgium

dual citizenship recognized: yes

residency requirement for naturalization: 5 years

Suffrage: 18 years of age; universal and compulsory

Executive branch: *chief of state:* King PHILIPPE (since 21 July 2013); Heir Apparent Princess ELISABETH, daughter of the monarch

head of government: Prime Minister Charles MICHEL (since 11 October 2014); Deputy Prime Ministers Alexander DE CROO (since 22 October 2012), Jan JAMBON (since 11 October 2014), Kris PEETERS, Didier REYNDEERS (since 30 December 2008)

cabinet: Council of Ministers formally appointed by the monarch

elections/appointments: the monarchy is hereditary and constitutional; following legislative elections, the leader of the majority party or majority coalition usually appointed prime minister by the monarch and approved by Parliament

Legislative branch: *description:* bicameral Parliament consists of the Senate or Senaat in Dutch, Senat in French (71 seats; 40 members directly elected in multi-seat constituencies by proportional representation vote and 31 indirectly elected by Community

Parliaments; members serve 4-year terms) and the Chamber of Representatives or Kamer van Volksvertegenwoordigers in Dutch, Chambre des Représentants in French (150 seats; members directly elected in multi-seat constituencies by proportional representation vote; members serve 4-year terms)

note: the 1993 constitutional revision that further devolved Belgium into a federal state created three levels of government (federal, regional, and linguistic community) with a complex division of responsibilities; this reality leaves six governments, each with its own legislative assembly; changes above occurred since the sixth state reform

elections: Chamber of Deputies—last held on 23 May 2014 (next to be held in May 2019); note -elections will coincide with the EU's elections

election results: Chamber of Deputies—percent of vote by party—N-VA 20.3%, PS 11.7%, CD&V 11.6%, Open VLD 9.8%, MR 9.6%, SP.A 8.8%, Groen! 5.3%, CDH 5.0% Workers' Party 3.7%, VB 3.7%, Ecolo 3.3%, Defi 1.8%, PP 1.5%, other 3.9%; seats by party—N-VA 33, PS 23, CD&V 18, Open VLD 14, MR 20, SP.A 13, Groen! 6, CDH 9, Workers' Party 2, VB 3, Ecolo 6, Defi 2, PP 1

Judicial branch: *highest court(s):* Constitutional Court or Grondwettelijk Hof in Dutch and Cour constitutionnelle in French (consists of 12 judges—6 Dutch-speaking and 6 French-speaking); Supreme Court of Justice or Hof van Cassatie in Dutch and Cour de Cassation in French (court organized into 3 chambers: civil and commercial; criminal; social, fiscal, and armed forces; each chamber includes a Dutch division and a French division, each with a chairperson and 5–6 judges)

judge selection and term of office: Constitutional Court judges appointed by the monarch from candidates submitted by Parliament; judges appointed for life with mandatory retirement at age 70; Supreme Court judges appointed by the monarch from candidates submitted by the High Council of Justice, a 44-member independent body of judicial and non-judicial members; judges appointed for life

subordinate courts: Courts of Appeal; regional courts; specialized courts for administrative, commercial, labor, and audit issues; magistrate's courts; justices of the peace

National anthem: *name:* “La Brabanconne” (The Song of Brabant)

lyrics/music: Louis-Alexandre DECHET[French]

Victor CEULEMANS [Dutch]/Francois VAN CAMPENHOUT

note: adopted 1830; according to legend, Louis-Alexandre DECHET, an actor at the theater in which the revolution against the Netherlands began, wrote the lyrics with a group of young people in a Brussels cafe

Economy—overview: This modern, open, and private-enterprise-based economy has capitalized on its central geographic location, highly developed transport network, and diversified industrial and commercial base. Industry is concentrated mainly in the more heavily-populated region of Flanders in the north. With few natural resources, Belgium imports substantial quantities of raw materials and exports a large volume of manufactures, making its economy vulnerable to shifts in foreign demand, particularly with Belgium’s EU trade partners. Roughly three-quarters of Belgium’s trade is with other EU countries. In 2015, Belgian GDP grew by 1.4%, the unemployment rate stabilized at 8.6%, and the budget deficit was 2.7% of GDP. Prime Minister Charles MICHEL’s center-right government has pledged to further reduce the deficit in response to EU pressure to reduce Belgium’s high public debt, which remains above 100% of GDP, but such efforts could also dampen economic growth. In addition to restrained public spending, low wage growth and high unemployment promise to curtail a more robust recovery in private consumption. The government has pledged to pursue a reform program to improve Belgium’s competitiveness, including changes to

tax policy, labor market rules, and welfare benefits. These changes risk worsening tensions with trade unions and triggering extended strikes.

Illicit drugs: growing producer of synthetic drugs and cannabis; transit point for US-bound ecstasy; source of precursor chemicals for South American cocaine processors; transshipment point for cocaine, heroin, hashish, and marijuana entering Western Europe; despite a strengthening of legislation, the country remains vulnerable to money laundering related to narcotics, automobiles, alcohol, and tobacco; significant domestic consumption of ecstasy

Background: Belize was the site of several Mayan city states until their decline at the end of the first millennium A.D. The British and Spanish disputed the region in the 17th and 18th centuries; it formally became the colony of British Honduras in 1854. Territorial disputes

between the UK and Guatemala delayed the independence of Belize until 1981. Guatemala refused to recognize the new nation until 1992 and the two countries are involved in an ongoing border dispute. Tourism has become the mainstay of the economy. Current concerns include the country's heavy foreign debt burden, high unemployment, growing involvement in the Mexican and South American drug trade, high crime rates, and one of the highest HIV/AIDS prevalence rates in Central America.

Demographic profile: Migration continues to transform Belize's population. About 16% of Belizeans live abroad, while immigrants constitute approximately 15% of Belize's population. Belizeans seeking job and educational opportunities have preferred to emigrate to the United States rather than former colonizer Great Britain because of the United States' closer proximity and stronger trade ties with Belize. Belizeans also emigrate to Canada, Mexico, and English-speaking Caribbean countries. The emigration of a large share of Creoles (Afro-Belizeans) and the influx of Central American immigrants, mainly Guatemalans, Salvadorans, and Hondurans, has changed Belize's ethnic composition. Mestizos have become the largest ethnic group, and Belize now has more native Spanish speakers than English or Creole speakers, despite English being the official language. In addition, Central American immigrants are establishing new communities in rural areas, which contrasts with the urbanization trend seen in neighboring countries. Recently, Chinese, European, and North American immigrants have become more frequent.

Immigration accounts for an increasing share of Belize's population growth rate, which is steadily falling due to fertility decline. Belize's declining birth rate and its increased life expectancy are creating an aging population. As the elderly population grows and nuclear families replace extended households, Belize's government will be challenged to balance a rising demand for pensions, social services, and healthcare for its senior citizens with the need to reduce poverty and social inequality and to improve sanitation.

Flag description: blue with a narrow red stripe along the top and the bottom edges; centered is a large white disk bearing the coat of arms; the coat of arms features a shield flanked by two workers in front of a mahogany tree with the related motto SUB UMBRA FLOREO (I Flourish in the Shade) on a scroll at the bottom, all encircled by a green garland of 50 mahogany leaves; the colors are those of the two main political parties: blue for the PUP and red for the UDP; various elements of the coat of arms—the figures, the tools, the mahogany tree, and the garland of leaves—recall the logging industry that led to British settlement of Belize

note: Belize's flag is the only national flag that depicts human beings; two British overseas territories, Montserrat and the British Virgin Islands, also depict humans

National symbol(s): Baird's tapir (a large, browsing, forest-dwelling mammal), keel-billed toucan, Black Orchid; national colors: red, blue

National anthem: name: "Land of the Free"

lyrics/music: Samuel Alfred HAYNES/Selwyn Walford YOUNG

note: adopted 1981; as a Commonwealth country, in addition to the national anthem, "God Save the Queen" serves as the royal anthem (see United Kingdom)

Economy—overview: Tourism is the number one foreign exchange earner in this small economy, followed by exports of crude oil, marine products, sugar, citrus, and bananas. The government's expansionary monetary and fiscal policies, initiated in September 1998, led to GDP growth averaging nearly 4% in 1999–2007. Oil discoveries in 2006 bolstered this growth and oil exploration continues, but production has fallen in recent years and future oil revenues remain uncertain. Growth slipped to 0% in 2009, due to the global economic slowdown, natural disasters, and a temporary drop in the price of oil, but growth grew to 2.2% in 2015.

Although Belize has the third highest per capita income in Central America, the average income figure masks a huge income disparity between rich and poor, and a key government objective remains reducing poverty and inequality with the help of international donors. High unemployment, a growing trade deficit and heavy foreign debt burden continue to be major concerns.

Disputes—international: Guatemala persists in its territorial claim to half of Belize, but agrees to the Line of Adjacency to keep Guatemalan squatters out of Belize's forested interior; both countries agreed in April 2012 to hold simultaneous referenda, scheduled for 6 October 2013, to decide whether to refer the dispute to the ICJ for binding resolution, but this vote was suspended indefinitely; Belize and Mexico are working to solve minor border demarcation discrepancies arising from inaccuracies in the 1898 border treaty

Trafficking in persons: *current situation:* Belize is a source, destination, and transit country for men, women, and children subjected to forced labor and sex trafficking; the coerced prostitution of women and children by family members has not led to arrests; child sex tourism, involving primarily US citizens, is on the rise; sex trafficking and forced labor of Belizean and foreign women and LGBT individuals occurs in bars, nightclubs, brothels, and domestic service; workers from Central America, Mexico, and Asia may fall victim to forced labor in restaurants, shops, agriculture, and fishing

tier rating: Tier 3—Belize does not comply fully with the

minimum standards for the elimination of human trafficking and is not making significant efforts to do so; authorities did not initiate any new trafficking investigations or prosecutions, and cases from previous years remain pending; law enforcement efforts to use informal means to identify and refer victims were ineffective and draft procedures for referring victims to services are still not finalized; trafficking victims were more commonly arrested, detained, or deported based on immigration violations than provided with assistance; the government did not make progress in implementing the 2012–2014 anti-trafficking national strategic plan (2015)

Illicit drugs: transshipment point for cocaine; small-scale illicit producer of cannabis, primarily for local consumption; offshore sector money-laundering activity related to narcotics trafficking and other crimes (2008)

Background: Present day Benin was the site of Dahomey, a West African kingdom that rose to prominence in about 1600 and over the next two and a half centuries became a regional power, largely based on its slave trade. Coastal areas of Dahomey began to be controlled by the French in the second half of the 19th century; the entire kingdom was conquered by 1894. French Dahomey achieved independence in 1960; it changed its name to the Republic of Benin in 1975.

A succession of military governments ended in 1972 with the rise to power of Mathieu KEREKOU and the establishment of a government based on Marxist-Leninist principles. A move to representative government began in 1989. Two years later, free elections ushered in former Prime Minister Nicephore SOGLO as president, marking the first successful transfer of power in Africa from a dictatorship to a democracy. KEREKOU was returned to power by elections held in 1996 and 2001, though some irregularities were alleged. KEREKOU stepped down at the end of his second term in 2006 and was succeeded by Thomas YAYI Boni, a political outsider and independent. YAYI, who won a second five-year term in March 2011, has attempted to stem corruption and has strongly promoted accelerating Benin's economic growth.

Economy—overview: The free market economy of Benin remains underdeveloped and dependent on subsistence agriculture, cotton production, and regional trade. Cotton is a key export commodity; high prices supported export earnings. Growth in real output has averaged 6.5% since 2014. Inflation has subsided and remained 1% over the past several years.

An insufficient electrical supply continues to hamper Benin’s economic growth though the government recently has taken steps to increase domestic power production. Private foreign direct investment is small, and foreign aid accounts for the majority of investment in infrastructure projects.

Benin’s 2001 privatization policy continues in telecommunications, water, electricity, and agriculture. Benin has appealed for international assistance to mitigate piracy against commercial shipping in its territory. Though security remains a problem, the Port of Cotonou has made progress towards implementing the International Ship and Port Facility Security (ISPS) Code in an effort to remain competitive. Projects included in Benin’s \$307 million Millennium Challenge Corporation (MCC) compact (2006–2011) were designed to increase investment and private sector activity by improving key institutional and physical infrastructure. The four projects focused on access to land, access to financial services, access to justice, and access to markets (including modernization of the port). The Port of Cotonou is the largest component of Benin’s economy with revenues projected to account for more than 40% of Benin’s national budget. Realizing its

economic potential requires further efforts to infrastructure upgrades, stemming corruption, and expanding access to foreign markets in Nigeria and neighboring landlocked countries. In September 2015, Benin signed a MCC second Compact for \$375 million that is designed to strengthen the national utility service provider, attract private sector investment, fund infrastructure investments in electricity generation and distribution, and develop off-grid electrification for poor and unserved households. In order to raise growth, Benin plans to attract more foreign investment, place more emphasis on tourism, facilitate the development of new food processing systems and agricultural products, encourage new information and communication technology, and establish Independent Power Producers (IPP).

Background: Bermuda was first settled in 1609 by shipwrecked English colonists heading for Virginia. Self-governing since 1620, Bermuda is the oldest and most populous of the British overseas territories. Vacationing to the island to escape North American winters first developed in Victorian times. Tourism continues to be important to the island's economy, although international business has overtaken it in recent years. Bermuda has also developed into a highly successful offshore financial center. A referendum on independence from the UK was soundly defeated in 1995.

Economy—overview: Tourism accounts for about 5% of Bermuda’s GDP, but a much larger share of employment. Over 80% of its visitors come from the US. The sector struggled in the wake of the global recession of 2008–09. International business, which consists primarily of reinsurance and other financial services, is the real bedrock of Bermuda’s economy, consistently accounting for about 85% of the island’s GDP. Even this sector, however, has lost roughly 5,000 high-paying expatriate jobs since 2008, weighing heavily on household consumption and retail sales. Bermuda must import almost everything. Agriculture and industry are limited due to the small size of the island. Bermuda’s economy entered its seventh straight year of recession in 2015. Unemployment is 9%, public debt is growing and exceeds \$2.3 billion, the government pension fund faces a \$2.4 billion shortfall, and the economy has not attracted significant amounts of new foreign investment. Bermuda’s FY 2015–16 budget projects a

12% larger deficit than FY14/15. The government announced it would borrow \$125 million in 2015 to meet current operating expenses. Still, Bermuda enjoys the fourth highest per capita income in the world, about 70% higher than that of the US.

Disputes—international: none

Background: Following Britain's victory in the 1865 Duar War, Britain and Bhutan signed the Treaty of Sinchulu, under which Bhutan would receive an annual subsidy in exchange for ceding land to British India. Ugyen WANGCHUCK—who had served as the de facto ruler of an increasingly unified Bhutan and had improved relations with the British toward the end of the 19th century—was named king in 1907. Three years later, a treaty was signed whereby the British agreed not to interfere in Bhutanese internal affairs, and Bhutan allowed Britain to direct its foreign affairs. Bhutan negotiated a

similar arrangement with independent India after 1947. Two years later, a formal Indo-Bhutanese accord returned to Bhutan a small piece of the territory annexed by the British, formalized the annual subsidies the country received, and defined India's responsibilities in defense and foreign relations. Under a succession of modernizing monarchs beginning in the 1950s, Bhutan joined the UN in 1971 and slowly continued its engagement beyond its borders. In March 2005, King Jigme Singye WANGCHUCK unveiled the government's draft constitution—which introduced major democratic reforms—and held a national referendum for its approval. In December 2006, the King abdicated the throne in favor of his son, Jigme Khesar Namgyel WANGCHUCK. In early 2007, India and Bhutan renegotiated their treaty, eliminating the clause that stated that Bhutan would be "guided by" India in conducting its foreign policy, although Thimphu continues to coordinate closely with New Delhi. Elections for seating the country's first parliament were completed in March 2008; the king ratified the country's first constitution in July 2008. Bhutan experienced a peaceful turnover of power following parliamentary elections in 2013, which resulted in the defeat of the incumbent party. The disposition of some 18,000 refugees of the roughly 100,000 who fled or were forced out of Bhutan in the 1990s—and who are housed in two UN refugee camps in Nepal—remains unresolved.

Economy—overview: Bhutan's economy, small and less developed, is based largely on hydropower, agriculture, and forestry, which provide the main livelihood for more than half of the population. Because rugged mountains dominate the terrain and make the building of roads and other infrastructure difficult and expensive, industrial production is primarily of the cottage industry type. The economy is closely aligned with India's through strong trade and monetary links and is dependent on India for financial assistance and migrant laborers for development projects, especially for road construction. Bhutan inked a pact in December 2014 to expand duty-free trade with Bangladesh, the only trade partner with which Bhutan enjoys a surplus. Multilateral development organizations administer most educational, social, and environment programs, and take into account the government's desire to protect the country's environment and cultural traditions. For example, the government, in its cautious expansion of the tourist sector, encourages visits by upscale, environmentally conscientious tourists. Complicated controls and uncertain policies in areas such as industrial licensing, trade, labor, and finance continue to hamper foreign investment. Bhutan's largest export—hydropower to India—could spur sustainable growth in the coming years if Bhutan resolves chronic delays in construction. Bhutan currently taps only 5% of its 30,000-megawatt hydropower potential and is behind schedule in building 12 new hydropower dams with a combined capacity of 10,000 megawatts by 2020 in accordance with a deal signed in 2008 with India. The high volume of imported materials to build hydropower plants has expanded Bhutan's trade and current account deficits. However, Bhutan and India in April 2014 agreed to begin four additional hydropower projects, which would generate 2,120 megawatts in *total*. Bhutan also is exploring energy exports to Bangladesh.

Military service age and obligation: 18 years of age for voluntary military service; no conscription; militia training is compulsory for males aged 20–25, over a 3-year period (2012)

Disputes—international: lacking any treaty describing the boundary, Bhutan and China continue negotiations to establish a common boundary alignment to resolve territorial disputes arising from substantial cartographic discrepancies, the largest of which lie in Bhutan's northwest and along the Chumbi salient

Background: Bolivia, named after independence fighter Simon BOLIVAR, broke away from Spanish rule in 1825; much of its subsequent history has consisted of a series of nearly 200 coups and counter coups. Democratic civilian rule was established in 1982, but leaders have faced difficult problems of deep-seated poverty, social unrest, and illegal drug production.

In December 2005, Bolivians elected Movement Toward Socialism leader Evo MORALES president—by the widest margin of any leader since the restoration of civilian rule in 1982—after he ran on a promise to change the country’s traditional political class and empower the nation’s poor, indigenous majority. In December 2009 and October 2014, President MORALES easily won reelection. His party maintained control of the legislative branch of the government, which has allowed him to continue his process of change. In October 2011, the country held its first judicial elections to select judges for the four highest courts. MORALES has publicly described the elected judiciary as a failed experiment that has not resolved judicial backlogs or extended pre-trial detention. He has called for a public referendum on the judicial system.

note: results among surveys vary based on the wording of the ethnicity question and the available response choices; the 2001 national census did not provide “mestizo” as a response choice, resulting in a much higher proportion of respondents identifying themselves as belonging to one of the available indigenous ethnicity choices; the use of “mestizo” and “cholo” varies among response choices in surveys, with surveys using the terms interchangeably, providing one or the other as a response choice, or providing the two as separate response choices (2009 est.)

Demographic profile: Bolivia ranks at or near the bottom among Latin American countries in several areas of health and development, including poverty, education, fertility, malnutrition, mortality, and life expectancy. On the positive side, more children are being vaccinated and more pregnant women are getting prenatal care and having skilled health practitioners attend their births. Bolivia’s income inequality is the highest in Latin America and one of the highest in the world. Public education is of poor quality, and educational opportunities are among the most unevenly distributed in Latin America, with girls and indigenous and rural children less likely to be literate or to complete primary school. The lack of access to education and family planning services helps to sustain Bolivia’s high fertility rate—approximately three children per woman. Bolivia’s lack of clean water and basic sanitation, especially in rural areas, contributes to health problems. Almost 7% of Bolivia’s population lives abroad, primarily to work in Argentina, Brazil, Spain, and the United States. In recent years, more restrictive immigration policies in Europe and the United States have increased the flow of Bolivian emigrants to neighboring Argentina and Brazil.

Economy—overview: Bolivia is a resource rich country with strong growth attributed to captive markets for natural gas exports—to Brazil and Argentina. Gas accounts for roughly 50% of Bolivia's *total* exports and will fund more than half of its 2015 budget. However, the country remains one of the least developed countries in Latin America because of state-oriented policies that deter investment and growth.

Following a disastrous economic crisis during the early 1980s, reforms spurred private investment, stimulated economic growth, and cut poverty rates in the 1990s. The period 2003–05 was characterized by political instability, racial tensions, and violent protests against plans—subsequently abandoned—to export Bolivia's newly discovered natural gas reserves to large Northern Hemisphere markets. In 2005, the government passed a controversial hydrocarbons law that imposed significantly higher royalties and required foreign firms then operating under risk-sharing contracts to surrender all production to the state energy company in exchange for a predetermined service fee. The global recession slowed growth, but Bolivia recorded the highest growth rate in South America during 2009 and has averaged 5.3% growth each year since 2009. High commodity prices between 2010 and 2013 sustained rapid growth and large trade surpluses. The global decline in oil prices in late 2014 exerted downward pressure on the price Bolivia receives for exported gas and resulted in lower GDP growth rates and losses in government revenue in 2015. A lack of foreign investment in the key sectors of mining and hydrocarbons, along with conflict among social groups, pose challenges for the

Bolivian economy. In 2015, President Evo MORALES expanded efforts to court international investment and boost Bolivia's energy production capacity. MORALES passed an investment law and promised not to nationalize additional industries in an effort to improve the investment climate.

Disputes—international: Chile and Peru rebuff Bolivia's reactivated claim to restore the Atacama corridor, ceded to Chile in 1884, but Chile offers instead unrestricted but not sovereign maritime access through Chile for Bolivian natural gas; contraband smuggling, human trafficking, and illegal narcotic trafficking are problems in the porous areas of the border with Argentina

Trafficking in persons: *current situation:* Bolivia is a source country for men, women, and children subjected to forced labor and sex trafficking domestically and abroad; indigenous children are particularly vulnerable; Bolivia is a source country for men, women, and children subjected to forced labor and sex trafficking domestically

and abroad; rural and poor Bolivians, most of whom are indigenous, and LGBT youth are particularly vulnerable; Bolivians perform forced labor domestically in mining, ranching, agriculture, and domestic service, and a significant number are in forced labor abroad in sweatshops, agriculture, domestic service, and the informal sector; women and girls are sex trafficked within Bolivia and in neighboring countries, such as Argentina, Peru, and Chile; a limited number of women from nearby countries are sex trafficked in Bolivia

tier rating: Tier 2 Watch List—Bolivia does not comply fully with the minimum standards for the elimination of human trafficking; however, it is making significant efforts to do so; the government did not demonstrate overall increasing anti-trafficking efforts, and poor data collection made it difficult to assess the number of investigations, prosecutions, and victim identifications and referrals to care services; authorities did not adequately differentiate between human trafficking and other crimes, such as domestic violence and child abuse; law enforcement failed to implement an early detection protocol for identifying trafficking cases and lacked a formal process for identifying trafficking victims among vulnerable populations; specialized victim services were inadequately funded and virtually non-existent for adult women and male victims (2015)

Illicit drugs: world's third-largest cultivator of coca (after Colombia and Peru) with an estimated 30,000 hectares under cultivation in 2011, a decrease of 13 percent over 2010; third largest producer of cocaine, estimated at 265 metric tons potential pure cocaine in 2011, a 29 percent increase over 2010; transit country for Peruvian and Colombian cocaine destined for Brazil, Argentina, Chile, Paraguay, and Europe; weak border controls; some money-laundering activity related to narcotics trade; major cocaine consumption (2013)

Background: Bosnia and Herzegovina declared sovereignty in October 1991 and independence from the former Yugoslavia on 3 March 1992 after a referendum boycotted by ethnic Serbs. The Bosnian Serbs -supported by neighboring Serbia and Montenegro—responded with armed resistance aimed at partitioning the republic along ethnic lines and joining Serb-held areas to form a “Greater Serbia.” In March 1994, Bosniaks and Croats reduced the number of warring factions from three to two by signing an agreement creating a joint Bosniak-Croat Federation of Bosnia and Herzegovina. On 21 November 1995, in Dayton, Ohio, the warring parties initialed a peace agreement that ended three years of interethnic civil strife (the final agreement was signed in Paris on 14 December 1995).

The Dayton Peace Accords retained Bosnia and Herzegovina’s international boundaries and created a multiethnic and democratic government charged with conducting foreign, diplomatic, and fiscal policy. Also recognized was a second tier of government composed of two entities roughly equal in size: the predominantly Bosniak-Bosnian

Croat Federation of Bosnia and Herzegovina and the predominantly Bosnian Serb-led Republika Srpska (RS). The Federation and RS governments are responsible for overseeing most government functions. Additionally, the Dayton Accords established the Office of the High Representative to oversee the implementation of the civilian aspects of the agreement. The Peace Implementation Council at its conference in Bonn in 1997 also gave the High Representative the authority to impose legislation and remove officials, the so-called “Bonn Powers.” An original NATO-led international peacekeeping force (IFOR) of 60,000 troops assembled in 1995 was succeeded over time by a smaller, NATO-led Stabilization Force (SFOR). In 2004, European Union peacekeeping troops (EUFOR) replaced SFOR. Currently, EUFOR deploys around 600 troops in theater in a security assistance and training capacity.

Economy—overview: Bosnia has a transitional economy with limited market reforms. The economy relies heavily on the export of metals, energy, textiles, and furniture as well as on remittances and foreign aid. A highly decentralized government hampers economic policy coordination and reform, while excessive bureaucracy and a segmented market discourage foreign investment. Foreign banks, primarily from Austria and Italy, now control most of the banking sector. The konvertibilna marka (convertible mark or BAM)—the national currency introduced in 1998—is pegged to the euro, and confidence in the currency and the banking sector has remained stable. Interethnic warfare in Bosnia and Herzegovina caused production to plummet by 80% from 1992 to 1995 and unemployment to soar, but the economy made progress until 2008, when the global economic crisis caused a downturn. Bosnia and Herzegovina became a full member of the Central European Free Trade Agreement in September 2007.

Bosnia’s private sector is growing slowly, but foreign investment has dropped sharply since 2007. Government spending—including transfer payments—remains high, at roughly 40% of GDP, because of redundant government offices at the national, sub-national, and

municipal level. High unemployment remains the most serious macroeconomic problem. Successful implementation of a value-added tax in 2006 provided a steady source of revenue for the government and helped rein in gray-market activity. National-level statistics have also improved over time but a large share of economic activity remains un official and unrecorded.

Bosnia and Herzegovina's top economic priorities are: acceleration of integration into the EU; strengthening the fiscal system; public administration reform; World Trade Organization membership; and securing economic growth by fostering a dynamic, competitive private sector.

Illicit drugs: increasingly a transit point for heroin being trafficked to Western Europe; minor transit point for marijuana; remains highly vulnerable to money-laundering activity given a primarily cash-based and unregulated economy, weak law enforcement, and instances of corruption

Background: Formerly the British protectorate of Bechuanaland, Botswana adopted its new name at independence in 1966. More than four decades of uninterrupted civilian leadership, progressive social policies, and significant capital investment have created one of the most stable economies in Africa. The ruling Botswana Democratic Party has won every election since independence; President Ian KHAMA was reelected for a second term in 2014. Mineral extraction, principally diamond mining, dominates economic activity, though tourism is a growing sector due to the country's conservation practices and extensive nature preserves. Botswana has one of the world's highest known rates of HIV/AIDS infection, but also one of Africa's most progressive and comprehensive programs for dealing with the disease.

Economy—overview: Botswana has maintained one of the world's highest economic growth rates since independence in 1966. Diamond mining has fueled much of the expansion and currently accounts for one quarter of GDP, approximately 85% of export earnings, and about one-third of the government's revenues. Tourism is the secondary earner of foreign exchange and many Batswana engage in subsistence farming and cattle raising. Through fiscal discipline and sound management, Botswana transformed itself from one of the poorest countries in the world to a middle-income country with a per capita GDP of \$17,700 in 2015. Two major investment services rank Botswana as the best credit risk in Africa. Botswana's economy is highly correlated with global economic trends because of its heavy reliance on a single luxury export. According to official government statistics, unemployment is 19.5%, but unofficial estimates run much higher. De Beers, a major international diamond company, signed a 10-year deal with Botswana in 2012 and moved its rough stone sorting and trading division from London to Gaborone in 2013. The move was geared to support the development of Botswana's nascent downstream diamond industry.

Following the 2008 global recession Botswana's economy recovered in 2010. However, the Government of Botswana estimates the economy grew by only 1% in 2015. This was primarily due to the downturn in the global diamond market; water and power shortages also played a role. In October 2015 President Ian KHAMA announced a stimulus plan to boost the economy through projects in agricultural production, construction, manufacturing, and tourism development. In 2016, Botswana entered its fourth year of drought, detrimental to Botswana's small, but vital agriculture sector. The prevalence of HIV/AIDS is second highest in the world and threatens the country's impressive economic gains.

Trafficking in persons: *current situation:* Botswana is a source, transit, and destination country for women and children subjected to sex trafficking and forced labor; young Botswana serving as domestic workers, sometimes sent by their parents, may be denied education and basic necessities or experience confinement and abuse indicative of forced labor; Botswana girls and women also are forced into prostitution domestically; adults and children of San ethnicity were reported to be in forced labor on farms and at cattle posts in the country's rural west

tier rating: Tier 2 Watch List—Botswana does not fully comply with the minimum standards for the elimination of trafficking; however, it is making significant efforts to do so; an anti-trafficking act was passed at the beginning of 2014, but authorities did not investigate, prosecute, or convict any offenders or government officials complicit in trafficking or operationalize victim identification and referral procedures based on the new law; the government sponsored a radio campaign to familiarize the public with the issue of human trafficking (2015)

Background: This uninhabited, volcanic, Antarctic island is almost entirely covered by glaciers making it difficult to approach; it is recognized as the most remote island on Earth. Bouvet Island was discovered in 1739 by a French naval officer after whom it is named. No claim was made until 1825, when the British flag was raised. In 1928, the UK waived its claim in favor of Norway, which had occupied the island the previous year. In 1971, Norway designated Bouvet Island and the adjacent territorial waters a nature reserve. Since 1977, Norway has run an automated meteorological station and studied foraging strategies and distribution of fur seals and penguins on the island. In February 2006, an earthquake weakened the station's foundation causing it to be blown out to sea in a winter storm. Norway erected a new research station in 2014 that can hold six people for periods of two to four months.

Background: Following more than three centuries under Portuguese rule, Brazil gained its independence in 1822, maintaining a monarchical system of government until the abolition of slavery in 1888 and the subsequent proclamation of a republic by the military in 1889. Brazilian coffee exporters politically dominated the country until populist leader Getulio VARGAS rose to power in 1930. By far the largest and most populous country in South America, Brazil underwent more than a half century of populist and military government until 1985, when the military regime peacefully ceded power to civilian rulers. Brazil continues to pursue industrial and agricultural growth and development of its interior. Having successfully weathered a period of global financial difficulty in the late 20th century, Brazil was seen as one of the world's strongest emerging markets and a contributor to global growth. The awarding of the 2014 FIFA World Cup and 2016 Summer Olympic Games, the first ever to be held in South America, was seen as symbolic of the country's rise. However, since about 2013, Brazil has been plagued by

a shrinking economy, growing unemployment, and rising inflation. Political scandal resulted in the impeachment of President Dilma ROUSSEFF in May 2016; her vice president, Michel TEMER, is currently acting president.

Demographic profile: Brazil's rapid fertility decline since the 1960s is the main factor behind the country's slowing population growth rate, aging population, and fast-paced demographic transition. Brasilia has not taken full advantage of its large working-age population to develop its human capital and strengthen its social and economic institutions but is funding a study abroad program to bring advanced skills back to the country. The current favorable age structure will begin to shift around 2025, with the labor force shrinking and the elderly starting to compose an increasing share of the total population. Well-funded public pensions have nearly wiped out poverty among the elderly, and Bolsa Familia and other social programs have lifted tens of millions out of poverty. More than half of Brazil's population is considered middle class, but poverty and income inequality levels remain high; the Northeast, North, and Center-West, women, and black, mixed race, and indigenous populations are disproportionately affected. Disparities in opportunities foster social exclusion and contribute to Brazil's high crime rate, particularly violent crime in cities and favelas. Brazil has traditionally been a net recipient of immigrants, with its southeast being the prime destination. After the importation of African slaves was outlawed in the mid-19th century, Brazil sought Europeans (Italians, Portuguese, Spaniards, and Germans) and later Asians (Japanese) to work in agriculture, especially coffee cultivation. Recent immigrants come mainly from Argentina, Chile, and Andean countries (many are unskilled illegal migrants) or are returning Brazilian nationals. Since Brazil's economic downturn in the 1980s, emigration to the United States, Europe, and Japan has been rising but is negligible relative to Brazil's total population. The majority of these emigrants are well-educated and middle-class. Fewer Brazilian peasants are emigrating to neighboring countries to take up agricultural work.

Flag description: green with a large yellow diamond in the center bearing a blue celestial globe with 27 white five-pointed stars; the globe has a white equatorial band with the motto ORDEME PROGRESSO (Order and Progress); the current flag was inspired by the banner of the former Empire of Brazil (1822-1889); on the imperial flag, the green represented the House of Braganza of Pedro I, the first Emperor of Brazil, while the yellow stood for the Habsburg Family of his wife; on the modern flag the green represents the forests of the country and the yellow rhombus its mineral wealth (the diamond shape roughly mirrors that of the country); the blue circle

and stars, which replaced the coat of arms of the original flag, depict the sky over Rio de Janeiro on the morning of 15 November 1889—the day the Republic of Brazil was declared; the number of stars has changed with the creation of new states and has risen from an original 21 to the current 27 (one for each state and the Federal District)

note: one of several flags where a prominent component of the design reflects the shape of the country; other such flags are those of Bosnia and Herzegovina, Eritrea, and Vanuatu

National symbol(s): Southern Cross constellation; national colors: green, yellow, blue

National anthem: *name:* “Hino Nacional Brasileiro” (Brazilian National Anthem)

lyrics/music: Joaquim Osorio Duque ESTRADA/Francisco Manoel DA SILVA

note: music adopted 1890, lyrics adopted 1922; the anthem’s music, composed in 1822, was used unofficially for many years before it was adopted

Economy—overview: Characterized by large and well-developed agricultural, mining, manufacturing, and service sectors, and a rapidly expanding middle class, Brazil’s economy outweighs that of all other South American countries, and Brazil is expanding its presence in world markets. Since 2003, Brazil has steadily improved its macroeconomic stability, building up foreign reserves, and reducing its debt profile by shifting its debt burden toward real denominated and domestically held instruments. Since 2008, Brazil became a net external creditor and all three of the major ratings agencies awarded investment grade status to its debt. After strong growth in 2007 and 2008, the onset of the global financial crisis hit Brazil in 2008. Brazil experienced two quarters of recession, as global demand for Brazil’s commodity-based exports dwindled and external credit dried up. However, Brazil was one of the first emerging markets to begin a recovery. In 2010, consumer and investor confidence revived and GDP growth reached 7.5%, the highest growth rate in the past 25 years. GDP growth has slowed since 2011, due to several factors, including overdependence on exports of raw commodities, low productivity, high operational costs, persistently high inflation, and low levels of investment. After reaching historic lows of 4.8% in 2014, the unemployment rate remains low, but is rising. Brazil’s traditionally high level of income inequality has declined for the last 15 years.

Brazil's fiscal and current account balances have eroded during the past four years as the government attempted to boost economic growth through targeted tax cuts for industry and incentives to spur household consumption. After winning reelection in October 2014 by a historically narrow margin, President Dilma ROUSSEFF appointed a new economic team led by Finance Minister Joaquim LEVY, who introduced a fiscal austerity package intended to restore the primary account surplus (before interest expenditures are included) to 1.2% of GDP and preserve the country's investment-grade sovereign credit rating. LEVY encountered political headwinds and an economy facing more challenges than he anticipated. The target for the primary account surplus fell to a deficit of 2%, and two of the three main credit rating agencies downgraded Brazil to "junk" status.

Brazil seeks to strengthen its workforce and its economy over the long run by imposing local content and technology transfer requirements on foreign businesses, by investing in education through social programs such as Bolsa Familia and the Brazil Science Mobility Program, and by investing in research in the areas of space, nanotechnology, healthcare, and energy.

Background: Formerly administered as part of the British Crown Colony of Mauritius, the British Indian Ocean Territory (BIOT) was established as an overseas territory of the UK in 1965. A number of the islands of the territory were later transferred to the Seychelles when it attained independence in 1976. Subsequently, BIOT has consisted only of the six main island groups comprising the Chagos Archipelago. Only Diego Garcia, the largest and most southerly of the islands, is inhabited. It contains a joint UK-US naval support facility and hosts one of four dedicated ground antennas (the others are on Ascension (Saint Helena, Ascension, and Tristan da Cunha), Kwajalein (Marshall Islands), and at Cape Canaveral, Florida (US)) that assist in the operation of the Global Positioning System (GPS) navigation system. The US Air Force also operates a telescope array on Diego Garcia as part of the Ground-Based Electro-Optical Deep Space Surveillance System (GEODSS) for tracking orbital debris, which can be a hazard to spacecraft and astronauts. Between 1967 and 1973, former agricultural workers, earlier residents in the islands, were

relocated primarily to Mauritius, but also to the Seychelles. Negotiations between 1971 and 1982 resulted in the establishment of a trust fund by the British Government as compensation for the displaced islanders, known as Chagossians. Beginning in 1998, the islanders pursued a series of lawsuits against the British Government seeking further compensation and the right to return to the territory. In 2006 and 2007, British court rulings invalidated the immigration policies contained in the 2004 BIOT Constitution Order that had excluded the islanders from the archipelago, but upheld the special military status of Diego Garcia. In 2008, the House of Lords, as the final court of appeal in the UK, ruled in favor of the British Government by overturning the lower court rulings and finding no right of return for the Chagossians.

Disputes—international: Mauritius and Seychelles claim the Chagos Islands; negotiations between 1971 and 1982 resulted in the establishment of a trust fund by the British Government as compensation for the displaced islanders, known as Chagossians, who were evicted between 1967–73; in 2001, the former inhabitants of the archipelago were granted UK citizenship and the right of return; in 2006 and 2007, British court rulings invalidated the immigration policies contained in the 2004 BIOT Constitution Order that had excluded the islanders from the archipelago; in 2008 a House of Lords' decision overturned lower court rulings, once again denying the right of return to Chagossians; in addition, the UK created the world's largest marine protection area around the Chagos islands prohibiting the extraction of any natural resources therein

Background: First inhabited by Arawak and later by Carib Indians, the Virgin Islands were settled by the Dutch in 1648 and then annexed by the English in 1672. The islands were part of the British colony of the Leeward Islands from 1872–1960; they were granted autonomy in 1967. The economy is closely tied to the larger and more populous US Virgin Islands to the west; the US dollar is the legal currency.

National symbol(s): zenaida dove, white cedar flower; national colors: yellow, green, red, white, blue

National anthem: note: as a territory of the United Kingdom, “God Save the Queen” is official (see United Kingdom)

Economy—overview: The economy, one of the most stable and prosperous in the Caribbean, is highly dependent on tourism generating an estimated 45% of the national income. More than 934,000 tourists, mainly from the US, visited the islands in 2008. Because of traditionally close links with the US Virgin Islands, the British Virgin Islands has used the US dollar as its currency since 1959.

Livestock raising is the most important agricultural activity; poor soils limit the islands’ ability to meet domestic food requirements.

In the mid-1980s, the government began offering offshore registration to companies wishing to incorporate in the islands, and incorporation fees now generate substantial revenues. Roughly 400,000 companies were on the offshore registry by yearend 2000. The adoption of a comprehensive insurance law in late 1994, which provides a blanket of confidentiality with regulated statutory gateways for investigation of criminal offenses, made the British Virgin Islands even more attractive to international business.

Illicit drugs: transshipment point for South American narcotics destined for the US and Europe; large offshore financial center makes it vulnerable to money laundering

Background: The Sultanate of Brunei's influence peaked between the 15th and 17th centuries when its control extended over coastal areas of northwest Borneo and the southern Philippines. Brunei subsequently entered a period of decline brought on by internal strife over royal succession, colonial expansion of European powers, and piracy. In 1888, Brunei became a British protectorate; independence was achieved in 1984. The same family has ruled Brunei for over six centuries. Brunei benefits from extensive petroleum and natural gas fields, the source of one of the highest per capita GDPs in the world.

Economy—overview: Brunei is an energy-rich sultanate on the northern coast of Borneo in Southeast Asia. Brunei boasts a well-educated, largely English-speaking population; excellent infrastructure; and a stable government intent on attracting foreign investment. Crude oil and natural gas production account for approximately 65% of GDP and 95% of exports, with Japan as the primary export market.

Per capita GDP is among the highest in the world, and substantial income from overseas investment supplements income from domestic hydrocarbon production. Bruneian citizens do not pay personal income taxes, and the government provides free medical services and free education through the university level. The Bruneian Government wants to diversify its economy away from hydrocarbon exports to other industries such as information and communications technology and halal manufacturing. Brunei’s trade in 2016 is set to increase following its regional economic integration in the ASEAN Economic Community, and the expected ratification of the Trans-Pacific Partnership trade agreement.

Disputes—international: per Letters of Exchange signed in 2009, Malaysia in 2010 ceded two hydrocarbon concession blocks to Brunei in exchange for Brunei's sultan dropping claims to the Limbang corridor, which divides Brunei; nonetheless, Brunei claims a maritime boundary extending as far as a median with Vietnam, thus asserting an implicit claim to Louisa Reef

Refugees and internally displaced persons: *stateless persons:* 20,524 (2015); note—thousands of stateless persons, often ethnic Chinese, are permanent residents and their families have lived in Brunei for generations; obtaining citizenship is difficult and requires individuals to pass rigorous tests on Malay culture, customs, and language; stateless residents receive an International Certificate of Identity, which enables them to travel overseas; the government is considering changing the law prohibiting non-Bruneians, including stateless permanent residents, from owning land

Illicit drugs: drug trafficking and illegally importing controlled substances are serious offenses in Brunei and carry a mandatory death penalty

Background: The Bulgars, a Central Asian Turkic tribe, merged with the local Slavic inhabitants in the late 7th century to form the first Bulgarian state. In succeeding centuries, Bulgaria struggled with the Byzantine Empire to assert its place in the Balkans, but by the end of the 14th century the country was overrun by the Ottoman Turks. Northern Bulgaria attained autonomy in 1878 and all of Bulgaria became independent from the Ottoman Empire in 1908. Having fought on the losing side in both World Wars, Bulgaria fell within the Soviet sphere of influence and became a People's Republic in 1946. Communist domination ended in 1990, when Bulgaria held its first multiparty election since World War II and began the contentious process of moving toward political democracy and a market economy while combating inflation, unemployment, corruption, and crime. The country joined NATO in 2004 and the EU in 2007.

Economy—overview: Bulgaria, a former communist country that entered the EU on 1 January 2007, averaged more than 6% annual growth from 2004 to 2008, driven by significant amounts of bank lending, consumption, and foreign direct investment.

Successive governments have demonstrated a commitment to economic reforms and responsible fiscal planning, but the global downturn sharply reduced domestic demand, exports, capital inflows, and industrial production. GDP contracted by 5.5% in 2009, and has been slow to recover in the years since. Despite a favorable investment regime, including low, flat corporate income taxes, significant challenges remain. Corruption in public administration, a weak judiciary, and the presence of organized crime continue to hamper the country’s investment climate and economic prospects.

Trafficking in persons: *current situation:* Bulgaria is a source and, to a lesser extent, a transit and destination country for men, women, and children subjected to sex trafficking and forced labor; Bulgaria is one of the main sources of human trafficking in the EU; women and children are increasingly sex trafficked domestically, as well as in Europe, Russia, the Middle East, and the US; adults and children become forced laborers in agriculture, construction, and the service sector in Europe, Israel, and Zambia; Romanian girls are also subjected to sex trafficking in Bulgaria

tier rating: Tier 2 Watch List—Bulgaria does not fully comply with the minimum standards for the elimination of trafficking; however, it is making significant efforts to do so; in 2014, authorities prosecuted

and convicted fewer traffickers and issued suspended sentences for the majority of those convicted; victim protection efforts declined and were minimal relative to the number of victims identified; funding for the state's two NGO-operated shelters was significantly cut, forcing them to close; specialized services for child and adult male victims were non-existent; the government took action to combat trafficking-related complicity among public officials and police officers (2015)

Illicit drugs: major European transshipment point for Southwest Asian heroin and, to a lesser degree, South American cocaine for the European market; limited producer of precursor chemicals; vulnerable to money laundering because of corruption, organized crime; some money laundering of drug-related proceeds through financial institutions (2008)

Background: Burkina Faso (formerly Upper Volta) achieved independence from France in 1960. Repeated military coups during the 1970s and 1980s were followed by multiparty elections in the early 1990s. Former President Blaise COMPAORE (1987–2014) resigned in late October 2014 following popular protests against his efforts to amend the Constitution's two-term presidential limit. By mid-November, a framework for an interim government was adopted under the terms of the National Transition Charter. An interim administration, led by President Michel KAFANDO and Prime Minister Yacouba Isaac ZIDA, began organizing presidential and legislative elections planned for October 2015, but these were postponed during a weeklong failed coup in September. The rescheduled elections were held on 29 November, and Roch Marc Christian KABORE was elected president in the first round. Burkina Faso's high population growth and limited natural resources result in poor economic prospects for the majority of its citizens.

Economy—overview: Burkina Faso is a poor, landlocked country that depends on adequate rainfall. About 80% of the population is engaged in subsistence farming and cotton is the main cash crop. The country has few natural resources and a weak industrial base. Cotton and gold are Burkina Faso's key exports—gold has accounted for about three-quarters of the country's total export revenues. Burkina Faso's economic growth and revenue depends on global prices for the two commodities. The Burkinabe economy experienced high levels of growth over the last few years, and the country has seen an upswing in gold exploration, production, and exports. Burkina Faso experienced a number of public protests over the high cost of living, corruption, and other socioeconomic issues in 2013, while the fall of the COMPAORE government in 2014 and failed coup in September 2015 disrupted economic activity and strained government finances. A new three-year IMF program was approved in 2013 to focus on improving the quality of public investment and ensuring inclusive growth. Political insecurity in neighboring Mali, unreliable energy supplies, and poor transportation links pose long-term challenges.

Disputes—international: adding to illicit cross-border activities, Burkina Faso has issues concerning unresolved boundary alignments with its neighbors; demarcation is currently underway with Mali; the dispute with Niger was referred to the ICJ in 2010, and a dispute over several villages with Benin persists; Benin retains a border dispute with Burkina Faso around the town of Koualou

Refugees and internally displaced persons: refugees (country of origin): 33,069 (Mali) (2016)

Trafficking in persons: *current situation:* Burkina Faso is a source, transit, and destination country for women and children subjected to forced labor and sex trafficking; Burkinabe children are forced to work as farm hands, gold panners and washers, street vendors, domestic servants, and beggars or in the commercial sex trade, with some transported to nearby countries; to a lesser extent,

Burkinabe women are recruited for legitimate jobs in the Middle East or Europe and subsequently forced into prostitution; women from other West African countries are also lured to Burkina Faso for work and subjected to forced prostitution, forced labor in restaurants, or domestic servitude

tier rating: Tier 2 Watch List—Burkina Faso does not fully comply with the minimum standards for the elimination of trafficking; however, it is making significant efforts to do so; law enforcement efforts decreased in 2014, with a significant decline in trafficking prosecutions (none for forced begging involving Koranic school teachers—a prevalent form of trafficking) and no convictions, a 2014 law criminalizing the sale of children, child prostitution, and child pornography is undermined by a provision allowing offenders to pay a fine in lieu of serving prison time proportionate to the crime; the government sustained efforts to identify and protect a large number of child victims, relying on support from NGOs and international organizations; nationwide awareness-raising activities were sustained, but little was done to stop forced begging (2015)

Background: Various ethnic Burmese and ethnic minority city-states or kingdoms occupied the present borders through the 19th century. Over a period of 62 years (1824–1886), Britain conquered Burma and incorporated the country into its Indian Empire. Burma was administered as a province of India until 1937 when it became a separate, self-governing colony; in 1948, Burma attained independence from the British Commonwealth. Gen. NE WIN dominated the government from 1962 to 1988, first as military ruler, then as self-appointed president, and later as political kingpin. In response to widespread civil unrest, NE WIN resigned in 1988, but within months the military crushed student-led protests and took power.

Multiparty legislative elections in 1990 resulted in the main opposition party—the National League for Democracy (NLD)—winning a landslide victory. Instead of handing over power, the junta placed NLD leader (and Nobel Peace Prize recipient) AUNG SAN SUU KYI under house arrest from 1989 to 1995, 2000 to 2002, and from May 2003 to November 2010. In late September 2007, the ruling junta brutally suppressed protests over increased fuel prices led by prodemocracy activists and Buddhist monks, killing at least 13 people and arresting thousands for participating in the demonstrations. In early May 2008, Burma was struck by Cyclone Nargis, which left over 138,000 dead and tens of thousands injured and homeless. Despite this tragedy, the junta proceeded with its May constitutional referendum, the first vote in Burma since 1990. Legislative elections held in November 2010, which the NLD boycotted and were considered flawed by many in the international community, saw the ruling Union Solidarity and Development Party garner over 75% of the seats.

The national legislature convened in January 2011 and selected former Prime Minister THEIN SEIN as president. Although the vast majority of national-level appointees named by THEIN SEIN are former or current military officers, the government initiated a series of political and economic reforms leading to a substantial opening of the long-isolated country. These reforms included releasing hundreds of political prisoners, signing a nationwide cease-fire with several of the country's ethnic armed groups, pursuing legal reform, and gradually reducing restrictions on freedom of the press, association, and civil society. At least due in part to these reforms, AUNG SAN SUUKYI was elected to the national legislature in April 2012 and became chair of the Committee for Rule of Law and Tranquility. Burma served as chair of the Association of Southeast Asian Nations (ASEAN) for 2014. In a flawed but largely credible national legislative election in November 2015 featuring more than 90 political parties, the NLD again won a

landslide victory. Using its overwhelming majority in both houses of parliament, the NLD elected HTIN KYAW, AUNG SAN SUU KYI's confidant and long-time NLD supporter, as president. Burma's first civilian government after more than five decades of military dictatorship was sworn into office on 30 March 2016.

note: adopted 1948; Burma is among a handful of non-European nations that have anthems rooted in indigenous traditions; the

beginning portion of the anthem is a traditional Burmese anthem before transitioning into a Western-style orchestrated work

Economy—overview: Since the transition to a civilian government in 2011, Burma has begun an economic overhaul aimed at attracting foreign investment and reintegrating into the global economy. Economic reforms have included establishing a managed float of the Burmese kyat in 2012, re-writing the Foreign Investment Law in 2012 to allow more foreign investment participation, granting the Central Bank operational independence in July 2013, enacting a new Anti-corruption Law in September 2013, and granting licenses to nine foreign banks in 2014 and four more foreign banks in 2016.

The government's commitment to reform, and the subsequent easing of most Western sanctions, led to accelerated growth in 2013 and 2014. In 2015, growth slowed because of political uncertainty in an election year, summer floods, and external factors, including China's slowdown and lower commodity prices. Burma's abundant natural resources, young labor force, and proximity to Asia's dynamic economies have attracted foreign investment in the energy sector, garment industry, information technology, and food and beverages. Pledged foreign direct investment grew from \$4.1 billion in FY 2013 to \$8.1 billion in FY 2014.

Despite these improvements, living standards have not improved for the majority of the people residing in rural areas. Burma remains one of the poorest countries in Asia—approximately 26% of the country's 51 million people live in poverty. The previous government's isolationist policies and economic mismanagement have left Burma with poor infrastructure, endemic corruption, underdeveloped human resources, and inadequate access to capital, which will require a major commitment to reverse. The Burmese government has been slow to address impediments to economic development such as insecure land rights, a restrictive trade licensing system, an opaque revenue collection system, and an antiquated banking system. The newly elected government, led by AUNG SAN SUU KYI, will likely focus on accelerating agricultural productivity and land reforms, modernizing and opening the financial sector, and improving fiscal management.

Arakan State, living as refugees in Cox's Bazar; Burmese border authorities are constructing a 200 km (124 mi) wire fence designed to deter illegal cross-border transit and tensions from the military build-up along border with Bangladesh in 2010; Bangladesh referred its maritime boundary claims with Burma and India to the International Tribunal on the Law of the Sea; Burmese forces attempting to dig in to the largely autonomous Shan State to rout local militias tied to the drug trade, prompts local residents to periodically flee into neighboring Yunnan Province in China; fencing along the India-Burma international border at Manipur's Moreh town is in progress to check illegal drug trafficking and movement of militants; over 100,000 mostly Karen refugees and asylum seekers fleeing civil strife, political upheaval, and economic stagnation in Burma were living in remote camps in Thailand near the border as of April 2016

Refugees and internally displaced persons: *IDPs*: 644,000 (government offensives against armed ethnic minority groups near its borders with China and Thailand) (2015)

stateless persons: 938,000 (2015); note—Rohingya Muslims, living in Rakhine State, are Burma's main group of stateless people; the Burmese Government does not recognize the Rohingya as a "national race" and stripped them of their citizenship under the 1982 Citizenship law, categorizing them as "non-national" or "foreign residents"; under the Rakhine State Action Plan drafted in October 2014, the Rohingya must demonstrate their family has lived in Burma for at least 60 years to qualify for a lesser naturalized citizenship and the classification of Bengali or be put in detention camps and face deportation; native-born but non-indigenous people, such as Indians, are also stateless; the Burmese Government does not grant citizenship to children born outside of the country to Burmese parents who left the country illegally or fled persecution, such as those born in Thailand

note: estimate does not include stateless IDPs or stateless persons in IDP-like situations because they are included in estimates of IDPs (2015)

Trafficking in persons: *current situation*: Burma is a source country for men, women, and children trafficked for the purpose of forced labor and for women and children subjected to sex trafficking; Burmese adult and child labor migrants travel to East Asia, the Middle East, South Asia, and the US, where men are forced to work in the fishing, manufacturing, forestry, and construction industries and women and girls are forced into prostitution, domestic servitude, or forced labor in the garment sector; some Burmese economic migrants and Rohingya asylum seekers have become forced laborers on Thai

fishing boats; some military personnel and armed ethnic groups unlawfully conscript child soldiers or coerce adults and children into forced labor; domestically, adults and children from ethnic areas are vulnerable to forced labor on plantations and in mines, while children may also be subject to forced prostitution, domestic service, and begging

tier rating: Tier 2 Watch List—Burma does not fully comply with the minimum standards for the elimination of trafficking, but it is making significant efforts to do so; the government has a written plan that, if implemented, would constitute making a significant effort toward meeting the minimum standard for eliminating human trafficking; in 2014, law enforcement continued to investigate and prosecute cross-border trafficking offenses but did little to address domestic trafficking; no civilians or government officials were prosecuted or convicted for the recruitment of child soldiers, a serious problem that is hampered by corruption and the influence of the military; victim referral and protection services remained inadequate, especially for men, and left victims vulnerable to being re-trafficked; the government coordinated anti-trafficking programs as part of its five-year national action plan (2015)

Illicit drugs: world's third largest producer of illicit opium with an estimated production in 2012 of 690 metric tons, an increase of 13% over 2011, and poppy cultivation in 2012 *totalled* 51,000 hectares, a 17% increase over 2011; production in the United Wa State Army's areas of greatest control remains low; Shan state is the source of 94.5% of Burma's poppy cultivation; lack of government will to take on major narcotrafficking groups and lack of serious commitment against money laundering continues to hinder the overall antidrug effort; major source of methamphetamine and heroin for regional consumption (2013)

Background: Burundi's first democratically elected president was assassinated in October 1993 after only 100 days in office, triggering widespread ethnic violence between Hutu and Tutsi factions. More than 200,000 Burundians perished during the conflict that spanned almost a dozen years. Hundreds of thousands of Burundians were internally displaced or became refugees in neighboring countries. An internationally brokered power-sharing agreement between the Tutsi-dominated government and the Hutu rebels in 2003 paved the way for a transition process that integrated defense forces, and established a new constitution and elected a majority Hutu government in 2005. The government of President Pierre NKURUNZIZA, who was reelected in 2010 and again in a disputed election in 2015, continues to face many political and economic challenges.

Economy—overview: Burundi is a landlocked, resource-poor country with an underdeveloped manufacturing sector. Agriculture accounts for over 40% of GDP and employs more than 90% of the population. Burundi's primary exports are coffee and tea, which account for 90% of foreign exchange earnings. Thus, Burundi's export earnings—and its ability to pay for imports—rest primarily on weather conditions and international coffee and tea prices, although exports are a relatively small share of GDP. Burundi is heavily dependent on aid from bilateral and multilateral donors. Foreign aid in 2014 represented 42% of Burundi's national income, the second highest rate in Sub-Saharan Africa. Burundi joined the East African Community (EAC) in 2009. An ethnic war that ended in 2005 resulted in more than 200,000 deaths, forced more than 48,000 refugees into Tanzania, and displaced 140,000 others internally. Political stability, aid flows, and economic activity improved following the end of the civil war, but underlying weaknesses—a high poverty rate, poor education rates, a weak legal system, a poor transportation network, overburdened utilities, and low administrative capacity—have prevented the government from implementing planned economic reforms. Government corruption has also hindered the development of a private sector as companies have to deal with ever changing rules. The purchasing power of most Burundians has decreased as wage increases have not kept pace with inflation.

In 2015, Burundi's economy suffered from political turmoil over President NKURUNZIZA's controversial third term. Blocked transportation routes disrupted the flow of agricultural goods. And donors withdrew aid, increasing Burundi's budget deficit. When the unrest ends, regional infrastructure improvements driven by the EAC and funded by the World Bank may help improve Burundi's transport connections and lower transportation costs.

IDPs: undetermined (some ethnic Tutsis remain displaced from intercommunal violence that broke out after the 1993 coup and fighting between government forces and rebel groups; violence since April 2015 has caused internal displacement, but exact figures are unknown because of insecurity and fear of reprisal attacks for self-identification as an IDP) (2015)

stateless persons: 1,302 (2015)

Trafficking in persons: *current situation:* Burundi is a source country for children and possibly women subjected to forced labor and sex trafficking; business people recruit Burundian girls for prostitution domestically, as well as in Rwanda, Kenya, Uganda, and the Middle East, and recruit boys and girls for forced labor in Burundi and Tanzania; children and young adults are coerced into forced labor in farming, mining, informal commerce, fishing, or collecting river stones for construction; sometimes family, friends, and neighbors are complicit in exploiting children, at times luring them in with offers of educational or job opportunities

tier rating: Tier 3—Burundi does not comply fully with the minimum standards for the elimination of human trafficking and is not making significant efforts to do so; corruption, a lack of political will, and limited resources continue to hamper efforts to combat human trafficking; in 2014, the government did not inform judicial and law enforcement officials of the enactment of an anti-trafficking law or how to implement it and approved—but did not fund—its national anti-trafficking action plan; authorities again failed to identify trafficking victims or to provide them with adequate protective services; the government has focused on transnational child trafficking but gave little attention to its domestic child trafficking problem and adult trafficking victims (2015)

Background: The uninhabited islands were discovered and colonized by the Portuguese in the 15th century; Cabo Verde subsequently became a trading center for African slaves and later an important coaling and resupply stop for whaling and transatlantic shipping. Following independence in 1975, and a tentative interest in unification with Guinea-Bissau, a one-party system was established and maintained until multi-party elections were held in 1990. Cabo Verde continues to exhibit one of Africa's most stable democratic governments. Repeated droughts during the second half of the 20th century caused significant hardship and prompted heavy emigration. As a result, Cabo Verde's expatriate population is greater than its domestic one. Most Cabo Verdeans have both African and Portuguese

antecedents.

Economy—overview: Cabo Verde’s economy is vulnerable to external shocks and depends on development aid, foreign investment, remittances, and tourism. The economy is service-oriented with commerce, transport, tourism, and public services accounting for about three-fourths of GDP. Tourism is the mainstay of the economy and depends on conditions in the eurozone countries. Cabo Verde annually runs a high trade deficit financed by foreign aid and remittances from its large pool of emigrants; remittances as a share of GDP are one of the highest in Sub-Saharan Africa.

Although about 40% of the population lives in rural areas, the share of food production in GDP is low. The island economy suffers from a poor natural resource base, including serious water shortages, exacerbated by cycles of long-term drought, and poor soil for growing food on several of the islands, requiring it to import most of what it consumes. The fishing potential, mostly lobster and tuna, is not fully exploited.

Economic reforms are aimed at developing the private sector and attracting foreign investment to diversify the economy and mitigate high unemployment. The government’s elevated debt levels have limited its capacity to finance any shortfalls.

Background: Most Cambodians consider themselves to be Khmers, descendants of the Angkor Empire that extended over much of Southeast Asia and reached its zenith between the 10th and 13th centuries. Attacks by the Thai and Cham (from present-day Vietnam) weakened the empire, ushering in a long period of decline. The king placed the country under French protection in 1863, and it became part of French Indochina in 1887. Following Japanese occupation in World War II, Cambodia gained full independence from France in 1953. In April 1975, after a seven-year struggle, communist Khmer Rouge forces captured Phnom Penh and evacuated all cities and towns. At least 1.5 million Cambodians died from execution, forced hardships, or starvation during the Khmer Rouge regime under POL POT. A December 1978 Vietnamese invasion drove the Khmer Rouge into the countryside, began a 10-year Vietnamese occupation, and touched off almost 13 years of civil war.

The 1991 Paris Peace Accords mandated democratic elections and a cease-fire, which was not fully respected by the Khmer Rouge. UN-sponsored elections in 1993 helped restore some semblance of normalcy under a coalition government. Factional fighting in 1997 ended the first coalition government, but a second round of national elections in 1998 led to the formation of another coalition government and renewed political stability. The remaining elements of the Khmer Rouge surrendered in early 1999. Some of the surviving Khmer Rouge leaders have been tried or are awaiting trial for crimes against humanity by a hybrid UN-Cambodian tribunal supported by international assistance. Elections in July 2003 were relatively peaceful, but it took one year of negotiations between contending political parties before a coalition government was formed. In October 2004, King Norodom SIHANOUK abdicated the throne and his son, Prince Norodom SIHAMONI, was selected to succeed him. The most recent local (Commune Council) elections were held in Cambodia in 2012, with little of the preelection violence that preceded prior elections. National elections in July 2013 were disputed, with the opposition—the Cambodian National Rescue Party (CNRP)—boycotting the National Assembly. The political impasse was ended nearly a year later, with the CNRP agreeing to enter parliament in exchange for ruling party commitments to electoral and legislative reforms.

Economy—overview: Cambodia has experienced strong economic growth over the last decade; GDP grew at an average annual rate of over 8% between 2000 and 2010 and at least 7% since 2011. The tourism, garment, construction and real estate, and agriculture sectors accounted for the bulk of growth. Around 600,000 people, the majority of whom are women, are employed in the garment and footwear sector. An additional 500,000 Cambodians are employed in the tourism sector, and a further 50,000 people in construction. Tourism has continued to grow rapidly with foreign arrivals exceeding 2 million per year since 2007 and reaching around 4.5 million visitors in 2014. Mining also is attracting some investor interest and the government has touted opportunities for mining bauxite, gold, iron and gems.

Cambodia remains one of the poorest countries in Asia and long-term economic development remains a daunting challenge, inhibited by endemic corruption, limited human resources, high income inequality, and poor job prospects. As of 2012, approximately 2.66 million people live on less than \$1.20 per Day, and 37% of Cambodian children under the age of 5 suffer from chronic malnutrition. More than 50% of the population is less than 25 years old. The population lacks education and productive skills, particularly in the impoverished countryside, which also lacks basic infrastructure.

The Cambodian Government has been working with bilateral and multilateral donors, including the Asian Development Bank, the World Bank and IMF, to address the country's many pressing needs; more than 30% of the government budget comes from donor assistance. A major economic challenge for Cambodia over the next decade will be fashioning an economic environment in which the private sector can create enough jobs to handle Cambodia's demographic imbalance.

Disputes—international: Cambodia is concerned about Laos' extensive upstream dam construction; Cambodia and Thailand dispute sections of boundary; in 2011 Thailand and Cambodia resorted to arms in the dispute over the location of the boundary on the precipice surmounted by Preah Vihear Temple ruins, awarded to Cambodia by ICJ decision in 1962 and part of a UN World Heritage site; Cambodia accuses Vietnam of a wide variety of illicit cross-border activities; progress on a joint development area with Vietnam is hampered by an unresolved dispute over sovereignty of offshore islands

Trafficking in persons: *current situation:* Cambodia is a source, transit, and destination country for men, women, and children subjected to forced labor and sex trafficking; Cambodian men, women, and children migrate to countries within the region and, increasingly, the Middle East for legitimate work but are subjected to sex trafficking, domestic servitude, or forced labor in fishing, agriculture, construction, and factories; Cambodian men recruited to work on Thai-owned fishing vessels are subsequently subjected to forced labor in international waters and are kept at sea for years; poor Cambodian children are vulnerable and, often with the families' complicity, are subject to forced labor, including domestic servitude and forced begging, in Thailand and Vietnam; Cambodian and ethnic Vietnamese women and girls are trafficked from rural areas to urban centers and tourist spots for sexual exploitation; Cambodian men are the main exploiters of child prostitutes, but men from other Asian countries, and the West travel to Cambodia for child sex tourism

tier rating: Tier 2 Watch List—Cambodia does not fully comply with the minimum standards for the elimination of trafficking; however, it is making significant efforts to do so; the government has a written plan that, if implemented, would constitute making significant efforts to meet the minimum standards for the elimination of trafficking; authorities made modest progress in prosecutions and convictions of traffickers in 2014 but did not provide comprehensive data; endemic corruption continued to impede law enforcement

efforts, and no complicit officials were prosecuted or convicted; the government sustained efforts to identify victims and refer them to NGOs for care, but victim protection remained inadequate, particularly for assisting male victims and victims identified abroad; a new national action plan was adopted, but guidelines for victim identification and guidance on undercover investigation techniques are still pending after several years (2015)

Illicit drugs: narcotics-related corruption reportedly involving some in the government, military, and police; limited methamphetamine production; vulnerable to money laundering due to its cash-based economy and porous borders

Background: French Cameroon became independent in 1960 as the Republic of Cameroon. The following year the southern portion of

neighboring British Cameroon voted to merge with the new country to form the Federal Republic of Cameroon. In 1972, a new constitution replaced the federation with a unitary state, the United Republic of Cameroon. The country has generally enjoyed stability, which has enabled the development of agriculture, roads, and railways, as well as a petroleum industry. Despite slow movement toward democratic reform, political power remains firmly in the hands of President Paul BIYA.

Economy—overview: Modest oil resources and favorable agricultural conditions provide Cameroon with one of the best-endowed primary commodity economies in Sub-Saharan Africa. Oil remains Cameroon’s main export commodity, and despite falling global oil prices, still accounts for nearly 40% of export earnings. Cameroon’s economy suffers from factors that often impact underdeveloped countries, such as stagnant per capita income, a relatively inequitable distribution of income, a top-heavy civil service, endemic corruption, continuing inefficiencies of a large parastatal system in key sectors, and a generally UN favorable climate for bu

siness en terprise.

Since 1990, the government has embarked on various IMF and World Bank programs designed to spur business investment, increase efficiency in agriculture, improve trade, and recapitalize the nation's banks. The IMF continues to press for economic reforms, including increased budget transparency, privatization, and poverty reduction programs. The Government of Cameroon provides subsidies for electricity, food, and fuel that have strained the federal budget and diverted funds from education, healthcare, and infrastructure projects, especially in 2015, as low oil prices have led to lower revenues. Cameroon devotes significant resources to several large infrastructure projects currently under construction, including a deep sea port in Kribi and the Lom Pangar Hydropower Project. Cameroon's energy sector continues to diversify, recently opening a natural gas powered electricity generating plant. Cameroon continues to seek foreign investment to improve its inadequate infrastructure, create jobs, and improve its economic footprint, but its unfavorable business environment remains a significant deterrent to foreign investment.

Background: A land of vast distances and rich natural resources, Canada became a self-governing dominion in 1867, while retaining ties to the British crown. Economically and technologically, the nation has developed in parallel with the US, its neighbor to the south across the world's longest international border. Canada faces the political challenges of meeting public demands for quality improvements in health care, education, social services, and economic competitiveness, as well as responding to the particular concerns of predominantly francophone Quebec. Canada also aims to develop its diverse energy resources while maintaining its commitment to the environment.

Natural hazards: continuous permafrost in north is a serious obstacle to development; cyclonic storms form east of the Rocky Mountains, a result of the mixing of air masses from the Arctic, Pacific, and North American interior, and produce most of the country's rain and snow east of the mountains

volcanism: the vast majority of volcanoes in Western Canada's Coast Mountains remain dormant

Environment—current issues: metal smelting, coal-burning utilities, and vehicle emissions impacting on agricultural and forest productivity; air pollution and resulting acid rain severely affecting lakes and damaging forests; ocean waters becoming contaminated due

to agricultural, industrial, mining, and forestry activities

Environment—international agreements: *party to:* Air Pollution, Air Pollution-Nitrogen Oxides, Air Pollution-Persistent Organic Pollutants, Air Pollution-Sulfur 85, Air Pollution-Sulfur 94, Antarctic-Environmental Protocol, Antarctic-Marine Living Resources, Antarctic Seals, Antarctic Treaty, Biodiversity, Climate Change, Desertification, Endangered Species, Environmental Modification, Hazardous Wastes, Law of the Sea, Marine Dumping, Ozone Layer Protection, Ship Pollution, Tropical Timber 83, Tropical Timber 94, Wetlands

lyrics/music: Adolphe-Basile ROUTHIER [French], Robert Stanley WEIR [English]/Calixa LAVALLEE

note: adopted 1980; originally written in 1880, “O Canada” served as an unofficial anthem many years before its official adoption; the anthem has French and English versions whose lyrics differ; as a Commonwealth realm, in addition to the national anthem, “God Save the Queen” serves as the royal anthem (see United Kingdom)

Economy—overview: As a high-tech industrial society in the trillion-dollar class, Canada resembles the US in its market-oriented economic system, pattern of production, and high living standards. Since World War II, the impressive growth of the manufacturing, mining, and service sectors has transformed the nation from a largely rural economy into one primarily industrial and urban. In addition, the country’s petroleum sector is rapidly expanding, because Alberta’s oil sands significantly boosted Canada’s proven oil reserves. Canada now ranks third in the world in proved oil reserves behind Venezuela and Saudi Arabia and is the world’s fifth -largest oil producer.

The 1989 US-Canada Free Trade Agreement and the 1994 North

American Free Trade Agreement (which includes Mexico) touched off a dramatic increase in trade and economic integration with the US, its principal trading partner. Canada enjoys a substantial trade surplus with the US, which absorbs about three-fourths of Canadian merchandise exports each year. Canada is the US's largest foreign supplier of energy, including oil, gas, and electric power, and a top source of US uranium imports. Given its abundant natural resources, highly skilled labor force, and modern capital plant, Canada enjoyed solid economic growth from 1993 through 2007. Buffeted by the global economic crisis, the economy dropped into a sharp recession in the final months of 2008, and Ottawa posted its first fiscal deficit in 2009 after 12 years of surplus. Canada's major banks, however, emerged from the financial crisis of 2008–09 among the strongest in the world, owing to the early intervention by the Bank of Canada and the financial sector's tradition of conservative lending practices and strong capitalization. Canada achieved marginal growth in 2010–15, despite the recent drop in oil prices.

Background: The Cayman Islands were colonized from Jamaica by the British during the 18th and 19th centuries and were administered by Jamaica after 1863. In 1959, the islands became a territory within the Federation of the West Indies. When the Federation dissolved in 1962, the Cayman Islands chose to remain a British dependency. The territory has transformed itself into a significant offshore financial center.

lyrics/music: Leila E. ROSS

note: adopted 1993; served as an unofficial anthem since 1930; as a territory of the United Kingdom, in addition to the local anthem, "God Save the Queen" is official (see United Kingdom)

Economy—overview: With no direct taxation, the islands are a thriving offshore financial center. More than 93,000 companies were registered in the Cayman Islands as of 2008, including almost 300 banks, 800 insurers, and 10,000 mutual funds. A stock exchange was opened in 1997. Nearly 90% of the islands' food and consumer goods must be imported. The Caymanians enjoy a standard of living comparable to that of Switzerland. Tourism is also a mainstay, accounting for about 70% of GDP and 75% of foreign currency earnings. The tourist industry is aimed at the luxury market and caters mainly to visitors from North America. Total tourist arrivals exceeded 1.9 million in 2008, with about half from the US.

Background: The former French colony of Ubangi-Shari became the Central African Republic upon independence in 1960. After three tumultuous decades of misrule—mostly by military governments—civilian rule was established in 1993 but lasted only a decade. In March 2003, President Ange-Felix PATASSE was deposed in a military coup led by General Francois BOZIZE, who established a transitional government. Elections held in 2005 affirmed General BOZIZE as president; he was reelected in 2011 in voting widely viewed as flawed. The government still lacks full control of the countryside, where lawlessness persists. The militant group, Lord's Resistance Army, continues to destabilize southeastern Central African Republic, and several rebel groups joined together in early December 2012 to launch a series of attacks that left them in control of numerous towns in the northern and central parts of the country. The rebels—unhappy with BOZIZE's government—participated in peace talks in early January 2013 which resulted in a coalition government including the rebellion's leadership. In March 2013, the coalition government

dissolved, rebels seized the capital, and President BOZIZE fled the country. Rebel leader Michel DJOTODIA assumed the presidency and the following month established a National Transitional Council (CNT). In January 2014, the CNT elected Catherine SAMBA-PANZA as interim president. Elections completed in March 2016 installed independent candidate Faustin-Archange TOUADERA as president.

Economy—overview: Subsistence agriculture, together with forestry and mining, remains the backbone of the economy of the Central African Republic (CAR), with about 60% of the population living in outlying areas. The agricultural sector generates more than half of GDP. Timber and diamonds account for most export earnings, followed by cotton. Important constraints to economic development include the CAR's landlocked geography, poor transportation system, largely unskilled work force, and legacy of misdirected macroeconomic policies. Factional fighting between the government and its opponents remains a drag on economic revitalization. Distribution of income is extraordinarily unequal. Grants from France and the international community can only partially meet humanitarian needs.

Since 2009, the IMF has worked closely with the government to institute reforms that have resulted in some improvement in budget transparency, but other problems remain. The government's additional spending in the run-up to the 2011 election worsened CAR's fiscal situation. In 2012, the World Bank approved \$125 million in funding for transport infrastructure and regional trade, focused on the route between CAR's capital and the port of Douala in Cameroon. After a two-year lag in donor support, the IMF's first review of CAR's extended credit facility for 2012–15 praised improvements in revenue collection but warned of weak management of spending.

Kimberley Process participants partially lifted the ban on diamond exports from the country in 2015, but persistent insecurity will prevent GDP from recovering to its pre-2013 level.

IDPs: 415,256 (clashes between army and rebel groups since 2005; tensions between ethnic groups) (2016)

Trafficking in persons: *current situation:* Central African Republic (CAR) is a source, transit, and destination country for children subjected to forced labor and sex trafficking, women subjected to forced prostitution, and adults subjected to forced labor; most victims appear to be CAR citizens exploited within the country, with a smaller number transported back forth between the CAR and nearby countries; armed groups operating in the CAR, including those aligned with the former Seleka government and the Lord's Resistance Army, continue to recruit and re-recruit children for military activities and labor; children are also subject to domestic servitude, commercial sexual exploitation, and forced labor in agriculture, mines, shops, and street vending; women and girls are subject to domestic servitude, sexual slavery, commercial sexual exploitation, and forced marriage

tier rating: Tier 3—the Central African Republic does not fully comply with the minimum standards for the elimination of trafficking and is not making significant efforts to do so; the government conducted a limited number of investigations and prosecutions of cases of suspected human trafficking in 2014 but did not identify, provide protection to, or refer to care providers any trafficking victims; the government did not directly provide reintegration programs for demobilized child soldiers, leaving victims vulnerable to further exploitation or re-trafficking by armed groups, including those affiliated with the government; in 2014, an NGO and the government began drafting a national action plan against trafficking but no efforts were reported to establish a policy against child soldiering or to raise awareness about existing laws prohibiting the use of children in the armed forces (2015)

Background: Chad, part of France's African holdings until 1960, endured three decades of civil warfare, as well as invasions by Libya, before peace was restored in 1990. The government eventually drafted a democratic constitution and held flawed presidential elections in 1996 and 2001. In 1998, a rebellion broke out in northern Chad, which has sporadically flared up despite several peace agreements between the government and insurgents. In June 2005, President Idriss DEBY held a referendum successfully removing constitutional term limits and won another controversial election in 2006. Sporadic rebel campaigns continued throughout 2006 and 2007. The capital experienced a significant insurrection in early 2008, but has had no significant rebel threats since then, in part due to Chad's 2010 rapprochement with Sudan, which previously used Chadian rebels as proxies. In late 2015, the government imposed a state of emergency in the Lake Chad region following multiple attacks by the terrorist group Boko Haram throughout the year; Boko Haram also launched several bombings in N'Djamena in mid-2015. DEBY in 2011 was reelected to his fourth term in an election that international observers described as proceeding without incident. In January 2014, Chad began a two-year rotation on the UN Security Council.

Geography—note: *note 1:* Chad is the largest of Africa's 16 landlocked countries

note 2: not long ago—geologically speaking—what is today the Sahara was green savannah teeming with wildlife; during the African Humid Period, roughly 11,000 to 5,000 years ago, a vibrant animal community, including elephants, giraffes, hippos, and antelope lived there; the last remnant of the “Green Sahara” exists in the Lakes of Ounianga (oo-nee-ahn-ga) in northern Chad, a series of 18 interconnected freshwater, saline, and hypersaline lakes now protected as a World Heritage site

note 3: Lake Chad, the most significant water body in the Sahel, is a remnant of a former inland sea, paleolake Mega-Chad; at its greatest

extent, sometime before 5000 B.C., Lake Mega-Chad was the largest of four Saharan paleolakes that existed during the African Humid Period; it covered an area of about 400,000 sq km (150,000 sq mi), roughly the size of today's Caspian Sea

Economy—overview: Chad’s landlocked location results in high transportation costs for imported goods and dependence on neighboring countries. Oil and agriculture are mainstays of Chad’s economy. Oil provides about 60% of export revenues, while cotton, cattle, livestock, and gum arabic provide the bulk of Chad’s non-oil export earnings. The services sector contributes about one-third of GDP and has attracted foreign investment mostly through telecommunications and banking.

Nearly all of Chad’s fuel is provided by one domestic refinery, and unanticipated shutdowns occasionally result in shortages. The country regulates the price of domestic fuel, providing an incentive for black market sales.

Chad’s fiscal position is encumbered by declining oil prices, though high oil prices and strong local harvests supported the economy in recent years. Chad relies on foreign assistance and foreign capital for much public and private sector investment. Chad’s investment climate remains challenging due to limited infrastructure, a lack of trained workers, extensive government bureaucracy, and corruption. Chad obtained a three-year extended credit facility from the IMF in 2014 and was granted debt relief under the Heavily Indebted Poor Countries Initiative in April 2015.

Background: Prior to the arrival of the Spanish in the 16th century, the Inca ruled northern Chile while the Mapuche inhabited central and southern Chile. Although Chile declared its independence in 1810, decisive victory over the Spanish was not achieved until 1818. In the War of the Pacific (1879–83), Chile defeated Peru and Bolivia and won its present northern regions. It was not until the 1880s that the Mapuche were brought under central government control. After a series of elected governments, the three-year-old Marxist government of Salvador ALLENDE was overthrown in 1973 by a military coup led by General Augusto PINOCHET, who ruled until a freely elected president was inaugurated in 1990. Sound economic policies, maintained consistently since the 1980s, contributed to steady growth, reduced poverty rates by over half, and helped secure the country's commitment to democratic and representative government. Chile has increasingly assumed regional and international leadership roles befitting its status as a stable, democratic nation.

Demographic profile: Chile is in the advanced stages of demographic transition and is becoming an aging society—with fertility below replacement level, low mortality rates, and life expectancy on par with developed countries. Nevertheless, with its dependency ratio nearing its low point, Chile could benefit from its favorable age structure. It will need to keep its large working-age population productively employed, while preparing to provide for the needs of its growing proportion of elderly people, especially as women—the traditional caregivers—increasingly enter the workforce. Over the last two decades, Chile has made great strides in reducing its poverty rate, which is now lower than most Latin American countries. However, its severe income inequality ranks as the worst among members of the Organization for Economic Cooperation and Development. Unequal access to quality education perpetuates this uneven income distribution. Chile has historically been a country of emigration but has slowly become more attractive to immigrants since transitioning to democracy in 1990 and improving its economic stability (other regional destinations have concurrently experienced deteriorating economic and political conditions). Most of Chile’s small

but growing foreign-born population consists of transplants from other Latin American countries, especially Peru.

Flag description: two equal horizontal bands of white (top) and red; a blue square the same height as the white band at the hoist-side end of the white band; the square bears a white five-pointed star in the center representing a guide to progress and honor; blue symbolizes the sky, white is for the snow-covered Andes, and red represents the blood spilled to achieve independence

note: design was influenced by the US flag

National symbol(s): huemul (mountain deer), Andean condor; national colors: red, white, blue

National anthem: *name:* “Himno Nacional de Chile” (National Anthem of Chile)

lyrics/music: Eusebio LILLO Robles and Bernardo DE VERA y Pintado/Ramon CARNICER y Battle

note: music adopted 1828, original lyrics adopted 1818, adapted lyrics adopted 1847; under Augusto PINOCHET’s military rule, a verse glorifying the army was added; however, as a protest, some citizens refused to sing this verse; it was removed when democracy was restored in 1990

Economy—overview: Chile has a market-oriented economy characterized by a high level of foreign trade and a reputation for strong financial institutions and sound policy that have given it the strongest sovereign bond rating in South America. Exports of goods and services account for approximately one-third of GDP, with commodities making up some 60% of total exports. Copper alone provides 20% of government revenue. From 2003 through 2013, real growth averaged almost 5% per year, despite the slight contraction in 2009 that resulted from the global financial crisis. Growth slowed to an estimated 2.3% in 2015. A continued drop in copper prices prompted Chile to experience its second consecutive year of slow growth, elevated inflation, and a depreciating currency. Chile deepened its longstanding commitment to trade liberalization with the signing of a free trade agreement with the US, which took effect on 1 January 2004. Chile has 22 trade agreements covering 60 countries including agreements with the EU, Mercosur, China, India, South Korea, and Mexico. In May 2010, Chile signed the OECD Convention, becoming the first South American country to join the OECD. In October 2015, Chile joined the US and 10 other countries and concluded negotiations on the Trans-Pacific Partnership trade agreement. The agreement will need to be ratified by the Chilean legislature. The Chilean Government has generally followed a countercyclical fiscal policy, accumulating surpluses in sovereign wealth funds during periods of high copper prices and economic growth, and generally allowing deficit spending only during periods of low copper prices and growth. As of 31 October 2015, those sovereign wealth funds—kept mostly outside the country and separate from Central Bank reserves—amounted to more than \$22.4 billion. Chile used these funds to finance fiscal stimulus packages during the 2009 economic downturn. In 2014, President Michelle BACHELET introduced tax reforms aimed at delivering her campaign promise to fight inequality and to provide access to education and health care. The reforms are expected to generate additional tax revenues equal to 3% of Chile's GDP, mostly by increasing corporate tax rates to OECD averages.

Disputes—international: Chile and Peru rebuff Bolivia's reactivated claim to restore the Atacama corridor, ceded to Chile in 1884, but Chile has offered instead unrestricted but not sovereign maritime access through Chile to Bolivian natural gas; Chile rejects Peru's unilateral legislation to change its latitudinal maritime boundary with Chile to an equidistance line with a southwestern axis favoring Peru; in October 2007, Peru took its maritime complaint with Chile to the ICJ; territorial claim in Antarctica (Chilean Antarctic Territory) partially overlaps Argentine and British claims; the joint boundary commission, established by Chile and Argentina in 2001, has yet to map and demarcate the delimited boundary in the inhospitable Andean Southern Ice Field (Campo de Hielo Sur)

Illicit drugs: transshipment country for cocaine destined for Europe and the region; some money laundering activity, especially through the Iquique Free Trade Zone; imported precursors passed on to Bolivia; domestic cocaine consumption is rising, making Chile a significant consumer of cocaine (2008)

Background: For centuries China stood as a leading civilization, outpacing the rest of the world in the arts and sciences, but in the 19th and early 20th centuries, the country was beset by civil unrest, major famines, military defeats, and foreign occupation. After World War II, the communists under MAO Zedong established an autocratic socialist system that, while ensuring China's sovereignty, imposed strict controls over everyday life and cost the lives of tens of millions of people. After 1978, MAO's successor DENG Xiaoping and other leaders focused on market-oriented economic development and by 2000 output had quadrupled. For much of the population, living standards have improved dramatically and the room for personal choice has expanded, yet political controls remain tight. Since the early 1990s, China has increased its global outreach and participation in international organizations.

Flag description: red with a large yellow five-pointed star and four smaller yellow five-pointed stars (arranged in a vertical arc toward the middle of the flag) in the upper hoist-side corner; the color red represents revolution, while the stars symbolize the four social classes—the working class, the peasantry, the urban petty bourgeoisie, and the national bourgeoisie (capitalists)—united under the Communist Party of China

National symbol(s): dragon; national colors: red, yellow

National anthem: *name:* “Yiyongjun Jinxingqu” (The March of the Volunteers)

lyrics/music: TIAN Han/NIE Er

note: adopted 1949; the anthem, though banned during the Cultural Revolution, is more commonly known as “Zhongguo Guoge” (Chinese National Song); it was originally the theme song to the 1935 Chinese movie, “Sons and Daughters in a Time of Storm”

Economy—overview: Since the late 1970s, China has moved from a closed, centrally planned system to a more market-oriented one that plays a major global role; in 2010, China became the world’s largest exporter. Reforms began with the phaseout of collectivized agriculture, and expanded to include the gradual liberalization of prices, fiscal decentralization, increased autonomy for state enterprises, growth of the private sector, development of stock markets and a modern banking system, and opening to foreign trade and investment. China has implemented reforms in a gradualist fashion. In recent years, China has renewed its support for state-owned enterprises in sectors considered important to “economic security,” explicitly looking to foster globally competitive industries. The restructuring of the economy and resulting efficiency gains have contributed to a more than tenfold increase in GDP since 1978. Measured on a purchasing power parity (PPP) basis that adjusts for price differences, China in 2015 stood as the largest economy in the world, surpassing the US in 2014 for the first time in modern history. Still, China’s per capita income is below the world average.

After keeping its currency tightly linked to the US dollar for years, China in July 2005 moved to an exchange rate system that references a basket of currencies. From mid-2005 to late 2008, cumulative

appreciation of the renminbi against the US dollar was more than 20%, but the exchange rate remained virtually pegged to the dollar from the onset of the global financial crisis until June 2010, when Beijing allowed resumption of a gradual appreciation. In 2015, the People's Bank of China announced it would continue to carefully push for full convertibility of the renminbi after the currency was accepted as part of the IMF's special drawing rights basket.

The Chinese Government faces numerous economic challenges including: (a) reducing its high domestic savings rate and correspondingly low domestic consumption; (b) facilitating higher-wage job opportunities for the aspiring middle class, including rural migrants and increasing numbers of college graduates; (c) reducing corruption and other economic crimes; and (d) containing environmental damage and social strife related to the economy's rapid transformation. Economic development has progressed further in coastal provinces than in the interior, and by 2014 more than 274 million migrant workers and their dependents had relocated to urban areas to find work. One consequence of population control policy is that China is now one of the most rapidly aging countries in the world. Deterioration in the environment—notably air pollution, soil erosion, and the steady fall of the water table, especially in the North—is another long-term problem. China continues to lose arable land: because of erosion and economic development. The Chinese government is seeking to add energy production capacity from sources other than coal and oil, focusing on nuclear and alternative energy development.

Several factors are converging to slow China's growth, including debt overhang from its credit-fueled stimulus program, industrial overcapacity, inefficient allocation of capital by state-owned banks, and the slow recovery of China's trading partners. The government's 13th Five-Year Plan, unveiled in November 2015, emphasizes continued economic reforms and the need to increase innovation and domestic consumption in order to make the economy less dependent in the future on fixed investments, exports, and heavy industry. However, China has made only marginal progress toward these rebalancing goals. The new government of President XI Jinping has signaled a greater willingness to undertake reforms that focus on China's long-term economic health, including giving the market a more decisive role in allocating resources. In 2014, China agreed to begin limiting carbon dioxide emissions by 2030.

international services are increasingly available for private use; unevenly distributed domestic system serves principal cities, industrial centers, and many towns; China continues to develop its telecommunications infrastructure; China in the summer of 2008 began a major restructuring of its telecommunications industry, resulting in the consolidation of its six telecom service operators to three, China Telecom, China Mobile, and China Unicom, each providing both fixed-line and mobile services

domestic: interprovincial fiber-optic trunk lines and cellular telephone systems have been installed; mobile-cellular subscribership is increasing rapidly; the number of Internet users exceeded 564 million by the end of 2012; a domestic satellite system with several earth stations is in place

international: country code—86; a number of submarine cables provide connectivity to Asia, the Middle East, Europe, and the US; satellite earth stations—7 (5 Intelsat—4 Pacific Ocean and 1 Indian Ocean; 1 Intersputnik—Indian Ocean region; and 1 Inmarsat—Pacific and Indian Ocean regions) (2012)

Broadcast media: all broadcast media are owned by, or affiliated with, the Communist Party of China or a government agency; no privately owned TV or radio stations; state-run Chinese Central TV, provincial, and municipal stations offer more than 2,000 channels; the Central Propaganda Department lists subjects that are off limits to domestic broadcast media with the government maintaining authority to approve all programming; foreign-made TV programs must be approved prior to broadcast

Radio broadcast stations: AM 369, FM 259, shortwave 45 (1998)

Disputes—international: continuing talks and confidence-building measures work toward reducing tensions over Kashmir that nonetheless remains militarized with portions under the de facto administration of China (Aksai Chin), India (Jammu and Kashmir), and Pakistan (Azad Kashmir and Northern Areas); India does not

recognize Pakistan's ceding historic Kashmir lands to China in 1964; China and India continue their security and foreign policy dialogue started in 2005 related to the dispute over most of their rugged, militarized boundary, regional nuclear proliferation, and other matters; China claims most of India's Arunachal Pradesh to the base of the Himalayas; lacking any treaty describing the boundary, Bhutan and China continue negotiations to establish a common boundary alignment to resolve territorial disputes arising from substantial cartographic discrepancies, the largest of which lie in Bhutan's northwest and along the Chumbi salient; Burmese forces attempting to dig in to the largely autonomous Shan State to rout local militias tied to the drug trade, prompts local residents to periodically flee into neighboring Yunnan Province in China; Chinese maps show an international boundary symbol off the coasts of the littoral states of the South China Seas, where China has interrupted Vietnamese hydrocarbon exploration; China asserts sovereignty over Scarborough Reef along with the Philippines and Taiwan, and over the Spratly Islands together with Malaysia, the Philippines, Taiwan, Vietnam, and Brunei; the 2002 Declaration on the Conduct of Parties in the South China Sea eased tensions in the Spratlys but is not the legally binding code of conduct sought by some parties; Vietnam and China continue to expand construction of facilities in the Spratlys and in March 2005, the national oil companies of China, the Philippines, and Vietnam signed a joint accord on marine seismic activities in the Spratly Islands;

China occupies some of the Paracel Islands also claimed by Vietnam and Taiwan; the Japanese-administered Senkaku Islands are also claimed by China and Taiwan; certain islands in the Yalu and Tumen rivers are in dispute with North Korea; North Korea and China seek to stem illegal migration to China by North Koreans, fleeing privations and oppression, by building a fence along portions of the border and imprisoning North Koreans deported by China; China and Russia have demarcated the once disputed islands at the Amur and Ussuri confluence and in the Argun River in accordance with their 2004 Agreement; China and Tajikistan have begun demarcating the revised boundary agreed to in the delimitation of 2002; the decade-long demarcation of the China-Vietnam land boundary was completed in 2009; citing environmental, cultural, and social concerns, China has reconsidered construction of 13 dams on the Salween River, but energy-starved Burma, with backing from Thailand, remains intent on building five hydro-electric dams downstream despite regional and international protests Chinese and Hong Kong authorities met in March 2008 to resolve ownership and use of lands recovered in Shenzhen River channelization, including 96-hectare Lok Ma Chau

Refugees and internally displaced persons: *refugees (country of origin):* 300,896 (Vietnam); undetermined (North Korea) (2014) IDPs: undetermined (2014)

Trafficking in persons: *current situation:* China is a source, transit, and destination country for men, women, and children subjected to sex trafficking and forced labor; Chinese adults and children are forced into prostitution and various forms of forced labor, including begging and working in brick kilns, coal mines, and factories; women and children are recruited from rural areas and taken to urban centers for sexual exploitation, often lured by criminal syndicates or gangs with fraudulent job offers; state-sponsored forced labor, where detainees work for up to four years often with no remuneration, continues to be a serious concern; Chinese men, women, and children also may be subjected to conditions of sex trafficking and forced labor worldwide, particularly in overseas Chinese communities; women and children are trafficked to China from neighboring countries, as well as Africa and the Americas, for forced labor and prostitution

tier rating: Tier 2 Watch List—China does not fully comply with the minimum standards for the elimination of trafficking; however, it is making significant efforts to do so; official data for 2014 states that 194 alleged traffickers were arrested and at least 35 were convicted, but the government's conflation of human trafficking with other crimes makes it difficult to assess law enforcement efforts to investigate and to prosecute trafficking offenses according to international law; despite reports of complicity, no government officials were investigated, prosecuted, or convicted for their roles in trafficking offenses; authorities did not adequately protect victims and did not provide the data needed to ascertain the number of victims identified or assisted or the services provided; the National People's Congress ratified a decision to abolish "reform through labor" in 2013, but some continued to operate as state-sponsored drug detention or "custody and education" centers that force inmates to perform manual labor; some North Korean refugees continued to be forcibly repatriated as illegal economic migrants, despite reports that some were trafficking victims (2015)

Illicit drugs: major transshipment point for heroin produced in the Golden Triangle region of Southeast Asia; growing domestic consumption of synthetic drugs, and heroin from Southeast and Southwest Asia; source country for methamphetamine and heroin chemical precursors, despite new regulations on its large chemical

industry; more people believed to be convicted and executed for drug offences than anywhere else in the world, according to NGOs (2008)

Backg round: Named in 1643 for the day of its discovery, the island was annexed and settlement began by the UK in 1888 with the discovery of the island's phosphate deposits. Following the Second World War, Christmas Island came under the jurisdiction of the new British Colony of Singapore. The island existed as a separate Crown colony from 1 January 1958 to 1 October 1958 when its transfer to Australian jurisdiction was finalized. That date is still celebrated on the first Monday in October as Territory Day. Almost two-thirds of the island has been declared a national park.

Backg round: There are 27 coral islands in the group. Captain William KEELING discovered the islands in 1609, but they remained uninhabited until the 19th century. From the 1820s to 1978, members of the CLUNIE-ROSS family controlled the islands and the copra produced from local coconuts. Annexed by the UK in 1857, the Cocos Islands were transferred to the Australian Government in 1955. Apart from North Keeling Island, which lies 30 kilometers north of the main group, the islands form a horseshoe-shaped atoll surrounding a lagoon. North Keeling Island was declared a national park in 1995 and is administered by Parks Australia. The population on the two inhabited islands generally is split between the ethnic Europeans on West Island and the ethnic Malays on Home Island.

Background: Colombia was one of the three countries that emerged from the collapse of Gran Colombia in 1830 (the others are Ecuador and Venezuela). A five-decade-long conflict between government forces and antigovernment insurgent groups, principally the Revolutionary Armed Forces of Colombia (FARC) heavily funded by the drug trade, escalated during the 1990s. More than 31,000 former paramilitaries had demobilized by the end of 2006 and the United Self Defense Forces of Colombia as a formal organization had ceased to function. In the wake of the paramilitary demobilization,

emerging criminal groups arose, whose members include some former paramilitaries. The insurgents lack the military or popular support necessary to overthrow the government, but continue attacks against civilians. Large areas of the countryside are under guerrilla influence or are contested by security forces. In November 2012, the Colombian Government started formal peace negotiations with the FARC aimed at reaching a definitive bilateral cease-fire and incorporating demobilized FARC members into mainstream society and politics. The Colombian Government has stepped up efforts to reassert government control throughout the country, and now has a presence in every one of its administrative departments. Despite decades of internal conflict and drug related security challenges, Colombia maintains relatively strong democratic institutions characterized by peaceful, transparent elections and the protection of civil liberties.

Demographic profile: Colombia is in the midst of a demographic transition resulting from steady declines in its fertility, mortality, and population growth rates. The birth rate has fallen from more than 6 children per woman in the 1960s to just above replacement level today as a result of increased literacy, family planning services, and urbanization. However, income inequality is among the worst in the world, and more than a third of the population lives below the poverty line.

Colombia experiences significant legal and illegal economic emigration and refugee flows. Large-scale labor emigration dates to the 1960s; Venezuela and the United States continue to be the main host countries. Colombia is the largest source of Latin American refugees in Latin America, nearly 400,000 of whom live primarily in Venezuela and Ecuador. Forced displacement remains prevalent because of violence among guerrillas, paramilitary groups, and Colombian security forces. Afro-Colombian and indigenous populations are disproportionately affected. A leading NGO estimates that 5.2 million people have been displaced since 1985, while the Colombian Government estimates 3.6 million since 2000. These estimates may undercount actual numbers because not all internally displaced persons are registered. Historically, Colombia also has one of the world's highest levels of forced disappearances. About 30,000 cases have been recorded over the last four decades—although the number is likely to be much higher -including human rights activists, trade unionists, Afro-Colombians, indigenous people, and farmers in rural conflict zones.

Flag description: three horizontal bands of yellow (top, double-width), blue, and red; the flag retains the three main colors of the banner of Gran Colombia, the short-lived South American republic that broke up in 1830; various interpretations of the colors exist and include: yellow for the gold in Colombia's land, blue for the seas on its shores, and red for the blood spilled in attaining freedom; alternatively, the colors have been described as representing more elemental concepts such as sovereignty and justice (yellow), loyalty and vigilance (blue), and valor and generosity (red); or simply the principles of liberty, equality, and fraternity

note: similar to the flag of Ecuador, which is longer and bears the Ecuadorian coat of arms superimposed in the center

National symbol(s): Andean condor; national colors: yellow, blue, red

National anthem: *name:* “Himno Nacional de la Republica de Colombia” (National Anthem of the Republic of Colombia)

lyrics/music: Rafael NUNEZ/Oreste SINDICI

note: adopted 1920; the anthem was created from an inspirational poem written by President Rafael NUNEZ

Economy—overview: Colombia's consistently sound economic policies and aggressive promotion of free trade agreements in recent years have bolstered its ability to weather external shocks. Colombia depends heavily on energy and mining exports, making it vulnerable to a drop in commodity prices. Colombia is the world's fourth largest coal exporter and Latin America's fourth largest oil producer. Economic development is stymied by inadequate infrastructure, inequality, poverty, narcotrafficking and an uncertain security situation. Declining oil prices have resulted in a drop in government

revenues. In 2014, Colombia passed a tax reform bill to offset the lost revenue from the global drop in oil prices. The SANTOS administration is also using tax reform to help finance implementation of a peace deal between FARC and the government. Colombian officials estimate a peace deal may bolster economic growth by up to 2%.

Despite austerity measures put in place by the SANTOS administration, GDP and foreign direct investment fell in 2015, while the El Nino weather phenomenon caused food and energy prices to rise, with inflation spiking to 6.8%. In order to combat inflation, the Central Bank raised interest rates four times during the last four months of 2015, ending the year with a 25 basis point increase to 5.75%. Unemployment has continued to decrease and hit a record low of 8.9% in 2015, but the rate is still one of Latin America's highest. Nevertheless, Colombia's GDP growth rate makes it the region's best performer among large economies in 2015.

Real GDP growth averaged 4.8% per year from 2010–2014, continuing a decade of strong economic performance, before dropping in 2015. All three major ratings agencies upgraded Colombia's government debt to investment grade in 2013 and 2014, which helped to attract record levels of investment, mostly in the hydrocarbons sector. However, Standard & Poor's downgraded its long-term outlook from stable to negative in early 2016. The change, due largely to falling government revenues, could cause Colombia to lose its investment-grade bond status.

The SANTOS Administration's foreign policy has focused on bolstering Colombia's commercial ties and boosting investment at home. Colombia has signed or is negotiating Free Trade Agreements (FTA) with more than a dozen countries; the US-Colombia FTA went into force in May 2012. The US and Colombia have benefitted from the FTA, but Colombia's ability to take full advantage of its enhanced access to American markets continues to be constrained by lack of export diversification. Nontariff measures remain a point of contention for bilateral trade relations. Truck scrappage regulation, and restrictions on liquor, pharmaceutical, and ethanol imports are top irritants in the bilateral trade relationship. Colombia is a founding member of the Pacific Alliance—a regional trade block formed in 2012 by Chile, Colombia, Mexico, and Peru to promote regional trade and economic integration. In 2013, Colombia began its accession process to the OECD.

world's leading coca cultivator with 83,000 hectares in coca cultivation in 2011, a 17% decrease over 2010, producing a potential of 195 mt of pure cocaine; the world's largest producer of coca derivatives; supplies cocaine to nearly all of the US market and the great majority of other international drug markets; in 2012, aerial eradication dispensed herbicide to treat over 100,549 hectares combined with manual eradication of 30,486 hectares; a significant portion of narcotics proceeds are either laundered or invested in Colombia through the black market peso exchange; important supplier of heroin to the US market; opium poppy cultivation is estimated to have fallen to 1,100 hectares in 2009 while pure heroin production declined to 2.1 mt; most Colombian heroin is destined for the US market (2013)

Background: The archipelago of the Comoros in the Indian Ocean, composed of the islands of Mayotte, Anjouan, Moheli, and Grand Comore declared independence from France on 6 July 1975. France did not recognize the independence of Mayotte, which remains under French administration. Since independence, Comoros has endured political instability through realized and attempted coups. In 1997, the islands of Anjouan and Moheli declared independence from Comoros. In 1999, military chief Col. AZALI Assoumani seized power of the entire government in a bloodless coup; he initiated the 2000 Fomboni Accords, a power-sharing agreement in which the federal presidency rotates among the three islands, and each island maintains its local government. AZALI won the 2002 federal presidential election as president from Grand Comore Island, and each island in the archipelago elected its president. AZALI stepped down in 2006 and President SAMBI was elected to office as president from Anjouan. In 2007, Mohamed BACAR effected Anjouan's de-facto secession from the Union of Comoros, refusing to step down when Comoros' other islands held legitimate elections in July. The African Union (AU) initially attempted to resolve the political crisis by applying sanctions and a naval blockade to Anjouan, but in March 2008 the AU and Comoran soldiers seized the island. The island's inhabitants generally welcomed the move. In May 2011, Ikililou DHOININE won the presidency in peaceful elections widely deemed to be free and fair. Former President AZALI Assoumani was declared the winner of the closely contested 2016 presidential election.

Economy—overview: One of the world's poorest countries, Comoros is made up of three islands that are hampered by inadequate transportation links, a young and rapidly increasing population, and few natural resources. The low educational level of the labor force contributes to a subsistence level of economic activity and a heavy dependence on foreign grants and technical assistance. Agriculture, including fishing, hunting, and forestry, accounts for 50% of GDP, employs 80% of the labor force, and provides most of the exports. Export income is heavily reliant on the three main crops of vanilla, cloves, and ylang-ylang; and Comoros' export earnings are easily disrupted by disasters such as fires and extreme weather. Despite agriculture's importance to the economy, the country imports roughly 70% of its food; rice, the main staple, accounts for the bulk of imports.

Authorities are negotiating with the IMF for triennial program assistance. The government—which is racked by internal political disputes—is struggling to provide basic services, upgrade education and technical training, privatize commercial and industrial enterprises, improve health services, diversify exports, promote tourism, and reduce the high population growth rate. Recurring political instability, sometimes initiated from outside the country, has inhibited growth. Remittances from about 200,000 Comorans contribute about 25% of the country's GDP. In December 2012, IMF and the World Bank's International Development Association supported \$176 million in debt relief for Comoros, resulting in a 59% reduction of its future external debt service over a period of 40 years. In late 2013, a US-based investment company invested \$200 million in a project to explore for hydrocarbons in Comoran territorial waters, the largest financial investment in the country's history.

Military branches: National Army for Development (l'Armee Nationale de Developpement, AND): Comoran Security Force (also called Comoran Defense Force (Force Comorienne de Defense, FCD), includes Gendarmerie), Comoran Coast Guard, Comoran Federal Police (2015)

Military service age and obligation: 18 years of age for 2-year voluntary male and female military service; no conscription (2015)

Disputes—international: claims French-administered Mayotte and challenges France's and Madagascar's claims to Banc du Geyser, a drying reef in the Mozambique Channel; in May 2008, African Union forces assisted the Comoros military recapture Anjouan Island from rebels who seized it in 2001

Trafficking in persons: *current situation:* Comoros is a source country for children subjected to forced labor and, reportedly, sex trafficking domestically, and women and children are subjected to forced labor in Mayotte; it is possibly a transit and destination country for Malagasy women and girls and a transit country for East African

women and girls exploited in domestic service in the Middle East; Comoran children are forced to labor in domestic service, roadside and street vending, baking, fishing, and agriculture; some Comoran students at Koranic schools are exploited for forced agricultural or domestic labor, sometimes being subjected to physical and sexual abuse; Comoros may be particularly vulnerable to transnational trafficking because of inadequate border controls, government corruption, and the presence of international criminal networks

tier rating: Tier 3—Comoros does not fully comply with the minimum standards for the elimination of trafficking and was placed on Tier 3 after being on the Tier 2 Watch List for two consecutive years without making progress; Parliament passed revisions to the penal code in 2014, including anti-trafficking provisions and enforcement guidelines, but these amendments have not yet been passed approved by the President and put into effect; a new child labor law was passed in 2015 prohibiting child trafficking, but existing laws do not criminalize the forced prostitution of adults; authorities did not investigate, prosecute, or convict alleged trafficking offenders, including complicit officials; the government lacked victim identification and care referral procedures, did not assist any victims during 2014, and provided minimal support to NGOs offering victims psychosocial services (2015)

Background: Established as an official Belgian colony in 1908, the then-Republic of the Congo gained its independence in 1960, but its early years were marred by political and social instability. Col. Joseph MOBUTU seized power and declared himself president in a November 1965 coup. He subsequently changed his name—to MOBUTU Sese Seko—as well as that of the country—to Zaire. MOBUTU retained his position for 32 years through several sham elections, as well as through brutal force. Ethnic strife and civil war, touched off by a massive inflow of refugees in 1994 from fighting in Rwanda and Burundi, led in May 1997 to the toppling of the MOBUTU regime by a rebellion backed by Rwanda and Uganda and fronted by Laurent KABILA. He renamed the country the Democratic Republic of the Congo (DRC), but in August 1998 his regime was itself challenged by a second insurrection again backed by Rwanda and Uganda. Troops from Angola, Chad, Namibia, Sudan, and Zimbabwe intervened to support KABILA's regime. In January 2001, KABILA was assassinated and his son, Joseph KABILA, was named head of state. In

October 2002, the new president was successful in negotiating the withdrawal of Rwandan forces occupying the eastern DRC; two months later, the Pretoria Accord was signed by all remaining warring parties to end the fighting and establish a government of national unity. A transitional government was set up in July 2003; it held a successful constitutional referendum in December 2005 and elections for the presidency, National Assembly, and provincial legislatures took place in 2006.

In 2009, following a resurgence of conflict in the eastern DRC, the government signed a peace agreement with the National Congress for the Defense of the People (CNDP), a primarily Tutsi rebel group. An attempt to integrate CNDP members into the Congolese military failed, prompting their defection in 2012 and the formation of the M23 armed group—named after the 23 March 2009 peace agreements. Renewed conflict led to large population displacements and significant human rights abuses before the M23 was pushed out of DRC to Uganda and Rwanda in late 2013 by a joint DRC and UN offensive. In addition, the DRC continues to experience violence committed by other armed groups including the Democratic Forces for the Liberation of Rwanda, the Allied Democratic Forces, and assorted Mai Mai militias. In the most recent national elections, held in November 2011, disputed results allowed Joseph KABILA to be reelected to the presidency; the next presidential election is scheduled for late 2016.

Economy—overview: The economy of the Democratic Republic of the Congo—a nation endowed with vast natural resource wealth—is slowly recovering after decades of decline.

Systemic corruption since independence in 1960, combined with countrywide instability and conflict that began in the early-90s, has dramatically reduced national output and government revenue and increased external debt. With the installation of a transitional government in 2003 after peace accords, economic conditions slowly began to improve as the transitional government reopened relations with international financial institutions and international donors, and President KABILA began implementing reforms. Progress has been slow to reach the interior of the country although clear changes are evident in Kinshasa and Lubumbashi.

Renewed activity in the mining sector, the source of most export income, has boosted Kinshasa's fiscal position and GDP growth in recent years, although recent commodity price declines threaten to erase progress. An uncertain legal framework, corruption, and a lack of transparency in government policy are long-term problems for the large mining sector and for the economy as a whole.

The country marked its thirteenth consecutive year of positive economic expansion in 2015. Much economic activity still occurs in

the informal sector and is not reflected in GDP data. The DRC signed a Poverty Reduction and Growth Facility with the IMF in 2009 and received \$12 billion in multilateral and bilateral debt relief in 2010, but the IMF at the end of 2012 suspended the last three payments under the loan facility—worth \$240 million—because of concerns about the lack of transparency in mining contracts. In 2012, the DRC updated its business laws by adhering to OHADA, the Organization for the Harmonization of Business Law in Africa.

Disputes—international: heads of the Great Lakes states and UN pledged in 2004 to abate tribal, rebel, and militia fighting in the region, including northeast Congo, where the UN Organization Mission in the Democratic Republic of the Congo (MONUC), organized in 1999, maintains over 16,500 uniformed peacekeepers; members of Uganda's Lords Resistance Army forces continue to seek refuge in Congo's Garamba National Park as peace talks with the Uganda Government evolve; the location of the boundary in the broad Congo River with the Republic of the Congo is indefinite except in the Pool Malebo/Stanley Pool area; Uganda and DRC dispute Rukwanzi Island in Lake Albert and other areas on the Semliki River with hydrocarbon potential; boundary commission continues discussions over Congolese-administered triangle of land on the right bank of the Lunkinda River claimed by Zambia near the DRC village of Pweto; DRC accuses Angola of shifting monuments

Refugees and internally displaced persons: *refugees (country of origin):* 38,028 (Rwanda) (2014); 112,775 (Central African Republic); 32,657 (Burundi) (2016)

IDPs: 1,555,112 (fighting between government forces and rebels since mid-1990s; most IDPs are in eastern provinces) (2015)

Trafficking in persons: *current situation:* The Democratic Republic of the Congo is a source, destination, and possibly a transit country for men, women, and children subjected to forced labor and sex trafficking; the majority of this trafficking is internal, and much of it is perpetrated by armed groups and rogue government forces outside official control in the country's unstable eastern provinces; Congolese adults are subjected to forced labor, including debt bondage, in unlicensed mines, and women may be forced into prostitution; Congolese women and girls are subjected to forced marriages where they are vulnerable to domestic servitude or sex trafficking, while children are forced to work in agriculture, mining, mineral smuggling, vending, portering, and begging; Congolese women and children migrate to countries in Africa, the Middle East, and Europe where some are subjected to forced prostitution, domestic servitude, and forced labor in agriculture and diamond mining; indigenous and foreign armed groups, including the Lord's Resistance Army, abduct and forcibly recruit Congolese adults and children to serve as laborers, porters, domestics, combatants, and sex slaves; some elements of the Congolese national army (FARDC) also forced adults to carry supplies, equipment, and looted goods, but no cases of the

FARDC recruiting child soldiers were reported in 2014—a significant change

tier rating: Tier 2 Watch List—The Democratic Republic of the Congo does not fully comply with the minimum standards for the elimination of trafficking; however, it is making significant efforts to do so; the government took significant steps to hold military and police officials complicit in human trafficking accountable with convictions for sex slavery and arrests of armed group commanders for the recruitment and use of child soldiers; the government appears to have ceased the recruitment of child soldiers through the implementation of a UN-backed action plan; little effort was made to address labor and sex trafficking crimes committed by persons other than officials, or to identify the victims, or to provide or refer the victims to care services; awareness of various forms of trafficking is limited among law enforcement personnel and training and resources are inadequate to conduct investigations (2015)

Illicit drugs: one of Africa's biggest producers of cannabis, but mostly for domestic consumption; traffickers exploit lax shipping controls to transit pseudoephedrine through the capital; while rampant corruption and inadequate supervision leave the banking system vulnerable to money laundering, the lack of a well-developed financial system limits the country's utility as a money-laundering center (2008)

Background: Upon independence in 1960, the former French region of Middle Congo became the Republic of the Congo. A quarter century of experimentation with Marxism was abandoned in 1990 and a democratically elected government took office in 1992. A brief civil war in 1997 restored former Marxist President Denis SASSOU-Nguesso, and ushered in a period of ethnic and political unrest. Southern-based rebel groups agreed to a final peace accord in March 2003. The Republic of Congo is one of Africa's largest petroleum producers, but with declining production it will need new offshore oil finds to sustain its oil earnings over the long term.

Economy—overview: The economy is a mixture of subsistence farming and hunting, an industrial sector based largely on oil and support services, and government spending. Oil has supplanted forestry as the mainstay of the economy, providing a major share of government revenues and exports. Natural gas is increasingly being converted to electricity rather than being flared, greatly improving energy prospects. New mining projects, particularly iron ore, which entered production in late 2013, may add as much as \$1 billion to annual government revenue.

Economic reform efforts have been undertaken with the support of international organizations, notably the World Bank and the IMF, including the recently concluded Article IV consultations. The current administration faces difficult economic challenges of stimulating recovery and reducing poverty. The recent drop in oil prices has constrained government spending; lower oil prices forced the government to cut more than \$1 billion in planned spending. However, the government increased infrastructure spending for the September 2015 All-Africa Games and also ahead of the March 2016 presidential election, putting further pressure on the budget.

Officially the country became a net external creditor as of 2011, with external debt representing only about 16% of GDP and debt servicing less than 3% of government revenue.

Trafficking in persons: *current situation:* the Republic of the Congo is a source and destination country for children, men, and women, subjected to forced labor and sex trafficking; most trafficking victims are from Benin, the Democratic Republic of the Congo (DRC), and, to a lesser extent, other neighboring countries and are subjected to domestic servitude and market vending by West African and Congolese nationals; adults and children, the majority from the DRC, are also sex trafficked in Congo, mainly Brazzaville; internal trafficking victims, often from rural areas, are exploited as domestic servants or forced to work in quarries, bakeries, fishing, and agriculture

tier rating: Tier 2 Watch List—the Republic of the Congo does not

fully comply with the minimum standards for the elimination of trafficking; however, it is making significant efforts to do so; the country drafted an action plan based on anti-trafficking legislation, which remains pending in the Supreme Court; the government made minimal anti-trafficking law enforcement efforts in 2014, failing to prosecute or convict suspected traffickers from cases dating back to 2010; serious allegations of official complicity continue to be reported; the government lacks a systematic means of identifying victims and relies on NGOs and international organizations to identify victims and NGOs and foster families to provide care to victims; the quality of care varied widely because the foster care system was allegedly undermined by inadequate security and official complicity (2015)

Backg round: Named after Captain COOK, who sighted them in 1770, the islands became a British protectorate in 1888. By 1900, administrative control was transferred to New Zealand; in 1965, residents chose self-government in free association with New Zealand. The emigration of skilled workers to New Zealand, government deficits, and limited natural resources are of continuing concern.

Economy—overview: Like many other South Pacific island nations, the Cook Islands' economic development is hindered by the

isolation of the country from foreign markets, the limited size of domestic markets, lack of natural resources, periodic devastation from natural disasters, and inadequate infrastructure. Agriculture, employing more than one-quarter of the working population, provides the economic base with major exports of copra and citrus fruit. Black pearls are the Cook Islands' leading export. Manufacturing activities are limited to fruit processing, clothing, and handicrafts. Trade deficits are offset by remittances from emigrants and by foreign aid overwhelmingly from New Zealand. In the 1980s and 1990s, the country lived beyond its means, maintaining a bloated public service and accumulating a large foreign debt. Subsequent reforms, including the sale of state assets, the strengthening of economic management, the encouragement of tourism, and a debt restructuring agreement, have rekindled investment and growth.

Backg round: Scattered over more than three-quarters of a million square kilometers of ocean, the Coral Sea Islands were declared a territory of Australia in 1969. They are uninhabited except for a small meteorological staff on the Willis Islets. Automated weather stations, beacons, and a lighthouse occupy many other islands and reefs. The Coral Sea Islands Act 1969 was amended in 1997 to extend the boundaries of the Coral Sea Islands Territory around Elizabeth and Middleton Reefs.

Background: Although explored by the Spanish early in the 16th century, initial attempts at colonizing Costa Rica proved unsuccessful due to a combination of factors, including disease from mosquito-infested swamps, brutal heat, resistance by natives, and pirate raids. It was not until 1563 that a permanent settlement of Cartago was established in the cooler, fertile central highlands. The area remained a colony for some two and a half centuries. In 1821, Costa Rica became one of several Central American provinces that jointly declared their independence from Spain. Two years later it joined the United Provinces of Central America, but this federation disintegrated in 1838, at which time Costa Rica proclaimed its sovereignty and independence. Since the late 19th century, only two brief periods of violence have marred the country's democratic development. In 1949, Costa Rica dissolved its armed forces. Although it still maintains a large agricultural sector, Costa Rica has expanded its economy to include strong technology and tourism industries. The standard of living is relatively high. Land ownership is widespread.

Natural hazards: occasional earthquakes, hurricanes along Atlantic coast; frequent flooding of lowlands at onset of rainy season and landslides; active volcanoes

volcanism: Arenal (elev. 1,670 m), which erupted in 2010, is the most active volcano in Costa Rica; a 1968 eruption destroyed the town of Tabacon; Irazu (elev. 3,432 m), situated just east of San Jose, has the potential to spew ash over the capital city as it did between 1963 and 1965; other historically active volcanoes include Miravalles, Poas, Rincon de la Vieja, and Turrialba

Environment—current issues: deforestation and land use change, largely a result of the clearing of land for cattle ranching and agriculture; soil erosion; coastal marine pollution; fisheries protection; solid waste management; air pollution

Demographic profile: Costa Rica's political stability, high standard of living, and well-developed social benefits system set it apart from its Central American neighbors. Through the government's sustained social spending—almost 20% of GDP annually—Costa Rica has made tremendous progress toward achieving its goal of providing

universal access to education, healthcare, clean water, sanitation, and electricity. Since the 1970s, expansion of these services has led to a rapid decline in infant mortality, an increase in life expectancy at birth, and a sharp decrease in the birth rate. The average number of children born per women has fallen from about 7 in the 1960s to 3.5 in the early 1980s to below replacement level today. Costa Rica's poverty rate is lower than in most Latin American countries, but it has stalled at around 20% for almost two decades.

Costa Rica is a popular regional immigration destination because of its job opportunities and social programs. Almost 9% of the population is foreign-born, with Nicaraguans comprising nearly three-quarters of the foreign population. Many Nicaraguans who perform unskilled seasonal labor enter Costa Rica illegally or overstay their visas, which continues to be a source of tension. Less than 3% of Costa Rica's population lives abroad. The overwhelming majority of expatriates have settled in the United States after completing a university degree or in order to work in a highly skilled field.

Flag description: five horizontal bands of blue (top), white, red (double width), white, and blue, with the coat of arms in a white elliptical disk placed toward the hoist side of the red band; Costa Rica retained the earlier blue-white-blue flag of Central America until 1848 when, in response to revolutionary activity in Europe, it was decided to incorporate the French colors into the national flag and a central red stripe was added; today the blue color is said to stand for the sky, opportunity, and perseverance, white denotes peace, happiness, and wisdom, while red represents the blood shed for freedom, as well as the generosity and vibrancy of the people

note: somewhat resembles the flag of North Korea; similar to the flag of Thailand but with the blue and red colors reversed

National symbol(s): yiguirro (clay-colored robin); national colors: blue, white, red

National anthem: *name:* “Himno Nacional de Costa Rica” (National Anthem of Costa Rica)

lyrics/music: Jose Maria ZELEDON Brenes/Manuel Maria GUTIERREZ

note: adopted 1949; the anthem’s music was originally written for an 1853 welcome ceremony for diplomatic missions from the US and UK; the lyrics were added in 1903

Economy—overview: Prior to the global economic crisis, Costa Rica enjoyed stable economic growth. The economy contracted in 2009 but resumed growth at about 4% per year in 2010–15. While traditional agricultural exports of bananas, coffee, sugar, and beef are still the backbone of commodity export trade, a variety of industrial and specialized agricultural products have broadened export trade in recent years. High value-added goods and services, including medical devices, have further bolstered exports. Tourism continues to bring in foreign exchange, as Costa Rica’s impressive biodiversity makes it a

key destination for ecotourism. Foreign investors remain attracted by the country's political stability and relatively high education levels, as well as the incentives offered in the free-trade zones; Costa Rica has attracted one of the highest levels of foreign direct investment per capita in Latin America. The US-Central American-Dominican Republic Free Trade Agreement (CAFTA-DR) entered into force on 1 January 2009 after significant delays within the Costa Rican legislature. CAFTA-DR has increased foreign direct investment in key sectors of the economy, including the insurance and telecommunications sectors. However, poor infrastructure, high energy costs, bureaucracy, weak investor protection, and legal uncertainty due to the difficulty of enforcing contracts and overlapping and at times conflicting responsibilities between agencies, remain impediments to greater competitiveness.

Costa Rica's economy also faces challenges due to a rising fiscal deficit, rising public debt, and relatively low levels of domestic revenue. Poverty has remained around 20–25% for nearly 20 years, and the strong social safety net that had been put into place by the government has eroded due to increased financial constraints on government expenditures. Unlike the rest of Central America, Costa Rica is not highly dependent on remittances, which in 2014 represented 1% of GDP. Immigration from Nicaragua has increasingly become a concern for the government. The estimated 300,000–500,000 Nicaraguans in Costa Rica, legally and illegally, are an important source of mostly unskilled labor, but also place heavy demands on the social welfare system.

Disputes—international: Costa Rica and Nicaragua regularly file border dispute cases over the delimitations of the San Juan River and the northern tip of Calero Island to the International Court of Justice (ICJ); in 2009, the ICJ ruled that Costa Rican vessels carrying out police activities could not use the river, but official Costa Rican vessels providing essential services to riverside inhabitants and Costa Rican tourists could travel freely on the river; in 2011, the ICJ provisionally ruled that both countries must remove personnel from the disputed area; in 2013, the ICJ rejected Nicaragua's 2012 suit to halt Costa Rica's construction of a highway paralleling the river on the grounds of irreparable environmental damage; in 2013, the ICJ, regarding the disputed territory, ordered that Nicaragua should refrain from dredging or canal construction and refill and repair damage caused by trenches connecting the river to the Caribbean and upheld its 2010 ruling that Nicaragua must remove all personnel; in early

2014, Costa Rica brought Nicaragua to the ICJ over offshore oil concessions in the disputed region

Refugees and internally displaced persons: *refugees (country of origin):* 16,623 (Colombia) (2014) stateless persons: 1,806 (2015)

Trafficking in persons: *current situation:* Costa Rica is a source, transit, and destination country for men, women, and children subjected to sex trafficking and forced labor; Costa Rican women and children, as well as those from Nicaragua, the Dominican Republic, and other Latin American countries, are sex trafficked in Costa Rica; child sex tourism is a particular problem with offenders coming from the US and Europe; men and children from Central America, including indigenous Panamanians, and Asia are exploited in agriculture, construction, fishing, and commerce; Nicaraguans transit Costa Rica to reach Panama, where some are subjected to forced labor or sex trafficking

tier rating: Tier 2 Watch List—Costa Rica does not fully comply with the minimum standards for the elimination of trafficking; however, it is making significant efforts to do so; anti-trafficking law enforcement efforts declined in 2014, with fewer prosecutions and no convictions and no actions taken against complicit government personnel; some officials conflated trafficking with smuggling, and authorities reported the diversion of funds to combat smuggling hindered anti-trafficking efforts; the government identified more victims than the previous year but did not make progress in ensuring that victims received adequate protective services; specialized services were limited and mostly provided by NGOs without government support, even from a dedicated fund for anti-trafficking efforts; victims services were virtually non-existent outside of the capital (2015)

Illicit drugs: transshipment country for cocaine and heroin from South America; illicit production of cannabis in remote areas; domestic cocaine consumption, particularly crack cocaine, is rising; significant consumption of amphetamines; seizures of smuggled cash in Costa Rica and at the main border crossing to enter Costa Rica from Nicaragua have risen in recent years (2008)

Background: Close ties to France following independence in 1960, the development of cocoa production for export, and foreign investment all made Cote d'Ivoire one of the most prosperous of the West African states but did not protect it from political turmoil. In December 1999, a military coup—the first ever in Cote d'Ivoire's history—overthrew the government. Junta leader Robert GUEI blatantly rigged elections held in late 2000 and declared himself the winner. Popular protest forced him to step aside and brought Laurent GBAGBO into power. Ivorian dissidents and disaffected members of the military launched a failed coup attempt in September 2002 that developed into a rebellion and then a civil war. The war ended in 2003 with a cease-fire that left the country divided with the rebels holding the north, the government the south, and peacekeeping forces a buffer zone between the two. In March 2007, President GBAGBO and former New Forces rebel leader Guillaume SORO signed an agreement in which SORO joined GBAGBO's government as prime minister and the two agreed to reunite the country by dismantling the

buffer zone, integrating rebel forces into the national armed forces, and holding elections. Difficulties in preparing electoral registers delayed balloting until 2010. In November 2010, Alassane Dramane OUATTARA won the presidential election over GBAGBO, but GBAGBO refused to hand over power, resulting in a five-month stand-off. In April 2011, after widespread fighting, GBAGBO was formally forced from office by armed OUATTARA supporters with the help of UN and French forces. Several thousand UN peacekeepers and several hundred French troops remain in Cote d'Ivoire to support the transition process. OUATTARA is focused on rebuilding the country's economy and infrastructure while rebuilding the security forces. GBAGBO is in The Hague awaiting trial for crimes against humanity.

Economy—overview: Cote d’Ivoire is heavily dependent on agriculture and related activities, which engage roughly two-thirds of the population. Cote d’Ivoire is the world’s largest producer and exporter of cocoa beans and a significant producer and exporter of coffee and palm oil. Consequently, the economy is highly sensitive to fluctuations in international prices for these products and in climatic conditions. Cocoa, oil, and coffee are the country’s top export revenue earners, but the country is also mining gold. Following the end of more than a decade of civil conflict in 2011, Cote d’Ivoire has experienced a boom in foreign investment and economic growth. In June 2012, the IMF and the World Bank announced \$4.4 billion in debt relief for Cote d’Ivoire under the Highly Indebted Poor Countries Initiative.

stateless persons: 700,000 (2015); *note*—many Ivoirians lack documentation proving their nationality, which prevent them from accessing education and healthcare; birth on Ivorian soil does not automatically result in citizenship; disputes over citizenship and the associated rights of the large population descended from migrants from neighboring countries is an ongoing source of tension and contributed to the country's 2002 civil war; some observers believe

the government's mass naturalizations of thousands of people over the last couple of years is intended to boost its electoral support base; the government in October 2013 acceded to international conventions on statelessness and in August 2013 reformed its nationality law, key steps to clarify the nationality of thousands of residents

Illicit drugs: illicit producer of cannabis, mostly for local consumption; utility as a narcotic transshipment point to Europe reduced by ongoing political instability; while rampant corruption and inadequate supervision leave the banking system vulnerable to money laundering, the lack of a developed financial system limits the country's utility as a major money-laundering center (2008)

Background: The lands that today comprise Croatia were part of the Austro-Hungarian Empire until the close of World War I. In 1918, the Croats, Serbs, and Slovenes formed a kingdom known after 1929 as Yugoslavia. Following World War II, Yugoslavia became a federal independent communist state under the strong hand of Marshal TITO. Although Croatia declared its independence from Yugoslavia in 1991, it took four years of sporadic, but often bitter, fighting before occupying Serb armies were mostly cleared from Croatian lands, along with a majority of Croatia's ethnic Serb population. Under UN supervision, the last Serb-held enclave in eastern Slavonia was returned to Croatia in 1998. The country joined NATO in April 2009 and the EU in July 2013.

Flag description: three equal horizontal bands of red (top), white, and blue—the Pan-Slav colors—superimposed by the Croatian coat of arms; the coat of arms consists of one main shield (a checkerboard of 13 red and 12 silver (white) fields) surmounted by five smaller shields that form a crown over the main shield; the five small shields represent five historic regions (from left to right): Croatia, Dubrovnik, Dalmatia, Istria, and Slavonia

note: the Pan-Slav colors were inspired by the 19th-century flag of Russia

National symbol(s): red-white checkerboard; national colors: red, white, blue

National anthem: *name:* “Lijepanasa domovino” (Our Beautiful Homeland)

lyrics/music: Antun MIHANOVIC/Josip RUNJANIN

note: adopted 1972; “Lijepa nasa domovino,” whose lyrics were written in 1835, served as an unofficial anthem beginning in 1891

Economy—overview: Though still one of the wealthiest of the former Yugoslav republics, Croatia’s economy suffered badly during the 1991-95 war. The country’s output during that time collapsed, and Croatia missed the early waves of investment in Central and Eastern Europe that followed the fall of the Berlin Wall. Between 2000 and 2007, however, Croatia’s economic fortunes began to improve with moderate but steady GDP growth between 4% and 6% led by a rebound in tourism and credit-driven consumer spending. Inflation over the same period remained tame and the currency, the kuna, stable.

Croatia experienced an abrupt slowdown in the economy in 2008 and has yet to recover; economic growth was stagnant or negative in each year since 2009. Difficult problems still remain including a stubbornly high unemployment rate, uneven regional development, and a challenging investment climate. Croatia continues to face reduced foreign investment.

On 1 July 2013, Croatia joined the EU, following a decade-long application process. Croatia will be a member of the European Exchange Rate Mechanism until it meets the criteria for joining the Economic and Monetary Union and adopts the euro as its currency. EU accession has increased pressure on the government to reduce Croatia’s relatively high public debt, which triggered the EU’s excessive deficit procedure for fiscal consolidation. Zagreb has cut spending since 2012, and the government also raised additional revenues through more stringent tax collection and by raising the value-added tax. The government has also sought to accelerate privatization of non-strategic assets, with mixed success.

Illicit drugs: transit point along the Balkan route for Southwest Asian heroin to Western Europe; has been used as a transit point for maritime shipments of South American cocaine bound for Western Europe (2008)

Background: The native Amerindian population of Cuba began to decline after the European discovery of the island by Christopher COLUMBUS in 1492 and following its development as a Spanish colony during the next several centuries. Large numbers of African slaves were imported to work the coffee and sugar plantations, and Havana became the launching point for the annual treasure fleets bound for Spain from Mexico and Peru. Spanish rule eventually provoked an independence movement and occasional rebellions that were harshly suppressed. US intervention during the Spanish-American War in 1898 assisted the Cubans in overthrowing Spanish rule. The Treaty of Paris established Cuban independence from Spain in 1898 and, following three-and-a-half years of subsequent US military rule, Cuba became an independent republic in 1902 after which the island experienced a string of governments mostly dominated by the military and corrupt politicians. Fidel CASTRO led a rebel army to victory in 1959; his authoritarian rule held the subsequent regime together for nearly five decades. He stepped down as president in February 2008 in favor of his younger brother Raul CASTRO. Cuba's communist revolution, with Soviet support, was exported throughout Latin America and Africa during the 1960s, 1970s, and 1980s.

The country faced a severe economic downturn in 1990 following the withdrawal of former Soviet subsidies worth \$4–6 billion annually. Cuba at times portrays the US embargo, in place since 1961, as the source of its difficulties. Illicit migration to the US—using homemade rafts, alien smugglers, air flights, or via the US's southern border—is a continuing problem. In FY 2014, the US Coast Guard interdicted 2,111 Cuban nationals at sea, the highest number since FY 2008. Also in FY 2014, 24,289 Cuban migrants presented themselves at various land border ports of entry throughout the US. As a result of efforts begun in December 2014 by President OBAMA to re-establish diplomatic relations with the Cuban government, which were severed in January 1961, the US and Cuba reopened embassies in their respective countries on 20 July 2015. Over the past decade, there has been growing communication with the Cuban Government to address national interests.

People—note: illicit emigration is a continuing problem; Cubans attempt to depart the island and enter the US using homemade rafts, alien smugglers, direct flights, or falsified visas; Cubans also use non-maritime routes to enter the US including direct flights to Miami and overland via the southwest border; the number of Cubans migrating to the US has surged since the beginning of improved US-Cuban relations in late December 2014

Flag description: five equal horizontal bands of blue (top, center, and bottom) alternating with white; a red equilateral triangle based on the hoist side bears a white, five-pointed star in the center; the blue bands refer to the three old divisions of the island: central, occidental, and oriental; the white bands describe the purity of the independence ideal; the triangle symbolizes liberty, equality, and fraternity, while the red color stands for the blood shed in the independence struggle; the white star, called La Estrella Solitaria (the Lone Star) lights the way to freedom and was taken from the flag of Texas

note: design similar to the Puerto Rican flag, with the colors of the bands and triangle reversed

National symbol(s): royal palm; national colors: red, white, blue

National anthem: *name:* “La Bayamesa” (The Bayamo Song)

lyrics/music: Pedro FIGUEREDO

note: adopted 1940; Pedro FIGUEREDO first performed “La Bayamesa” in 1868 during the Ten Years War against the Spanish; a leading figure in the uprising, FIGUEREDO was captured in 1870 and executed by a firing squad; just prior to the fusillade he is reputed to have shouted, “Morir por la Patria es vivir” (To die for the country is to live), a line from the anthem

Economy—overview: The government continues to balance the need for loosening its socialist economic system against a desire for firm political control. In April 2011, the government held the first Cuban Communist Party Congress in almost 13 years, during which leaders approved a plan for wide-ranging economic changes. Since then, the government has slowly and incrementally implemented

limited economic reforms, including allowing Cubans to buy electronic appliances and cell phones, stay in hotels, and buy and sell used cars. The government has cut state sector jobs as part of the reform process, and it has opened up some retail services to “self-employment,” leading to the rise of so-called “cuentapropistas” or entrepreneurs.

Approximately 476,000 Cuban workers are currently registered as self-employed.

The Cuban regime has updated its economic model to include permitting the private ownership and sale of real estate and new vehicles, allowing private farmers to sell agricultural goods directly to hotels, allowing the creation of non-agricultural cooperatives, adopting a new foreign investment law, and launching a “Special Development Zone” around the Mariel port.

Since late 2000, Venezuela has provided petroleum products to Cuba on preferential terms, supplying nearly 100,000 barrels per day. Cuba has been paying for the oil, in part, with the services of Cuban personnel in Venezuela, including some 30,000 medical professionals.

domestic: fixed-line density remains low at 10 per 100 inhabitants; mobile-cellular service expanding but remains only about 10 per 100 persons

international: country code—53; the ALBA-1 fiber-optic submarine cable links Cuba, Jamaica, and Venezuela; fiber-optic cable laid to but not linked to US network; satellite earth station—1 Intersputnik (Atlantic Ocean region) (2011)

Broadcast media: government owns and controls all broadcast media with private ownership of electronic media prohibited; government operates 4 national TV networks and many local TV stations; government operates 6 national radio networks, an international station, and many local radio stations; Radio-TV Marti is beamed from the US (2007)

Military service age and obligation: 17–28 years of age for compulsory military service; 2-year service obligation; both sexes subject to military service (2012)

Military—note: the collapse of the Soviet Union deprived the Cuban military of its major economic and logistic support and had a significant impact on the state of Cuban equipment; the army remains well trained and professional in nature; the lack of replacement parts for its existing equipment has increasingly affected operational capabilities (2013)

Disputes—international: US Naval Base at Guantanamo Bay is leased to US and only mutual agreement or US abandonment of the facility can terminate the lease

Trafficking in persons: *current situation*: Cuba is a source country for adults and children subjected to sex trafficking and forced labor; child sex trafficking and child sex tourism occur in Cuba, while some Cubans are forced into prostitution in South America and the Caribbean; allegations have been made that some Cubans have been forced or coerced to work at Cuban medical missions abroad; assessing the scope of trafficking within Cuba is difficult because of the lack of

information

tier rating: Tier 2 Watch List—Cuba does not fully comply with the minimum standards for the elimination of trafficking; however, it is making significant efforts to do so; Cuba's penal code does not criminalize all forms of human trafficking, but the government reported that it is in the process of amending its criminal code to comply with the 2000 UN TIP Protocol, to which it acceded in 2013; the government in 2014 prosecuted and convicted 13 sex traffickers and provided services to the victims in those cases but does not have shelters specifically for trafficking victims; the government did not recognize forced labor as a problem and took no action to address it; state media produced newspaper articles and TV and radio programs to raise public awareness about sex trafficking (2015)

Illicit drugs: territorial waters and air space serve as transshipment zone for US- and European-bound drugs; established the death penalty for certain drug-related crimes in 1999 (2008)

Background: Originally settled by Arawak Indians, Curacao was seized by the Dutch in 1634 along with the neighboring island of Bonaire. Once the center of the Caribbean slave trade, Curacao was hard hit economically by the abolition of slavery in 1863. Its prosperity (and that of neighboring Aruba) was restored in the early 20th century with the construction of the Isla Refineria to service the newly discovered Venezuelan oil fields. In 1954, Curacao and several other Dutch Caribbean possessions were reorganized as the Netherlands Antilles, part of the Kingdom of the Netherlands. In referenda in 2005 and 2009, the citizens of Curacao voted to become a self-governing country within the Kingdom of the Netherlands. The change in status became effective in October 2010 with the dissolution of the Netherlands Antilles.

Economy—overview: Most of Curacao’s GDP results from services. Tourism, petroleum refining and bunkering, offshore finance, and transportation and communications are the mainstays of this small island economy, which is closely tied to the outside world. Curacao has limited natural resources, poor soil, and inadequate water supplies, and budgetary problems complicate reform of the health and education systems. Although GDP grew only slightly during the past decade, Curacao enjoys a high per capita income and a well-developed infrastructure compared with other countries in the region.

Curacao has an excellent natural harbor that can accommodate large oil tankers, and the port of Willemstad hosts a free trade zone and a dry dock. Venezuelan state oil company PdVSA, under a contract in effect until 2019, leases the single refinery on the island from the government, directly employing some 1,000 people; most of the oil for the refinery is imported from Venezuela; most of the refined products are exported to the US and Asia. Almost all consumer and capital goods are imported, with the US, the Netherlands and Venezuela being the major suppliers.

The government is attempting to diversify its industry and trade and has signed an Association Agreement with the EU to expand business there. In 2013, the government implemented changes to the sales tax and reformed the public pension and health care systems, including increasing the sales tax from 5% to as high as 9% on some products, raising the age for public pension withdrawals to 65, and requiring citizens to pay higher premiums.

Background: A former British colony, Cyprus became independent in 1960 following years of resistance to British rule. Tensions between the Greek Cypriot majority and Turkish Cypriot minority came to a head in December when violence broke out in the capital of Nicosia. Despite the deployment of UN peacekeepers in sporadic intercommunal violence continued, forcing most Turkish Cypriots into enclaves throughout the island. In 1974, a Greek Government-sponsored attempt to overthrow the elected president of Cyprus was met by military intervention from Turkey, which soon controlled more than a third of the island. In 1983, the Turkish Cypriot administered area declared itself the “Turkish Republic of Northern Cyprus” (“TRNC”), but it is recognized only by Turkey. A UN-mediated agreement, the Annan Plan, failed to win approval by both communities in 2004. In February 2014, after a hiatus of nearly two years, the leaders of the two communities resumed formal discussions under UN auspices aimed at reuniting the divided island. Talks were suspended in October 2014, but resumed in earnest in May 2015 following the election of a new Turkish Cypriot “president.” The entire island entered the EU on 1 May 2004, although the EU acquis—the body of common rights and obligations—applies only to the areas under the internationally recognized government, and is suspended in the area administered by Turkish Cypriots. However, individual Turkish Cypriots able to document their eligibility for Republic of Cyprus citizenship legally enjoy the same rights accorded to other citizens of EU states.

Country name: *conventional long form:* Republic of Cyprus

conventional short form: Cyprus

local long form: Kypriaki Dimokratia/Kibris Cumhuriyeti

local short form: Kypros/Kibris

note: the Turkish Cypriot community, which administers the northern part of the island, refers to itself as the “Turkish Republic of Northern Cyprus” or “TRNC” (“Kuzey Kibris Turk Cumhuriyeti” or “KKTC”)

etymology: the derivation of the name “Cyprus” is unknown, but the extensive mining of copper metal on the island in antiquity gave rise to the Latin word “cuprum” for copper

Government type: Republic of Cyprus—presidential democracy; Turkish Republic of Northern Cyprus (self-declared)—semi-presidential democracy

note: a separation of the two main ethnic communities inhabiting the

island began following the outbreak of communal strife in 1963; this separation was further solidified when a Greek military-junta-supported coup attempt prompted the Turkish intervention in July 1974 that gave the Turkish Cypriots de facto control in the north; Greek Cypriots control the only internationally recognized government on the island; on 15 November 1983, then Turkish Cypriot “President” Rauf DENKTAS declared independence and the formation of a “Turkish Republic of Northern Cyprus” (“TRNC”), which is recognized only by Turkey

Flag description: white with a copper-colored silhouette of the island (the island has long been famous for its copper deposits) above two green crossed olive branches in the center of the flag; the

branches symbolize the hope for peace and reconciliation between the Greek and Turkish communities

note: the “Turkish Republic of Northern Cyprus” flag retains the white field of the Cyprus national flag but displays narrow horizontal red stripes positioned a small distance from the top and bottom edges between which are centered a red crescent and a red five-pointed star; the banner is modeled after the Turkish national flag but with the colors reversed

National symbol(s): Cypriot mouflon (wild sheep), white dove; national colors: blue, white

National anthem: *name:* “Ymnos eis tin Eleftherian” (Hymn to Liberty)

lyrics/music: Dionysios SOLOMOS/Nikolaos MANTZAROS

note: adopted 1960; Cyprus adopted the Greek national anthem as its own; the Turkish Cypriot community in Cyprus uses the anthem of Turkey

Economy—overview: The area of the Republic of Cyprus under government control has a market economy dominated by the service sector, which accounts for more than four-fifths of GDP. Tourism, financial services, shipping, and real estate have traditionally been the most important sectors. Cyprus has been a member of the EU since May 2004 and adopted the euro as its national currency in January 2008. During the first five years of EU membership, the Cyprus economy grew at an average rate of about 4%, with unemployment between 2004 and 2008 averaging about 4%. However, the economy tipped into recession in 2009 as the ongoing global financial crisis and resulting low demand hit the tourism and construction sectors. An overextended banking sector with excessive exposure to Greek debt added to the contraction. Cyprus’ biggest two banks were among the largest holders of Greek bonds in Europe and had a substantial presence in Greece through bank branches and subsidiaries. Following numerous downgrades of its credit rating, Cyprus lost access to international capital markets in May 2011. In July 2012, Cyprus became the fifth euro-zone government to request an economic bailout program from the European Commission, European Central Bank and the International Monetary Fund—known collectively as the “Troika.”

Shortly after the election of President Nikos ANASTASIADES in February 2013, Cyprus reached an agreement with the Troika on a \$13 billion bailout that resulted in losses on uninsured bank deposits. The bailout triggered a two-week bank closure and the imposition of

capital controls that remained partially in place until April 2015. Cyprus' two largest banks merged and the combined entity was recapitalized through conversion of some large bank deposits to shares and imposition of losses on bank bondholders. As with other EU countries, the Troika conditioned the bailout on passing financial and structural reforms and privatizing state-owned enterprises. Despite downsizing and restructuring, the Cypriot financial sector throughout 2015 remained burdened by the largest stock of non-performing loans in the eurozone, equal to nearly half of all loans. Since the bailout, Cyprus has received positive appraisals by the Troika and outperformed fiscal targets but has struggled to overcome political opposition to bailout-mandated legislation, particularly regarding privatizations. Cyprus emerged from recession in 2015 and its economy grew an estimated 1.6% for the year, setting a positive tone for the scheduled end of the bailout program in March 2016.

In October 2013, a US-Israeli consortium completed preliminary appraisals of hydrocarbon deposits in Cyprus' exclusive economic zone (EEZ), which revealed an estimated gross mean reserve of about 130 billion cubic meters. Though exploration continues in Cyprus' EEZ, no additional commercially exploitable reserves were identified during the exploratory drilling in 2014/2015. Developing offshore hydrocarbon resources remains a critical component of the government's economic recovery efforts, but development has been delayed as a result of regional developments and disagreements about exploitation methods.

Economy—overview: Even though the whole of the island is part of the EU, implementation of the EU “*acquis communautaire*” has been suspended in the area administered by Turkish Cypriots, known locally as the “Turkish Republic of Northern Cyprus” (“TRNC”), until political conditions permit the reunification of the island. The market-based economy of the “TRNC” is roughly one-fifth the size of its southern neighbor and is likewise dominated by the service sector with a large portion of the population employed by the government. In 2012—the latest year for which data are available—the services sector, which includes the public sector, trade, tourism, and education, contributed 58.7% to economic output. In the same year, light manufacturing and agriculture contributed 2.7% and 6.2%, respectively. Manufacturing is limited mainly to food and beverages, furniture and fixtures, construction materials, metal and non-metal products, textiles and clothing. The “TRNC” maintains few economic ties with the Republic of Cyprus outside of trade in construction materials. Since its creation, the “TRNC” has heavily relied on financial assistance from Turkey, which supports the “TRNC” defense, telecommunications, water and postal services. The Turkish Lira is the

preferred currency, though foreign currencies are widely accepted in business transactions. The “TRNC” remains vulnerable to the Turkish market and monetary policy because of its use of the Turkish Lira. The “TRNC” weathered the European financial crisis relatively unscathed—compared to the Republic of Cyprus—because of the lack of financial sector development, the health of the Turkish economy, and its separation from the rest of the island. The “TRN C” economy experienced growth estimated at 2.8% in 2013 and 2.3% in 2014 and is projected to grow 3.8% in 2015.

Background: At the close of World War I, the Czechs and Slovaks of the former Austro-Hungarian Empire merged to form Czechoslovakia. During the interwar years, having rejected a federal system, the new country's predominantly Czech leaders were frequently preoccupied with meeting the increasingly strident demands of other ethnic minorities within the republic, most notably the Slovaks, the Sudeten Germans, and the Ruthenians (Ukrainians). On the eve of World War II, Nazi Germany occupied the territory that today comprises Czechia, and Slovakia became an independent state allied with Germany. After the war, a reunited but truncated Czechoslovakia (less Ruthenia) fell within the Soviet sphere of influence. In 1968, an invasion by Warsaw Pact troops ended the efforts of the country's leaders to liberalize communist rule and create "socialism with a human face," ushering in a period of repression known as "normalization." The peaceful "Velvet Revolution" swept the Communist Party from power at the end of 1989 and inaugurated a return to democratic rule and a market economy. On 1 January

1993, the country underwent a nonviolent “velvet divorce” into its two national components, the Czech Republic and Slovakia. The Czech Republic joined NATO in 1999 and the European Union in 2004. The country changed its short-form name to Czechia in 2016.

Economy—overview: Czechia is a stable and prosperous market economy that is closely integrated with the EU, especially since the country’s EU accession in 2004. The auto industry is the largest single industry, and, together with its upstream suppliers, accounts for nearly 24% of Czech manufacturing. Czechia produced more than a million cars for the first time in 2010, over 80% of which were exported. While the conservative, inward-looking Czech financial system has remained relatively healthy, the small, open, export-driven Czech economy remains sensitive to changes in the economic performance of its main export markets, especially Germany. When Western Europe and Germany fell into recession in late 2008, demand for Czech goods plunged, leading to double digit drops in industrial production and exports. As a result, real GDP fell sharply in 2009. The economy slowly recovered in the second half of 2009 and registered weak growth in the next two years. In 2012 and 2013, however, the economy fell into a recession again, due both to a slump in external demand in the EU and to the government’s austerity measures, returning to weak growth in 2014, and stronger growth in 2015.

Foreign and domestic businesses alike voice concerns about corruption, especially in public procurement. Other long term challenges include dealing with a rapidly aging population, funding an unsustainable pension and health care system, and diversifying away from manufacturing and toward a more high-tech, services-based, knowledge economy.

Flag description: red with a white cross that extends to the edges of the flag; the vertical part of the cross is shifted to the hoist side; the banner is referred to as the Dannebrog (Danish flag) and is one of the oldest national flags in the world; traditions as to the origin of the flag design vary, but the best known is a legend that the banner fell from the sky during an early-13th century battle; caught up by the Danish king before it ever touched the earth, this heavenly talisman inspired the royal army to victory; in actuality, the flag may derive from a crusa de banner or ensign

note: the shifted cross design element was subsequently adopted by the other Nordic countries of Finland, Iceland, Norway, and Sweden

National symbol(s): lion, mute swan; national colors: red, white

National anthem: *name:* “Der er et yndigt land” (There is a Lovely Land); “Kong Christian” (King Christian)

lyrics/music: Adam Gottlob OEHLENSCHLAGER/Hans Ernst KROYER; Johannes EWALD/unknown

note: Denmark has two national anthems with equal status; “Der er et yndigt land, “adopted 1844, is a national anthem, while “Kong

Christian, “adopted 1780, serves as both a national and royal anthem; “Kong Christian” is also known as “Kong Christian stod ved højen mast” (King Christian Stood by the Lofty Mast) and “Kongesangen” (The King’s Anthem); within Denmark, the royal anthem is played only when royalty is present and is usually followed by the national anthem; when royalty is not present, only the national anthem is performed; outside Denmark, the royal anthem is played, unless the national anthem is requested

Economy—overview: This thoroughly modern market economy features a high-tech agricultural sector, advanced industry with world-leading firms in pharmaceuticals, maritime shipping and renewable energy, and a high dependence on foreign trade. Denmark is a net exporter of food, oil, and gas and enjoys a comfortable balance of payments surplus, but depends on imports of raw materials for the manufacturing sector. Danes enjoy a high standard of living and the Danish economy is characterized by extensive government welfare measures and an equitable distribution of income. An aging population will be a major long-term issue. Denmark is a member of the EU; Danish legislation and regulations conform to EU standards on almost all issues. Despite previously meeting the criteria to join the European Economic and Monetary Union, Denmark has negotiated an opt-out with the EU and is not required to adopt the euro. Within the EU, Denmark is among the strongest supporters of trade liberalization.

After a long consumption-driven upswing, Denmark’s economy began slowing in 2007 with the end of a housing boom. Housing prices dropped markedly in 2008–09 but, with significant regional differences, have since recovered. Household indebtedness is still relatively high at more than 305% of net disposable income in 2014, while household net worth—from private pension schemes and other assets—amounted to 546% of net disposable income. The global financial crisis exacerbated this cyclical slowdown by increasing domestic borrowing costs and lowering foreign demand for Danish exports. Denmark maintained a healthy budget surplus for many years up to 2008, but the budget balance swung into deficit in 2009. The structural budget deficit has remained below 1% and is estimated at -0.4% in 2016. Denmark is experiencing a lackluster economic recovery, having still not regained the GDP level of 2008. GDP contracted in 2012 and 2013, followed by real growth of 1.3% in 2014, and 1.2% in 2015. The government projects 1.9% growth in 2016, while private sector estimates are about 1% growth. A historically low level of unemployment rose with the economic downturn but the labor market has strengthened since 2013, and

unemployment stood at about 4.5% in early 2016, based on the national measure. Productivity growth was significantly below the OECD average in 2012–2014.

Military—note: defense is the responsibility of the UK; includes Dhekelia Garrison and Ayios Nikolaos Station connected by a roadway

Background: The French Territory of the Afars and the Issas became Djibouti in 1977. Hassan Gouled APTIDON installed an authoritarian one-party state and proceeded to serve as president until 1999. Unrest among the Afar minority during the 1990s led to a civil war that ended in 2001 with a peace accord between Afar rebels and the Somali Issa-dominated government. In 1999, Djibouti's first multiparty presidential election resulted in the election of Ismail Omar GUELLEH as president; he was reelected to a second term in 2005 and

extended his tenure in office via a constitutional amendment, which allowed him to begin a third term in 2011. Djibouti occupies a strategic geographic location at the intersection of the Red Sea and the Gulf of Aden and serves as an important shipping portal for goods entering and leaving the east African highlands and transshipments between Europe, the Middle East, and Asia. The government holds longstanding ties to France, which maintains a significant military presence in the country, and has strong ties with the US. Djibouti hosts several thousand members of US armed services at US-run Camp Lemonnier.

Economy—overview: Djibouti’s economy is based on service activities connected with the country’s strategic location as a deepwater port on the Red Sea. Three-fourths of Djibouti’s inhabitants live in the capital city; the remainder are mostly nomadic herders. Scant rainfall and less than 4% arable land: limits crop production to small quantities of fruits and vegetables, and most food must be imported. Djibouti provides services as both a transit port for the region and an international transshipment and refueling center. Imports, exports, and re-exports—primarily of coffee from landlocked neighbor Ethiopia—represent 70% of port activity at Djibouti’s container terminal.

Djibouti has few natural resources and little industry. The nation is, therefore, heavily dependent on foreign assistance to help support its balance of payments and to finance development projects. An official unemployment rate of nearly 50%—with youth unemployment near 80%—continues to be a major problem. Inflation declined to 3% in 2014 due to low international food prices and a decline in electricity tariffs. Djibouti’s reliance on diesel-generated electricity and imported food and water leave average consumers vulnerable to global price

shocks, though in mid-2015 Djibouti passed new legislation to liberalize the energy sector. The government has emphasized infrastructure development for transportation and energy and Djibouti—with the help of foreign partners—has begun to increase and modernize its port capacity.

Telephone system: *general assessment:* telephone facilities in the city of Djibouti are adequate, as are the microwave radio relay connections to outlying areas of the country

domestic: Djibouti Telecom is the sole provider of telecommunications services and utilizes mostly a microwave radio relay network; fiber-optic cable is installed in the capital; rural areas connected via wireless local loop radio systems; mobile cellular coverage is primarily limited to the area in and around Djibouti city

international: country code—253; landing point for the SEA-ME-WE-3 and EASSy fiber-optic submarine cable systems providing links to Asia, the Middle East, Europe and North America; satellite earth stations—2 (1 Intelsat—Indian Ocean and 1 Arabsat); Medarabtel regional microwave radio relay telephone network (2009)

Broadcast media: state-owned Radiodiffusion-Television de Djibouti operates the sole terrestrial TV station, as well as the only 2 domestic radio networks; no private TV or radio stations; transmissions of several international broadcasters are available (2007)

Transportation—note: while attacks continued to decrease, with only 4 in 2014, the International Maritime Bureau reports offshore waters in the Gulf of Aden remain a high risk for piracy; the presence of several naval task forces in the Gulf of Aden and additional anti-piracy measures on the part of ship operators, including the use of on-board armed security teams, contributed to the drop in incidents

Military branches: Djibouti Armed Forces (Forces Armees Djiboutiennes, FAD): Djibouti National Army (includes Navy, Djiboutian Air Force (Force Aerieenne Djiboutienne, FAD), National Gendarmerie (GN)) (2013)

Military service age and obligation: 18 years of age for voluntary military service; 16–25 years of age for voluntary military training; no conscription (2012)

Disputes—international: Djibouti maintains economic ties and border accords with “Somaliland” leadership while maintaining some political ties to various factions in Somalia; Kuwait is chief investor in the 2008 restoration and upgrade of the Ethiopian-Djibouti rail link; in 2008, Eritrean troops moved across the border on Ras Doumera peninsula and occupied Doumera Island with undefined sovereignty in the Red Sea

Refugees and internally displaced persons: *refugees*

(*country of origin*): 12,363 (Somalia) (2015); 19,636 (Yemen) (2016)

Trafficking in persons: *current situation:* Djibouti is a transit, source, and destination country for men, women, and children subjected to forced labor and sex trafficking; economic migrants from East Africa en route to Yemen and other Middle East locations are vulnerable to exploitation in Djibouti; some women and girls may be forced into domestic servitude or prostitution after reaching Djibouti City, the Ethiopia-Djibouti trucking corridor, or Obock—the main crossing point into Yemen; Djiboutian and foreign children may be forced to beg, to work as domestic servants, or to commit theft and other petty crimes

tier rating: Tier 2 Watch List—Djibouti does not fully comply with the minimum standards for the elimination of trafficking; however, it is making significant efforts to do so; in 2014, Djibouti was granted a waiver from an otherwise required downgrade to Tier 3 because its government has a written plan that, if implemented would constitute making significant efforts to bring itself into compliance with the minimum standards for the elimination of trafficking; one forced labor trafficker was convicted in 2014 but received a suspended sentence inadequate to deter trafficking; authorities did not investigate or prosecute any other forced labor crimes, any sex trafficking offenses, or any officials complicit in human trafficking, and remained limited in their ability to recognize or protect trafficking victims; official round-ups, detentions, and deportations of non-Djiboutian residents, including children without screening for trafficking victims remained routine; the government did not provide care to victims but supported local NGOs operating centers that assisted victims (2015)

Background: Dominica was the last of the Caribbean islands to be colonized by Europeans due chiefly to the fierce resistance of the native Caribs. France ceded possession to Great Britain in 1763, which colonized the island in 1805. In 1980, two years after independence, Dominica's fortunes improved when a corrupt and tyrannical administration was replaced by that of Mary Eugenia CHARLES, the first female prime minister in the Caribbean, who remained in office for 15 years. Some 3,000 Carib Indians still living on Dominica are the only pre-Columbian population remaining in the eastern Caribbean.

Economy—overview: The Dominican economy has been dependent on agriculture—primarily bananas—in years past, but increasingly has been driven by tourism as the government seeks to promote Dominica as an “ecotourism” destination. Moreover, Dominica has an offshore medical education sector. In order to diversify the island’s economy, the government is also attempting to foster an offshore financial industry and plans to sign agreements with the private sector to develop geothermal energy resources. In 2003, the government began a comprehensive restructuring of the economy—including the elimination of price controls, privatization of the state banana company, and tax increases—to address an economic and financial crisis and to meet IMF requirements. In 2009 and 2013, the economy contracted as a result of the global recession; growth remains anemic. Although public debt levels continue to exceed pre-recession levels, the debt burden declined from 78% of GDP in 2011 to approximately 70% in 2012.

Disputes—international: Dominica is the only Caribbean state to challenge Venezuela's sovereignty claim over Aves Island and joins the other island nations in challenging whether the feature sustains human habitation, a criterion under the UN Convention on the Law of the Sea, which permits Venezuela to extend its EEZ and

continental shelf claims over a large portion of the eastern Caribbean Sea

Illicit drugs: transshipment point for narcotics bound for the US and Europe; minor cannabis producer (2008)

Background: The Taino—indigenous inhabitants of Hispaniola prior to the arrival of the Europeans—divided the island into five chiefdoms and territories. Christopher COLUMBUS explored and claimed the island on his first voyage in 1492; it became a springboard for Spanish conquest of the Caribbean and the American mainland. In 1697, Spain recognized French dominion over the western third of the island, which in 1804 became Haiti. The

remainder of the island, by then known as Santo Domingo, sought to gain its own independence in 1821 but was conquered and ruled by the Haitians for 22 years; it finally attained independence as the Dominican Republic in 1844. In 1861, the Dominicans voluntarily returned to the Spanish Empire, but two years later they launched a war that restored independence in 1865. A legacy of unsettled, mostly non-representative rule followed, capped by the dictatorship of Rafael Leonidas TRUJILLO from 1930 to 1961. Juan BOSCH was elected president in 1962 but was deposed in a military coup in 1963. In 1965, the US led an intervention in the midst of a civil war sparked by an uprising to restore BOSCH. In 1966, Joaquin BALAGUER defeated BOSCH in the presidential election. BALAGUER maintained a tight grip on power for most of the next 30 years when international reaction to flawed elections forced him to curtail his term in 1996. Since then, regular competitive elections have been held in which opposition candidates have won the presidency. Former President Leonel FERNANDEZ Reyna (first term 1996–2000) won election to a new term in 2004 following a constitutional amendment allowing presidents to serve more than one term, and was later reelected to a second consecutive term. In 2012, Danilo M EDINA Sanchez became president; he was reelected in 2016.

Flag description: a centered white cross that extends to the edges divides the flag into four rectangles—the top ones are blue (hoist side) and red, and the bottom ones are red (hoist side) and blue;

a small coat of arms featuring a shield supported by a laurel branch (left) and a palm branch (right) is at the center of the cross; above the shield a blue ribbon displays the motto, DIOS, PATRIA, LIBERTAD (God, Fatherland, Liberty), and below the shield, REPUBLICA DOMINICANA appears on a red ribbon; in the shield a bible is opened to a verse that reads “Y la verdad nos hara libre” (And the truth shall set you free); blue stands for liberty, white for salvation, and red for the blood of heroes

National symbol(s): palmchat (bird); national colors: red, white, blue

National anthem: *name:* “Himno Nacional” (National Anthem)

lyrics/music: Emilio PRUD’HOMME/Jose REYES

note: adopted 1934; also known as “Quisqueyanos valientes” (Valient Sons of Quisqueye); the anthem never refers to the people as Dominican but rather calls them “Quisqueyanos,” a reference to the indigenous name of the island

Economy—overview: The Dominican Republic has long been viewed primarily as an exporter of sugar, coffee, and tobacco, but in recent years the service sector has overtaken agriculture as the economy’s largest employer, due to growth in construction, tourism, and free trade zones. The mining sector has also played a greater role in the export market since late 2012 with the commencement of the extraction phase of the Pueblo Viejo Gold and Silver mine. The country suffers from marked income inequality; the poorest half of the population receives less than one-fifth of GDP, while the richest 10% enjoys nearly 40% of GDP. High unemployment, a large informal sector, and underemployment remain important long-term challenges. The economy is highly dependent upon the US, the destination for approximately half of exports. Remittances from the US amount to about 7% of GDP, equivalent to about a third of exports and two-thirds of tourism receipts. The Central America-Dominican Republic Free Trade Agreement (CAFTA-DR) came into force in March 2007, boosting investment and exports and reducing losses to the Asian garment industry. The Dominican Republic’s economy rebounded from the global recession in 2010–15, and the fiscal situation is improving. A tax reform package passed in November 2012, a reduction in government spending, and lower energy costs helped to narrow the central government budget deficit from 6.6% of GDP in 2012 to 2.6% in 2015. A liability management operation in January 2015, in which the government paid down over \$4 billion of the country’s Petrocaribe debt at a discount of 52% with proceeds from

the sale of \$2.5 billion in global bonds, reduced the country's debt load by approximately by 4% of GDP. Analysts project 6% GDP growth in 2016 and inflation within the Central Bank's target of 4.0% 1.0%, due to low oil prices, increased remittances, and continued expansion in the services sector based on growth in construction.

Background: What is now Ecuador formed part of the northern Inca Empire until the Spanish conquest in 1533. Quito became a seat of Spanish colonial government in 1563 and part of the Viceroyalty of New Granada in 1717. The territories of the Viceroyalty—New Granada (Colombia), Venezuela, and Quito—gained their independence between 1819 and 1822 and formed a federation known as Gran Colombia. When Quito withdrew in 1830, the traditional name was changed in favor of the “Republic of the Equator.” Between 1904 and 1942, Ecuador lost territories in a series of conflicts with its neighbors. A border war with Peru that flared in 1995 was resolved in 1999. Although Ecuador marked 30 years of civilian governance in 2004, the period was marred by political instability. Protests in Quito

contributed to the mid-term ouster of three of Ecuador's last four democratically elected presidents. In late 2008, voters approved a new constitution, Ecuador's 20th since gaining independence. General elections were held in February 2013, and voters reelected President Rafael CORREA.

Demographic profile: Ecuador's high poverty and income inequality most affect indigenous, mixed race, and rural populations. The government has increased its social spending to ameliorate these problems, but critics question the efficiency and implementation of its national development plan. Nevertheless, the conditional cash transfer program, which requires participants' children to attend school and have medical check-ups, has helped improve educational attainment and healthcare among poor children. Ecuador is stalled at above replacement level fertility and the population most likely will keep growing rather than stabilize. An estimated 2 to 3 million Ecuadorians live abroad, but increased unemployment in key receiving countries—Spain, the United States, and Italy—is slowing emigration and increasing the likelihood of returnees to Ecuador. The first large-scale emigration of Ecuadorians occurred between 1980 and 2000, when an economic crisis drove Ecuadorians from southern provinces to New York City, where they had trade contacts. A second, nationwide wave of emigration in the late 1990s was caused by another economic downturn, political instability, and a currency crisis. Spain was the logical destination because of its shared language and the wide availability of low-skilled, informal jobs at a time when increased border surveillance made illegal migration to the US difficult. Ecuador has a small but growing immigrant population and is Latin America's top recipient of refugees; 98% are neighboring Colombians fleeing violence in their country.

Economy—overview: Ecuador is substantially dependent on its petroleum resources, which have accounted for more than half of the country’s export earnings and approximately 25% of public sector revenues in recent years. In 1999/2000, Ecuador’s economy suffered from a banking crisis, with GDP contracting by 5.3% and poverty increasing significantly. In March 2000, the Congress approved a series of structural reforms that also provided for the adoption of the US dollar as legal tender. Dollarization stabilized the economy, and positive growth returned in the years that followed, helped by high oil prices, remittances, and increased non-traditional exports. The economy grew an average of 4.3% per year from 2002 to 2006, the highest five-year average in 25 years. After moderate growth in 2007, the economy reached a growth rate of 6.4% in 2008, buoyed by high global petroleum prices and increased public sector investment. President Rafael CORREA Delgado, who took office in January 2007, defaulted in December 2008 on Ecuador’s sovereign debt, which, with a total face value of approximately US\$3.2 billion, represented about 30% of Ecuador’s public external debt. In May 2009, Ecuador bought back 91% of its “defaulted” bonds via an international reverse auction. Economic policies under the CORREA administration—for example, an announcement in late 2009 of its intention to terminate 13 bilateral investment treaties, including one with the US—have generated economic uncertainty and discouraged private investment. China has become Ecuador’s largest foreign lender since Quito defaulted in 2008, allowing the government to maintain a high rate of social spending; Ecuador contracted with the Chinese government for more than \$9.9 billion in forward oil sales, project financing, and budget support loan as of December 2013. The level of foreign investment in Ecuador continues to be one of the lowest in the region as a result of an unstable regulatory environment, weak rule of law, and the crowding-out effect of public investments. Faced with a 2013 trade deficit of \$1.1 billion, Ecuador erected technical barriers to trade in December 2013, causing tensions with its largest trading partners. Ecuador also decriminalized intellectual property rights

violations in February 2014. In March, 2015 Ecuador imposed tariff surcharges for 15 months from 5% to 45% on an estimated 32% of imports. In 2014, oil output increased slightly and production remained steady in 2015. In 2015, however, lower oil prices forced CORREA to cut the budget twice, and the government has considered further budget and subsidy cuts for 2016.

Background: The regularity and richness of the annual Nile River flood, coupled with semi-isolation provided by deserts to the east and west, allowed for the development of one of the world's great civilizations. A unified kingdom arose circa 3200 B.C., and a series of dynasties ruled in Egypt for the next three millennia. The last native dynasty fell to the Persians in 341 B.C., who in turn were replaced by the Greeks, Romans, and Byzantines. It was the Arabs who introduced Islam and the Arabic language in the 7th century and who ruled for the next six centuries. A local military caste, the Mamluks took control

about 1250 and continued to govern after the conquest of Egypt by the Ottoman Turks in 1517. Completion of the Suez Canal in 1869 elevated Egypt as an important world transportation hub. Ostensibly to protect its investments, Britain seized control of Egypt's government in 1882, but nominal allegiance to the Ottoman Empire continued until 1914. Partially independent from the UK in 1922, Egypt acquired full sovereignty from Britain in 1952. The completion of the Aswan High Dam in 1971 and the resultant Lake Nasser have altered the time-honored place of the Nile River in the agriculture and ecology of Egypt. A rapidly growing population (the largest in the Arab world), limited arable land, and dependence on the Nile all continue to overtax resources and stress society. The government has struggled to meet the demands of Egypt's population through economic reform and massive investment in communications and physical infrastructure. Inspired by the 2010 Tunisian revolution, Egyptian opposition groups led demonstrations and labor strikes countrywide, culminating in President Hosni MUBARAK's ouster. Egypt's military assumed national leadership until a new parliament was in place in early 2012; later that same year, Mohammed MORSI won the presidential election. Following often violent protests throughout the spring of 2013 against MORSI's government and the Muslim Brotherhood, the Egyptian Armed Forces intervened and removed MORSI from power in July 2013 and replaced him with interim president Adly MANSOUR. In January 2014, voters approved a new constitution by referendum and in May 2014 elected Abdel Fattah EL SISI president. Egypt elected a new legislature in December 2015, the first parliament since 2012.

Flag description: three equal horizontal bands of red (top), white, and black; the national emblem (a gold Eagle of Saladin facing the hoist side with a shield superimposed on its chest above a scroll bearing the name of the country in Arabic) centered in the white

band; the band colors derive from the Arab Liberation flag and represent oppression (black), overcome through bloody struggle (red), to be replaced by a bright future (white)

note: similar to the flag of Syria, which has two green stars in the white band, Iraq, which has an Arabic inscription centered in the white band, and Yemen, which has a plain white band

National symbol(s): golden eagle, white lotus; national colors: red, white, black

National anthem: *name:* “Bilady, Bilady, Bilady” (My Homeland, My Homeland, My Homeland)

lyrics/music: Younis-al QADI/Sayed DARWISH

note: adopted 1979; the current anthem, less militaristic than the previous one, was created after the signing of the 1979 peace treaty with Israel; Sayed DARWISH, commonly considered the father of modern Egyptian music, composed the anthem

Economy—overview: Occupying the northeast corner of the African continent, Egypt is bisected by the highly fertile Nile valley, where most economic activity takes place. Egypt’s economy was highly centralized during the rule of former President Gamal Abdel NASSER but opened up considerably under former Presidents Anwar EL-SADAT and Mohamed Hosni MUBARAK. Cairo from 2004 to 2008 pursued business climate reforms to attract foreign investment and facilitate growth. Poor living conditions and limited job opportunities for the average Egyptian contribute to public discontent, a major factor leading to the January 2011 revolution that ousted MUBARAK. The uncertain political, security, and policy environment since 2011 caused economic growth to slow significantly, hurting tourism, manufacturing, and other sectors and pushing up unemployment. Weak growth and limited foreign exchange earnings have made public finances unsustainable, leaving authorities dependent on expensive borrowing for deficit finance and on Gulf allies to help cover the import bill. In 2015, higher levels of foreign investment contributed to a slight rebound in GDP growth after a particularly depressed post-revolution period.

Trafficking in persons: *current situation:* Egypt is a source, transit, and destination country for men, women, and children subjected to sex trafficking and forced labor; Egyptian children, including the large population of street children are vulnerable to forced labor in domestic service, begging and agriculture or may be victims of sex trafficking or child sex tourism, which occurs in Cairo, Alexandria, and Luxor; some Egyptian women and girls are sold into “temporary” or “summer” marriages with Gulf men, through the complicity of their parents or marriage brokers, and are exploited for prostitution or forced labor; Egyptian men are subject to forced labor in neighboring countries, while adults from South and Southeast Asia and East Africa—and increasingly Syrian refugees—are forced to work in domestic service, construction, cleaning, and begging in Egypt; women and girls, including migrants and refugees, from Asia, sub-Saharan Africa, and the Middle East are sex trafficked in Egypt; the Egyptian military cracked down on criminal group’s smuggling, abducting, trafficking, and extorting African migrants in the Sinai Peninsula, but the practice has reemerged in along Egypt’s western border with Libya

tier rating: Tier 2 Watch List—Egypt does not fully comply with the minimum standards for the elimination of trafficking; however, it is making significant efforts to do so; the government gathered data nationwide on trafficking cases to better allocate and prioritize anti-trafficking efforts, but overall it did not demonstrate increased progress; prosecutions increased in 2014, but no offenders were convicted for the second consecutive year; fewer trafficking victims were identified in 2014, which represents a significant and ongoing decrease from the previous two reporting periods; the government relied on NGOs and international organizations to identify and refer victims to protective services, and focused on Egyptian victims and refused to provide some services to foreign victims, at times including shelter (2015)

Illicit drugs: transit point for cannabis, heroin, and opium moving to Europe, Israel, and North Africa; transit stop for Nigerian drug couriers; concern as money laundering site due to lax enforcement of financial regulations

Background: El Salvador achieved independence from Spain in 1821 and from the Central American Federation in 1839. A 12-year civil war, which cost about 75,000 lives, was brought to a close in 1992 when the government and leftist rebels signed a treaty that provided for military and political reforms.

Demographic profile: El Salvador is the smallest and most densely populated country in Central America. It is well into its demographic transition, experiencing slower population growth, a decline in its number of youths, and the gradual aging of its population. The increased use of family planning has substantially lowered El Salvador's fertility rate, from approximately 6 children per woman in the 1970s to replacement level today. A 2008 national family planning survey showed that female sterilization remained the most common contraception method in El Salvador—its sterilization rate is among the highest in Latin America and the Caribbean—but that the use of injectable contraceptives is growing. Fertility differences between rich and poor and urban and rural women are narrowing.

Salvadorans fled during the 1979 to 1992 civil war mainly to the United States but also to Canada and to neighboring Mexico, Guatemala, Honduras, Nicaragua, and Costa Rica. Emigration to the United States increased again in the 1990s and 2000s as a result of deteriorating economic conditions, natural disasters (Hurricane Mitch in 1998 and earthquakes in 2001), and family reunification. At least 20% of El Salvador's population lives abroad. The remittances they send home account for close to 20% of GDP, are the second largest

source of external income after exports, and have helped reduce poverty.

Flag description: three equal horizontal bands of blue (top), white, and blue with the national coat of arms centered in the white band; the coat of arms features a round emblem encircled by the words REPUBLICA DE EN LA AMERICA CENTRAL; the banner is based on the former blue-white-blue flag of the Federal Republic of Central America; the blue bands symbolize the Pacific Ocean and the Caribbean Sea, while the white band represents the land between the two bodies of water, as well as peace and prosperity

note: similar to the flag of Nicaragua, which has a different coat of arms centered in the white band—it features a triangle encircled by the words REPUBLICA DENICARAGUA on top and AMERICA CENTRAL on the bottom; also similar to the flag of Honduras, which has five blue stars arranged in an X pattern centered in the white band

National symbol(s): turquoise-browed motmot (bird); national colors: blue, white

National anthem: *name:* “Himno Nacional de El Salvador” (National Anthem of El Salvador)

lyrics/music: Juan Jose CANAS/Juan ABERLE

note: officially adopted 1953, in use since 1879; at 4: 20 minutes the anthem of El Salvador is one of the world’s longest

Economy—overview: The smallest country in Central America geographically, El Salvador has the fourth largest economy in the region. With the global recession, real GDP contracted in 2009 and economic growth has since remained low, averaging less than 2% from 2010 to 2014, but recovered somewhat in 2015. Remittances accounted for 17% of GDP in 2014 and were received by about a third of all households. In 2006, El Salvador was the first country to ratify the Dominican Republic-Central American Free Trade Agreement, which has bolstered the export of processed foods, sugar, and ethanol, and supported investment in the apparel sector amid increased Asian competition. In September 2015, El Salvador kicked off a five-year \$277 million second compact with the Millennium Challenge Corporation—a US Government agency aimed at stimulating economic growth and reducing poverty—to improve El Salvador’s competitiveness and productivity in international markets. . The Salvadoran Government maintained fiscal discipline during post-war reconstruction and rebuilding following earthquakes in 2001 and hurricanes in 1998 and 2005, but El Salvador’s public debt, estimated at 65% of GDP in 2015, has been growing over the last several years.

Total external debt was nearly 60% of GDP in 2015.

Background: Equatorial Guinea gained independence in 1968 after 190 years of Spanish rule; it is one of the smallest countries in Africa consisting of a mainland territory and five inhabited islands. The capital of Malabo is located on the island of Bioko, approximately 25 km from the Cameroonian coastline in the Gulf of Guinea. Between 1968 and 1979, autocratic President Francisco MACIAS NGUEMA virtually destroyed all of the country's political, economic, and social institutions before being deposed by his nephew Teodoro OBIANG NGUEMA MBASOGO in a coup. President OBIANG has ruled since October 1979 and was reelected in 2016. Although nominally a constitutional democracy since 1991, presidential and legislative elections since 1996 have generally been labeled as flawed. The president exerts almost total control over the political system and has placed legal and bureaucratic barriers that prevent political opposition. Equatorial Guinea has experienced rapid economic growth due to the discovery of large offshore oil reserves, and in the last decade has become Sub-Saharan Africa's third largest oil exporter. Despite the country's economic windfall from oil production, resulting in a massive increase in government revenue in recent years, the drop in global oil prices has placed significant strain on the state budget. Equatorial Guinea continues to seek to diversify its economy and to increase foreign investment despite limited improvements in the population's living standards. Equatorial Guinea is the host of major regional and international conferences and continues to seek a greater role in regional affairs.

Economy—overvie: Exploitation of oil and gas deposits,

beginning in the 1990s, has driven economic growth in Equatorial Guinea, allowing per capita GDP to rise to over \$29,000 in 2014. Forestry and farming are minor components of GDP. Although preindependence Equatorial Guinea counted on cocoa production for hard currency earnings, the neglect of the rural economy since independence has diminished the potential for agriculture-led growth. Subsistence farming is the dominant form of livelihood. Declining revenue from hydrocarbon production, high levels of infrastructure expenditures, lack of economic diversification, and corruption have pushed the economy into decline in recent years and led to limited improvements in the general population's living conditions.

Foreign assistance programs by the World Bank and the IMF have been cut since 1993 because of corruption and mismanagement, and as a middle income country Equatorial Guinea is now ineligible for most donor assistance. The government has been widely criticized for its lack of transparency and misuse of oil revenues and has attempted to address this issue by working towards compliance with the Extractive Industries Transparency Initiative. US foreign assistance to Equatorial Guinea is limited in part because of US restrictions pursuant to the Trafficking Victims Protection Act. Equatorial Guinea hosted two economic diversification symposia in 2014 that focused on attracting investment in five sectors: agriculture and animal ranching, fishing, mining and petrochemicals, tourism, and financial services. Undeveloped mineral resources include gold, zinc, diamonds, columbite-tantalite, and other base metals.
